The Government Statistical Service

A service of statistical information and advice is provided to the Government by specialist staffs employed in the statistics division of individual Departments. Statistics are made generally available through their publications and further information and advice on them can be obtained from the Departments concerned.

Enquiries about statistics in this publication should be made to the Central Statistical Office, Great George Street, London SW1P 3AQ. Telephone 01-233 7255 OR 8398.

Enquiries about orders for Input-output tables for the United Kingdom 1972 should be made to the publishers, Her Majesty's Stationery Office, PO Box 569, London SE1 9NH. Telephone 01-928 6977.

London: Her Majesty's Stationery Office 1976

Preface

The tables in this volume are the third in a series of updated annual input-output tables which incorporate the results of the annual Censuses of Production carried out for each year since 1970(1). These publications update Input-output tables for the United Kingdom 1968 (2) which contained a detailed account of how those tables were constructed from the basic data and how they can be manipulated to reveal economic structures.

The major difference in methodology between the updated tables and those for 1968 is that the latter are based on the detailed industry inputs and outputs, analysed by commodity, provided by the comprehensive 1968 Census of Production. This formed a firm basis for the 1968 input-output analysis of commodity outputs (Table A, the Make matrix) and of commodity inputs (Table B, the Absorption matrix) and also provided a basis for the analysis of final demand by commodity (Tables O, P and Q).

No such detailed data on industry inputs and the commodities sold by industry are available from the annual Censuses of Production, which provide only total figures, for each Census industry, of inputs and outputs together with wages and salaries, fixed investment and stocks.

Hence, in order to estimate the industry input structure for 1972 shown in this volume (Table B, the Absorption matrix) the established RAS method has again been used, as it was in the construction of the tables for 1970 and 1971. Since the publication of these earlier updated tables the Central Statistical Office has completed tests designed to assess the reliability of this method. These tests consisted of applying the RAS method to the 1963 data to estimate the pattern of purchases in 1968 and then comparing the results with the actual figures for that year. The results show that, applied over the 5 year period, the RAS method produced large errors; for example 50 per cent of the entries larger than £10m in the predicted flow matrix were wrongly estimated by 25 per cent. Other factors, not attributable to the RAS method, contributed to these errors, and of course there must be some uncertainty as to whether the results are fully applicable to the subsequent updatings of the 1968 figures to the years 1970 to 1972. Moreover, attempts have been made to reduce the errors by "fixing" some cells by the use of actual data rather than estimating them by the RAS method; and, of course, the smaller size of the tables for 1971 and 1972 is itself likely to reduce the errors. There is, however, no alternative to using the RAS method for the greater part of the compilation process and users should be aware that the tables are likely to be subject to fairly large errors. The errors in the derived tables are likely to be smaller. It is hoped that a full description of the tests carried out on the tables for 1963 and 1968 will be published later this year.

To reduce the uncertainties of the results of updating, the 1971 and 1972 tables distinguish 59 industry/commodity groups compared with 90 groups for 1968 and 1970. However, because of its growing importance in the economy, the petroleum and natural gas industry is shown separately for 1971 and 1972. Copies of the 1970 input-output tables and Tables A, B and C of the 1968 study aggregated to 58 industries (petroleum and natural gas is not shown separately) are available in the form of punched cards or computer print-out. They can be obtained at cost from the Central Statistical Office at the address given on the inside of the front cover. A discussion of the problems of comparing data at varying levels of aggregation is included in the article in the April 1975 issue of Economic Trends (3).

Tables corresponding to Tables Q, S and T of the 1968 analysis are not included for 1970, 1971 or 1972 as they would be wholly dependent on the data for 1968.

The tables were compiled by the Central Statistical Office. The help of the Business Statistics Office and other Government departments is gratefully acknowledged.

Classification of industry/commodity groups	VII
Notes on the tables	VIII

The basic tables

A Commodity analysis of domestic output in 1972	2
B Commodity analysis of purchases from domestic production in 1972	10
C Commodity analysis of imports in 1972	20

Industry x industry tables

D Industry x industry flow matrix, 1972	32
E Total requirements per 1000 units of final industrial output in terms of gross output, 1972	42
F Total requirements per 1000 units of final industrial output in terms of net output, 1972	50
G Industrial output in terms of primary input in 1972, in coefficient form	58
H Industrial composition of final expenditure in terms of net output in 1972, in coefficient form	59
I The allocation of net output in 1972, in coefficient form	60
J Direct and indirect import and tax content of industrial output in 1972, in coefficient form	62

Commodity x commodity tables

K Commodity x commodity flow matrix, 1972	64
L Total requirements per 1000 units of domestic commodity output in terms of gross output, 1972	74
M Commodity x commodity intermediate imports flow matrix, 1972	82
N Total requirements of imported commodities per 1000 units of domestic output, 1972	90

Analyses of final demand

O Analysis of consumers' expenditure in 1972	100
P Analysis of public authorities' current expenditure in 1972	104
Q Analysis of gross domestic fixed capital formation in 1972	105

Classification of industry/commodity groups

The table below gives details of the composition and coverage of the industry/commodity groups shown in the tables. Each group is defined in terms of the Standard Industrial Classification, 1968.

	Industry/commodity group	Standard Industrial Classification 1968 Minimum List Heading
1	Agriculture	001
2	Forestry and fishing	002, 003
3	Coal mining	101
4	Petroleum and natural gas	104
5	Other mining and quarrying	102, 103, 109
6	Cereal products	211, 212, 213, 219
7	Sugar, cocoa, etc.	216, 217
8	Oils and fats	221
9	Other food products	214, 215, 218, 229, 232
10	Alcoholic drink	231, 239
11	Tobacco	240
12	Coke ovens and manufactured fuel	261
13	Mineral oil refining	262, 263
14	General chemicals, dyestuffs and fertilizers	271, 277, 278
15	Synthetic resins, plastics materials and synthetic rubber	276
16	Pharmaceutical chemicals, toilet preparations, soap and detergents	272, 273, 275
17	Other chemicals	274, 279
18	Iron castings, etc.	313
19	Other iron and steel	311, 312
20	Aluminium and aluminium alloys	321
21	Other non-ferrous metals	322, 323
22	Industrial plant and steelwork	341
23	Office machinery	338
24	Construction equipment and mechanical handling equipment	336, 337
25	Other mechanical engineering	331 to 335, 339, 342, 349
26	Instrument engineering	351 to 354
27	Electronics and telecommunications	363 to 367
28	Domestic electrical appliances	368
29	Electrical machinery, insulated wires and cables and other electrical goods	361, 362, 369
30	Shipbuilding	370
31	Wheeled tractors	380
32	Motor vehicles	381
33	Aerospace equipment	383
34	Other vehicles	382, 384, 385
35	Engineers' small tools	390
36	Wire and wire manufactures	394
37	Other metal goods	391, 392, 393, 395, 396, 399
38	Production of man-made fibres	411
39	Other textiles	412 to 419, 421, 422, 423, 429
40	Leather, leather goods and fur	431, 432, 433
41	Clothing	441 to 446, 449
42	Footwear	450
43	Building materials, etc.	461 to 464, 469
44	Timber and furniture, etc.	471 to 475, 479
45	Paper and board	481
46	Paper products, printing, publishing, etc.	482 to 489
47	Rubber	491
48	Plastic products n.e.s.	496
49	Other manufacturing	492 to 495, 499
50	Construction	500
51	Gas	601
52	Electricity	602
53	Water supply	603
54	Railways	701
55	Road transport	702, 703, 704
56	Other transport	705, 706, 707, 709
57	Communication	708
58	Distributive trades	810, 811, 812, 820, 821, 831, 832
59	Miscellaneous services	861, 862, 864 to 866, 871, 873, 876, 879, 881, 883 to 886, 889, 892 to 895, and parts of 860, 863, 872, 874, 882, 887, 888, 899
60	Public administration, domestic services, ownership of dwellings	875, 891, 901, 906 and parts of 860, 863, 872, 874, 882, 887, 888, 899

Notes on the tables

1 The national accounts aggregates in these input-output tables are consistent with the data for 1972 given in the Blue Book National Income and Expenditure 1964-1974'.

2 In the annual Censuses of Production a number of establishments previously included in the coke ovens industry have been unable to report separate figures and their activities have been included with those of their parent establishments under iron and steel. For this reason the output of the coke ovens industry in the updated input-output tables is less than that shown in the 1968 study and the iron and steel industry shows a much higher output of coke. A similar problem occurred but to a lesser degree in the mining and quarrying industry where certain establishments undertaking the mining of iron ore could no longer be identified separately and had to be classified to iron and steel. The inputs of these industries have been adjusted accordingly.

3 No information on purchases of goods for merchanting is available from the annual Census of Production. In the light of data derived from the 1968 study it was decided to assume for the updated tables a uniform margin of 15% of the value of sales for each industry within manufacturing, except for the tobacco industry where a zero margin appeared more appropriate.

4 The classification of imported goods to the input-output commodity groups is consistent with the industrial classification of imported goods published in the February 1975 issue of Economic Trends.

5 A full analysis of re-exports of commodities is not available for the years from 1970 and therefore in the updated tables many items imported for eventual re-export are included in the main body of the import matrix (Table C). Thus these items are treated as if purchased by industry for further processing, but this should not substantially distort the pattern of imports purchased by industry or through this the pattern of domestic purchases (which are obtained by subtraction). In a few cases where the item for re-export was very large (eg furs, blended tea and coffee, etc.) these purchases were added to the inputs and outputs of the miscellaneous services industry and shown as an export of the industry in Table B.

6 The analysis of consumers' expenditure given in Table O is consistent with the national accounts data at purchasers' prices. Because of the problems of balancing total output and total demand the distribution and service margins shown in Table O are to some extent derived as residual items and not too much importance should be attached to the fluctuations since 1968.

7 There was no detailed commodity survey of central government expenditure for the financial year 1972/73 and the analysis of central government expenditure given in Table P reflects the results of a survey for the financial year 1971/72.

8 The detailed analysis of capital formation (Table Q) is mainly based on the detailed pattern of commodity purchases shown in the Census of Production for 1968 although some use was made of the commodity data recorded in the Quarterly Inquiries into sales by industry. The plant and machinery elements of this table may be particularly liable to fluctuations from year to year and the data from this part of the table should be used with caution.

Due to rounding, the sum of entries in the tables may differ slightly from the totals shown.

The following symbol and abbreviation are used throughout:

- = nil or less than 0.5 of the final digit shown
n.e.s. = not elsewhere specified

THE BASIC TABLES

Table A Commodity analysis of domestic output in 1972

	Sales by commodity group	Sales by industry group	1 Agriculture	2 Forestry and fishing	3 Coal mining	4 Petroleum and natural gas	5 Other mining and quarrying
