

22 November 2013

Correction

United Kingdom National Accounts, The Blue Book

2013 Edition

Errors have been found in the measurement of output and intermediate consumption in the institutional sectors financial corporations, private non-financial corporations, non-financial corporations and households and non-profit institutions serving households for the period 2008 to 2011.

Errors have also been found in other taxes less subsidies on production and gross value added in the institutional sectors financial corporations, private non-financial corporations and non-financial corporations for the period 2010.

The following series have been corrected in the United Kingdom National Accounts: The Blue Book, 2013 edition:

EACJ, FACQ, FAFA, FAIQ, FAIN, FAIO, FAIS, FAIT, FARP, FARR, FARS, FBXR, FBXS, FDCG, L62W, NHCS, NHCT, NHCV, NHCW, NHCX, NHDB, NHDC, NHJE, NHJN, QWLF, QWLI, QWLJ

The corrected series appear in tables:

A, 1.7A, 1.7B, 1.7C, 1.7.1, 1.7.2, 3.1.1, 3.1.2, 3.3.1, 3.3.2, 4.1.1, 4.1.2, 4.2.2, 6.1.1

These errors do not affect estimates for the UK total economy or net lending / borrowing by sector.

ONS apologises for any inconvenience this may cause. For further information please contact gdp@ons.gsi.gov.uk

1 FISIM = Financial intermediation services indirectly measured

2 In some sectors, including central government and local government, FISIM has been adjusted to avoid negative values for 2008. Negative values could distort the chained volume measures. The overall impact of these adjustments is small.

1.8B FISIM^{1,2} impact on UK gross domestic product and national income

1 FISIM = Financial intermediation services indirectly measured

2 Weights for FISIM chained volume measures are based on current price FISIM. In recent years negative current price FISIM for some components has been significant. To avoid distortions from negative weights (particularly for household deposits), 2009 weights have been adjusted. There are smaller adjustments to 2008 weights that also affect the current price data.

1 The contribution of each industry to the gross domestic product before providing for consumption of fixed capital. The industrial composition in this table is consistent with the Supply-Use Tables in Table 2.1, which show data from 2008-2011.

2 Components may not sum to totals due to rounding.

3 P.5 Gross Capital Formation (P.51 gross fixed capital formation, P.52 changes in inventories and P.53 valuables) by industry will be published as part of the Business Investment Q1 2013 Results - Industry Breakdown release on 16 August 2013.

¹ The weights shown are in proportion to total gross value added (GVA) in 2010 and are used to combine the industry output indices to calculate the totals. For 2009 and earlier, totals are calculated using the equivalent weights for the previous year (e.g. totals for 2008 use 2007 weights). Weights may not sum to totals due to rounding.

² As GVA is expressed in index number form, it is inappropriate to show as a statistical adjustment any divergence from the other measures of GDP. Such an adjustment does, however, exist implicitly.

³ See footnote 2 to Table 2.3.

1 "Purpose" or "function" classifications are designed to indicate the "socio-economic objectives" that institutional units aim to achieve through various kinds of outlays. COICOP is the Classification of Individual Consumption by Purpose and applies to households. COPNI is the Classification of the Purposes of Non-profit Institutions Serving Households and COFOG the Classification of the Functions of Government. The introduction of ESA95 coincides with the redefinition of these classifications and data will be available on a consistent basis for all European Union member states.

2 Package holidays data are dispersed between components (transport etc).

1 "Purpose" or "function" classifications are designed to indicate the "socio-economic objectives" that institutional units aim to achieve through various kinds of outlays. COICOP is the Classification of Individual Consumption by Purpose and applies to households. COPNI is the Classification of the Purposes of Non-profit Institutions Serving Households and COFOG the Classification of the Functions of Government. The introduction of ESA95 coincides with the redefinition of these classifications and data will be available on a consistent basis for all European Union member states.

2 Package holidays data are dispersed between components (transport etc)

1 All data refer to end of year. Components may not sum to totals due to rounding.

2 The lower end of the range of total reserves has been calculated as the sum of proven reserves and the lower end of the range of undiscovered reserves.

3 The upper end of the range of total reserves is the sum of proven, probable and possible reserves and the upper end of the range of undiscovered reserves.

4 Expected reserves are the sum of proven reserves, probable reserves and the lower end of the range of undiscovered reserves.

5 Negative extraction is shown here for the purposes of the calculation only. Of itself, extraction should be considered as a positive value.

1 Components may not sum to totals due to rounding.

2 Nuclear power, imports of electricity and renewable & waste sources.

3 Renewable sources include solar power and energy from wind, wave and tide, hydroelectricity, wood, straw, liquid biofuels and sewage gas. Landfill gas, poultry litter and municipal solid waste combustion have also been included within this definition.

1 Components may not sum to totals due to rounding.

2 Includes emissions from fuel sources which are used by road vehicles (eg HGVs, LGVs, cars and motorcycles) across all industries.

3 PM10 is particulate matter arising from various sources including fuel combustion, quarrying and construction, and formation of 'secondary' particles in the atmosphere from reactions involving other pollutants - sulphur dioxide, nitrogen oxides, ammonia and NMVOCs

4 Non-methane Volatile Compounds, including benzene and 1,3-butadiene.

1 Components may not sum to totals due to rounding

2 Indirect flows from domestic extraction relate to unused material which is moved during extraction, such as overburden from mining and quarrying.

3 A positive physical trade balance indicates a net import of material into the UK. This calculation of the PTB differs from the National Accounts formula (exports-imports) because flows of materials and products are considered the inverse of the flows of money recorded in the National Accounts.
