## About the Office for National Statistics

The Office for National Statistics (ONS) is the government agency responsible for compiling, analysing and disseminating many of the United Kingdom's economic, social and demographic statistics, including the retail prices index, trade figures and labour market data, as well as the periodic census of the population and health statistics. It is also the agency that administers the statutory registration of births, marriages and deaths in England and Wales. The Director of ONS is also the National Statistician and the Registrar General for England and Wales.

## A National Statistics publication

National Statistics are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political influence.

## Contents

Page
Units of measurement ..... vi
Introduction ..... 1
Tables
1 National accounts
1.1 Gross domestic product and gross national income ..... 3
1.2 Gross domestic product: by category of expenditure ..... 5
1.3 Gross domestic product: by category of income ..... 7
1.4 Index numbers: gross domestic product, chained volume indices at basic prices: by industry of output ..... 8
1.5 Households sector: allocation of primary income account ..... 9
1.6 Households sector: secondary distribution of income account ..... 10
1.7 Households sector: use of disposable income account ..... 11
1.8 Household final consumption expenditure ..... 12
1.9 Change in inventories at chained volume measures ..... 14
1.10 Gross fixed capital formation by sector and type of asset ..... 15
1.11 Business investment by industry, chained volume measures ..... 17
1.12 Business investment by industry at current prices ..... 18
1.13 Private sector manufacturing business investment by industry, chained volume measures ..... 19
1.14 Private sector manufacturing business investment by industry at current prices ..... 20
1.15 Private sector manufacturing business investment by asset ..... 21
2 Population and vital statistics
2.1 Mid-year estimates of resident population ..... 22
2.2 Age distribution of estimated resident population at 30 June 2005 ..... 22
2.3 Births and marriages ..... 23
2.4 Deaths registered ..... 23
3 Labour market
3.1 Labour market activity ..... 24
3.2 Distribution of the workforce ..... 24
3.3 Employee jobs: all industries ..... 25
3.4 Civil Service employment by department ..... 27
3.5 Intake and outflow of UK Regular Armed Forces Personnel ..... 27
3.6 UK armed forces full-time strengths ..... 28
3.7 Number of workers employed in agriculture ..... 29
3.8 Unemployment in United Kingdom ..... 30
3.9 Claimant count in United Kingdom: by duration ..... 31
3.10 Claimant count ..... 32
3.11 Unemployed: by Government Office Regions ..... 33
3.12 Claimant count: by Government Office Regions ..... 34
3.13 Vacancies at Jobcentres and career offices: by Government Office Regions ..... 35
3.14 Labour disputes ..... 36
4 Social services
4.1 National Insurance and Child Benefit ..... 37
4.2 Child and Working Tax Credit ..... 37
4.3 Income Support/Pension Credit/Jobseeker's Allowance (income based) ..... 38
4.4 Family health services ..... 38
5 Law enforcement
5.1 Recorded crime statistics: England and Wales ..... 39
5.2 Crimes and offences recorded by the police: Scotland ..... 39
6 Agriculture, food, drinks and tobacco
6.1 Land use and crop areas ..... 40
6.2 Crops: yields and production ..... 40
6.3 Livestock ..... 41
6.4 Animals slaughtered and meat produced ..... 41
Page
6.5 Cereals and cereal products ..... 42
6.6 Production of compound feedingstuffs ..... 42
6.7 Potatoes and sugar ..... 43
6.8 Production of bacon, ham and canned meat and meat stocks in cold storage ..... 43
6.9 Fish, oils and fats ..... 44
6.10 Milk, milk products and eggs ..... 44
6.11 Beverages and confectionery ..... 45
6.12 Tobacco products released for home consumption ..... 45
6.13 Alcoholic drink ..... 46
7 Production, output and costs
7.1 Output of the production industries ..... 47
7.2 Productivity jobs and output per filled job ..... 52
7.3 Key productivity measures ..... 53
8 Energy
8.1 Inland energy consumption: primary fuel input basis ..... 54
8.2 Supply and use of fuels ..... 55
8.3 Coal supply ..... 57
8.4 Inland use and stocks of coal ..... 57
8.5 Natural gas production and supply ..... 58
8.6 Fuel used by and electricity production and availability from the electricity supply industry ..... 58
8.7 Sales by the gas and public electricity supply systems ..... 59
8.8 Indigenous production, refinery receipts, arrivals and shipments of oil ..... 59
8.9 Deliveries of petroleum products for inland consumption ..... 60
9 Chemicals
9.1 Fertilisers ..... 61
9.2 Sulphur and sulphuric acid ..... 62
9.3 Basic chemicals, pesticides and other agro-chemical products ..... 63
9.4 Pharmaceutical products, soaps and other cleaning preparations and perfumes ..... 63
9.5 Other chemical products ..... 64
10 Metals, engineering and vehicles
10.1 Iron and steel ..... 65
10.2 Supplies and deliveries of steel ..... 65
10.3 Aluminium ..... 66
10.4 Total engineering: total turnover of UK-based manufacturers ..... 67
10.5 Mechanical, instrument and electrical engineering industries: volume index of turnover ..... 68
10.6 Mechanical, instrument and electrical engineering industries: volume index of orders on hand ..... 68
10.7 Mechanical, instrument and electrical engineering industries: volume index of net new orders ..... 69
10.8 Passenger cars ..... 70
10.9 Commercial motor vehicles ..... 70
11 Textiles and other manufactures
11.1 Index numbers of textiles and clothing industries ..... 71
11.2 Household textiles, non-woven products, canvas and ropes ..... 72
11.3 Knitted and crocheted products, lace and narrow fabrics ..... 72
11.4 Wearing apparel, dressing and dying of fur, leather clothes ..... 73
11.5 Miscellaneous products: goods not classified elsewhere ..... 73
12 Construction
12.1 Volume of construction output by all agencies by type of work at constant 2000 prices ..... 74
12.2 Value of new orders obtained by contractors for new work at current prices ..... 74
12.3 Building materials and components ..... 75
12.4 Permanent dwellings started and completed ..... 76
13 Transport
13.1 Motor vehicles: new registrations in Great Britain ..... 78
13.2 Motor vehicles currently licensed as at 31 December ..... 78
13.3 Index numbers of road traffic and goods transport by road ..... 79
13.4 Road casualties in Great Britain ..... 79
13.5 Local bus services: vehicle kilometres and passenger journeys ..... 80
13.6 Local bus services: fare indices ..... 80
13.7 National Rail and London Underground ..... 81
Page
13.8 National Rail: freight traffic ..... 81
13.9 UK airlines: aircraft kilometres flown, passengers and cargo uplifted ..... 82
13.10 Merchant vessels registered in the United Kingdom ..... 84
13.11 UK passenger movement by sea and air ..... 85
13.12 UK passenger movement by sea and air: analysis of countries of landing and of embarkation ..... 86
14 Retailing
14.1 Index numbers of retail sales: volume and values, seasonally adjusted ..... 87
14.2 Index numbers of retail sales: values, not seasonally adjusted ..... 87
15 External trade in goods
15.1 Values of United Kingdom total trade in goods ..... 89
15.2 Volume and Price index numbers ..... 90
15.3 United Kingdom trade in goods, by commodity group ..... 91
15.4 Volume index numbers, by commodity group ..... 92
15.5 Price index numbers, by commodity group ..... 93
15.6 United Kingdom exports, by commodity ..... 94
15.7 United Kingdom imports, by commodity ..... 95
15.8 United Kingdom exports, by area ..... 96
15.9 United Kingdom imports, by area ..... 97
15.10 Import penetration and export sales ratios for products of manufacturing industry ..... 98
16 UK Balance of payments
16.1 Balance of payments: summary ..... 99
16.2 Balance of payments: current account balances ..... 100
16.3 Balance of payments: summary of financial account ..... 101
17 Government finance
17.1 Public sector finances ..... 102
17.2 Central government transactions and fiscal balances ..... 103
17.3 Public sector aggregates ..... 104
17.4 Selected financial statistics ..... 105
17.5 Monetary aggregates ..... 106
17.6 Selected interest rates, exchange rates and security prices ..... 106
18 Prices and wages
18.1 Consumer Prices Index: by divsion ..... 107
18.2 Consumer Prices Index: by divsion, group and classes ..... 108
18.3 Retail Prices Index ..... 110
18.4 Retail Prices Index: groups, sub-groups and sections ..... 111
18.5 Retail Prices Index (All items) ..... 113
18.6 Harmonised Indices of Consumer Prices (HICPs): international comparisons: EU countries ..... 114
18.7 Internal purchasing power of the pound ..... 114
18.8 Tax and Price index ..... 115
18.9 Index numbers of producer prices ..... 116
18.10 House Price Index, by Government Office Regions ..... 120
18.11 Index of purchase prices of the means of agricultural production and of producer prices of agricultural products ..... 121
18.12 Average weekly and hourly earnings and hours of full-time employees on adult rates ..... 122
18.13 Average weekly and hourly earnings of full-time employees on adult rates by industry division ..... 123
18.14 Average weekly and hourly earnings of full-time employees by age group ..... 124
18.15 Average earnings index: all employee jobs: by industries ..... 125
18.16 Average earnings index: all eployees: main industrial sectors ..... 129
19 Leisure
19.1 Television licences ..... 131
19.2 UK cinema statistics ..... 131
19.3 Average issue readership of national daily newspapers ..... 132
19.4 Overseas travel and tourism ..... 132
20 Weather
20.1 District summary ..... 133
20.2 UK annual summary ..... 133
Index ..... 134
Annual Supplement ..... 137

## Units of Measurement

## Length

1 millimetre (mm)
1 centimetre (cm)
1 metre (m)
1 kilometre (km)
1 inch (in.)
1 foot (ft.)
1 yard (yd.)
1 mile

## Area

1 square millimetre ( $\mathrm{mm}^{2}$ )
1 square metre ( $\mathrm{m}^{2}$ )
1 hectare (ha)
1 square kilometre (km²)
1 square inch (sq. in.)
1 square foot (sq. ft.)
1 square yard (sq. yd.)
1 acre
1 square mile (sq. mile)

## Volume

1 cubic centimetre ( $\mathrm{cm}^{3}$ )
1 cubic decimetre ( $\mathrm{dm}^{3}$ )
1 cubic metre ( $\mathrm{m}^{3}$ )
1 cubic inch (cu.in.)
1 cubic foot (cu. ft.)
1 cubic yard (cu. yd.)

## Capacity

1 litre (I)
1 hectolitre (hl)
1 pint
1 quart
1 gallon
1 bulk barrel

## Weight

1 gram (g)
1 hectogram (hg)
1 kilogram (kg)
1 tonne (t)
1 ounce avoirdupois (oz.)
1 pound avoirdupois (lb.)
1 hundredweight (cwt.)
1 short ton
1 long ton (referred to as ton)
1 ounce troy

## Energy

British thermal unit (Btu)
Therm
Megawatt hour (MWh)
Gigawatt hour (GWh)

## Food and drink

Butter
Cheese
Condensed milk
Milk
Milk powder

Eggs
Sugar

23,310 litres milk
10,070 litres milk
2,550 litres milk
2,953 litres skimmed milk
1 million litres
8,054 litres milk
10,740 litres skimmed milk
17,126 eggs
100 tonnes sugar beet
100 tonnes cane sugar
= 1 tonne butter (average)
= 1 tonne cheese
= 1 tonne full cream condensed milk
= 1 tonne skimmed condensed milk
$=1,030$ tonnes
= 1 tonne full cream milk powder
$=1$ tonne skimmed milk powder
$=1$ tonne (approximate)
= 92 tonnes refined sugar
= 96 tonnes refined sugar

## Shipping

Gross tonnage
Deadweight tonnage
= total volume of all the enclosed spaces of a vessel, the unit of measurement being a 'ton' of 100 cubic feet. $=$ Deadweighttonnage is the total weight in tons of $2,240 \mathrm{lb}$. that a ship can legally carry, that is the total weight of cargo, bunkers, stores and crew.

## Monthly Digest Navigation Instructions

## Overview

This PDF file of Monthly Digest has been created from the pages of the book. These brief instructions will help you find your way around the electronic publication.

## Navigation

The PDF file has a 'bookmarks' panel down the left hand side, which allows you to jump from one section to another. The main chapters have lower levels of bookmarks enabling you to jump to the tables contained in each chapter. You can show and hide the bookmarks panel using the show/hide navigation buttons on the Acrobat Reader toolbar at the top of the screen. Thumbnails (small replicas of the pages) are also available in the navigation pane. Clicking on a thumbnail of a page will allow you to jump to that page. Similarly, clicking on the Contents table will permit you to skip to any chapter or individual table.

## Searching

The first large binoculars (find) button at the top of the screen will do a simple search on a word in the current document. To see if the word appears again in the publication click again on the binoculars button.

## Spreadsheets

Clicking anywhere on a table number, table title or the main body of a table will launch an Excel file. A number of the tables in this pdf document are spread over more than page. Efforts have been made to combine these into a single worksheet in each of the corresponding Excel files. Where this has not been possible, as where units or periodicity differ from page to page, each page has been accorded its own separate worksheet within the same Excel file. The worksheet tabs and the instructions appearing in red at the top of the affected tables indicate how each has been treated. To permit the data in the Excel spreadsheets to be used in calculations, it has also been necessary to remove "flags" and footnote indicators from the numbers in the files.

In the event of differences between the data appearing in the Excel files and those presented in the corresponding pdf tables, the pdf versions are to be regarded as definitive.

## Index

Clicking on an index entry will take you automatically to the relevant table.

## Screen Resolution

Adobe Acrobat works with any screen resolution. For this product $800 \times 600$ is acceptable, but $1024 \times 768$ works better if the monitor and graphics card will support it. To change the view type to one which best suits your screen, use the View menu.

## Other

If the text looks blurry on screen, this may be improved by visiting File Menu, Preferences, General and switching 'Smooth Text and Monochrome images' off.

## Introduction

This publication has been prepared by the Office for National Statistics (ONS) in collaboration with a number of government departments and other organisations. The assistance provided by them is gratefully acknowledged.

The name of the department or organisation providing the statistics is shown under each table, additionally, on some tables this is followed by a contact telephone number.

All the data series published in the Monthly Digest are contained on an ONS database, and nearly all are stored with a four letter identification code (e.g. ABMZ). These codes appear at the start of columns or rows so that they can be quoted if you contact us requiring any further information.

The latest Annual Supplement to Monthly Digest was published in the January 2007 edition. This gives detailed definitions and explanatory notes and includes an index of sources.

## Definitions and classifications

The following general definitions should be noted in using the Digest:

Area covered. Except where otherwise stated, all statistics relate to the United Kingdom of Great Britain and Northern Ireland.

Seasonality. Except where otherwise stated, all statistics are not adjusted to take account of seasonal factors.

The UK Standard Industrial Classification 1992 is used in a number of tables in this digest to split economic activity. Full details are available from UK Standard Industrial Classification of Economic Activities 1992, and Indexes to the UK Standard Industrial Classification of Economic Activities 1992, both available from Palgrave Macmillan.

Regional classification is based on the Government Office Regions.

## Symbols and conventions used

Change of basis. Where consecutive figures have been compiled on different bases and are not strictly comparable, a footnote is added indicating the nature of the difference. Also, a line may be drawn across a column between two consecutive figures indicating that the figures above and below the line have been compiled on different bases.

Units of measurement. The various units of measurement used in this digest are listed on the opposite page.

Symbols. The following symbols have been used throughout:
.. = not available (also information suppressed to avoid disclosure)

- = nil or less than half the final digit shown
$\dagger=$ indicates that the data have been revised
$p=$ provisional data
since the last edition: the period marked is the earliest in the table to have been revised

Also, some tables have symbols specific to them. These will be explained in the footnotes to those tables.

Rounding of figures. In tables where figures have been rounded to the nearest final digit, there may be a slight discrepancy between the sum of the constituent items and the total as shown.

## Provisional data

Some figures are provisional and may be subject to revision in later editions. This applies par ticularly to data for the most recent time periods. Where data has been revised a dagger symbol, as previously mentioned, will appear.

National Statistics Online: www.statistics.gov.uk
Web-based access to time series, cross sectional data and metadata from across the Government Statistical Service (GSS), available using the site search and index functions from the homepage. Download many datasets, in whole or in part, or consult directory information for all GSS statistical resources, including censuses, surveys, periodicals and enquiry services. Information is posted as PDF electronic documents or in XLS and CSV formats, compatible with most spreadsheet packages.

## Time Series Data

Access to around 40,000 time series, of primarily macroeconomic data, drawn from the main tables in a range of our major economic and labour market publications. Download complete releases, or view and download your own customised selection of individual time series.

Complete copies of this publication are available to download free of charge on the following web page. www.statistics.gov. uk/monthlydigest

## Acknowledgements

## Contributors

The Editor wishes to thank all her colleagues in ONS, the rest of the Government Statistical Service and all contributors in other organisations for their generous support and helpful comments.

1 Components of output are valued at basic prices, which excludes taxes less 4 The weights shown are in proportion to total gross value added (GVA) in 2003 subsidies on products, whereas GDP is valued at market prices.
2 The latest data for the index of production (series CKYW) are presented in Table 7.1. The figures given in this table are consistent with the figures for gross value added.
3 Includes an implicit discrepancy compared with the sum of the previous columns because the GDP aggregate takes account of other information based on incomes and expenditures.

### 1.5 Households sector ${ }^{1}$ : allocation of primary income account

1 Until September 2001, Household Expenditure was published and broken 4 Following reclassification to COICOP, alcohol consumed on the premises has down into 13 main headings according to existing UK National Accounts convention. From September 2001 it has been reclassified so as to conform to the European System of Accounts 1995 (ESA 95) COICOP (Classification Of Individual Consumption by Purpose).
2 Final consumption expenditure by UK households in the UK and abroad.
3 Final expenditure consumption in the UK by UK and foreign households.
4 Following reclassification to COICOP, alcohol consumed on the premises has
been transferred from the "alcohol and tobacco" heading to "restaurants and hotels". Similarly, under reclassification, transport now includes purchase of bicycles.

### 1.9 Change in inventories at chained volume measures

1 Estimates are given to the nearest $£$ million but cannot be regarded as accurate to this degree.
2 Wholesaling and retailing estimates exclude the motor trades.
3 Quarterly alignment adjustment included in this series. For description see notes.

1 Remaining investment by public corporations included within business in-
Source: Office for National Statistics: 02075335934 vestment.
2 Not including dwellings and purchases less sales of land and existing buildings.
3 Please note that the data in the second quarter of 2005 is due to the transfer of nuclear reactors. In April 2005 British Nuclear Fuels (BNFL) transferred to the Nuclear Decommissioning Authority (NDA) nuclear reactors that were reaching the ends of their productive lives. BNFL is classified as a public corporation in the National Accounts and the NDA as central government. This transfer does not affect whole economy gross fixed capital formation (GFCF) since it is an acquisition by one sector and a disposal by another. The value of the transfer was $-£ 15.6$ billion. The negative value reflects the fact that the reactors are at the end of their productive lives and have large decommissioning and clean-up liabilities.

1 All figures are exclusive of expenditure on land and existing buildings.
Source: Office for National Statistics: 02075335934
2 Estimates are shown to the nearest $£$ million but should not be regarded as accurate to this degree.
3 All private sector figures are exclusive of expenditure on dwellings.
4 Includes Agricultural Contractors.
5 Please note that the data in the second quarter of 2005 is due to the transfer of nuclear reactors. In April 2005 British Nuclear Fuels (BNFL) transferred to the Nuclear Decommissioning Authority (NDA) nuclear reactors that were reaching the end of their productive lives. BNFL is classified as a public corporation in the National Accounts and the NDA as central government. This transfer does not affect whole economy gross fixed capital formation (GFCF) since it is an acquisition by one sector and a disposal by another. The value of the transfer was $-£ 15.6$ billion. The negative value reflects the fact that the reactors are at the end of their productive lives and have large decommissioning and clean-up liabilities.

Note: Figures may not add exactly due to rounding.
1 Excluding stillbirths.
2 Birth figures for England and also for Wales each exclude events for persons usually resident outside England and Wales. These events are however, included in the totals for England and Wales combined, and for the United Kingdom.

3 For England and Wales, figures relate to numbers occurring in a period; for Scotland and Northern Ireland, figures relate to those registered in a period.
4 Provisional.

1 The data in this table include revised figures for self-employment to reflect 3 Estimates of the self-employed are based on the results of the Labour Force the results of the 2001 Census. Survey. The estimates given in the table are unadjusted.
2 Estimates for employee jobs and workforce jobs for Great Britain now use the Annual Business Inquiry as a benchmark on which the quarterly movements are based. For further information see Labour Market Statistics First Release April 2001.

4 HM Forces figures, provided by the Ministry of Defence, represent the total number of UK service personnel, male and female, in HM Regular Forces wherever serving and including those on release leave. The numbers are not subject to seasonal adjustment.

1 Numbers are rounded to the nearest ten. Data not available are represent- 3 The Wine Standards Board (former NDPB) merged with the Food Standards ed by "-". Agency on 1 July 2006.
2 The Office of the Third Sector (OTS) was established in May 2006. Em-
Source: Office for National Statistics ployee numbers for OTS will not be available until Q4. For this publication, the employees are therefore still included with their former departments.

### 3.5 Intake and outflow of UK Regular Armed Forces Personnel

1 Intake from civilian life, includes re-enlistments and rejoined reservists.
2 Outflow includes recalled reservists on release and outflow to the Home Service battallions of the Royal Irish Regiment.
3 Denotes provisional. Due to the introduction of a new Personnel Administration System for RAF, all data from 1st May 2006 and onwards are provisional and subject to review.

Figures are for UK Regular Forces (including both Trained and Untrained personnel), and therefore exclude Gurkhas, Full Time Reserve Service personnel, the Home Service battalions of the Royal Irish Regiment, mobilised reservists and Naval Activated Reservists.

1 Figures exclude farmers, partners, directors and their spouses, salaried managers, school children and most trainees. Includes estimates for minor holdings.
2 In 1998, fundamental changes were introduced to the labour questions on the June Agricultural and Horticultural Census in England, Wales and Scotland. It appears that this change in questions may have led to the recording of additional Labour who were not previously included in the returns. The change in questions has also led to a redistribution of labour between the various categories. We therefore advise caution when comparing the results from 1998 onwards with previous years.

3 Due to an English register improvement only the top figure for 2001 is directly comparable with June 2000, while the bottom figure for 2001 is only comparable with data from June 2002.

1 The seasonally adjusted series relate only to claimants aged 18 or over in order to maintain the consistent series, available back to 1971 (1974 for the regions - see p. 608 of the December 1990 Employment Gazette and pS16 of the April 1994 issue for the list of discontinuities taken into account). It also takes into account the effect of the change in benefit eligibility rules introduced with Jobseeker's Allowance (see p.219-24, Labour Market Trends, May 2000). The latest national and regional seasonally adjusted claimant count figures are provisional and are subject to revision mainly in the following month.

2 Percentage rates have been calculated by expressing the number of claimants as a percentage of the estimated total workforce (the sum of claimants, employees jobs, self-employed, HM Forces and participants on work related government training programmes) at mid-2005 estimates for 2005 and 2006 figures and at the corresponding mid-year estimates for earlier years.

Unemployed

1 Due to slight methodological differences between the way the national and 2 Unemployed as a percentage of total economically active (the sum of unemregional LFS estimates have been interim adjusted for the 2001 Census, ployed and those in employment).
there may be small differences between the UK totals and the sum of the regional components.

1 The seasonally adjusted series relate only to claimants aged 18 or over in order to maintain the consistent series, available back to 1971 (1974 for the regions - see p. 608 of the December 1990 Employment Gazette and pS16 of the April 1994 issue for the list of discontinuities taken into account). It also takes into account the effect of the change in benefit eligibility rules introduced with Jobseeker's Allowance (see p.219-24, Labour Market Trends,
May 2000). The latest national and regional seasonally adjusted claimant count figures are provisional and are subject to revision mainly in the following month.

2 Percentage rates have been calculated by expressing the number of claimants as a percentage of the estimated total workforce (the sum of claimants, employees jobs, self-employed, HM Forces and participants on work related government training programmes) at mid-2005 estimates for 2005 and 2006 figures and at the corresponding mid-year estimates for earlier years.

1 Only a proportion of all vacancies are notified to Jobcentres. These could include some that are suitable for young persons and similarly vacancies notified to careers offices could include some for adults. Because of possible duplication the two series should not be added together. The figures represent only the number of vacancies notified by employers and remaining unfilled on the day of the count
2 The publication of the vacancy figures for Northern Ireland has been suspended since March 1999 as a result of a difficulty caused by the introduction of a new computer system for processing vacancies to Training and Employment Agency offices. For the purpose of the seasonally adjusted United Kingdom figures it has been assumed provisionally that the Northern Ireland figures have remained constant since February 1999.

3 Publication of the Jobcentre vacancy statistics has been deferred. Figures from May 2001 are affected by the introduction of Employer Direct. This major change involves transferring the vacancy taking process from local Jobcentres to regional Customer Service Centres, as part of Modernising the Employment Service. ONS and the Department of Work and Pensions will continue to monitor and review the data with the aim of publishing the series as soon it is possible to produce a consistent measure.

1 Excludes stoppages involving fewer than 10 workers or lasting less than 2 The working days lost figures relate to the total working days lost within each of one day except any in which the total number of working days lost are 100 or more. There may be some under-recording of small or short stoppages; the periods shown as a result of stoppages in progress in that period, whether the stoppages began in that period or earlier.
this would have much more effect on the total stoppages than on working

1 Child Benefit figures are taken from the Child Benefit Computer System 5\% scan in the months shown. Figures exclude overseas cases.
2 Jobseeker's Allowance (JSA) figures have been derived by applying 5\% proportions to 100\% WPLS totals. Excludes recipients of contribution based and income based benefit.
3 Excluding pensioners in receipt of non-contributory State Pension awarded under National Insurance Acts 1970 and 1971. Also excludes overseas and Channel Islands.

4 Includes all Widow's Benefit and Bereavement Benefit except Widow's Payment and Bereavement Payment. Excludes overseas and Channel Island cases.
5 The figures for Incapacity Benefit are calculated from 100\% counts but are provisional and therefore subject to amendment.
6 Child Benefit is the responsibility of HM Revenue and Customs.

1 IS claimants have been assigned to a statistical group according to a hierar- 4 "Lone Parents" are single recipients of Income Support aged under 60 with a chy. The order is as shown in the table, i.e. "Aged 60 and over", "Incapacity Benefits" etc. For example, lone parents with both Incapacity Benefits and Income Support will fall into the "Incapacity Benefits" category.
2 "Aged 60 and over" are benefit units where the claimant and/or partner is aged 60 or over.
3 "Incapacity Benefits" refer to claimants aged under 60 claiming Incapacity Benefit (IB) or Severe Disablement Allowance (SDA), including IB credits only cases.
child under 16 who are not in receipt of IB/SDA.
5 "Others" are recipients of Income Support not in one of the other categories.
6 Since 6th October 2003, Income Support for claimants aged 60 or over have been paid via the new Pension Credit. Pension Credit eligibility is also more generous than prior to 6th October 2003, increasing the numbers of pensioners in receipt.
7 JSA figures have been derived by applying 100\% WPLS proportions to 5\% totals.

Note: Crime statistics for the British Transport Police (BTP) have been added to the England and Wales recorded crime series from April (Q2) 2002 onwards.
1 The counting rules were revised on 1 April 1998 with an expanded coverage of offences and the emphasis more on measurement of one crime per victim. All offences that are triable on indictment and triable-either-way are now included as are some summary offences which are closely linked to more serious offences. The changes mainly impact on the violence against the person, fraud and forgery, drug offences and "other" offence groups.
2 Some forces adopted the principles of the National Crime Recording Standard in advance of its national implementation on 1 April 2002. For 2001/02 as a whole it has been calculated that this in itself has inflated the total number of crimes recorded by $5 \%$, although the impact differs for each offence group.

The National Crime Recording Standard (NCRS) was introduced across all police forces from April 2002, and this has increased the recorded crime figures significantly. For 2002/03 it has been estimated that the implementation of the Standard has inflated the total number of recorded crimes by $10 \%$, although the impact differs for each offence group. Violence against the person was particularly affected. Due to the introduction of the NCRS in April 2002, figures before and after this date are not directly comparable.
4 Much of the increase in violence against the person in 2003/04 is likely to be due to the continuing impact of changes in recording.
5 The Sexual Offences Act 2003, introduced in May 2004, re-defined many sexual offences. This change in legislation could, in itself, account for much of the increase in recorded sexual offences and means figures for 2004/05 are not comparable with earlier years.

1 Owing to change in methodology, the data are now collected on a quarterly basis, and consequently, cannot be provided for the intermediate months.
2 Stocks held in cold stores for private concerns or in undischarged cargos are not included.

3 The stocks held in Public Coldstores in the United Kingdom survey was discontinued in March 2006. As a result, stocks data is no longer published.

1 Data are available only quarterly.
2 Percentage alcohol by volume.
3 Made wine with alcoholic strength $1.2 \%$ to $5.5 \%$, includes alcoholic lemonade of appropriate strength.
4 From 28 April 2002 duty on spirit-based ready-to-drink (RTDs) products is charged at the same rate as spirits per litre of alcohol. Until September 2002, RTDs were recorded under the imported and spirits. Customs and Excise have now been able to estimate the amount of RTDs under the spirits and remove them from the spirits clearances. Spirit-based RTDs were previously dutied at the made wine rate.

## 7 Production, output and costs

## 7. Output of the production industries

1 Layout comparable with annual balances published in Table 1.1 of DUKES 2005
2 Stock fall (+), stock rise (-).
3 Primary supply minus primary demand.
4 Annual transfers should ideally be zero. For manufactured fuels differences occur in the rescreening of coke to breeze. For oil and petroleum products differences arise due to small variations in the calorific values used.
5 Generation of heat for sale under the provision of a contract.

6 Includes all manufactured solid fuels, benzole, tars, coke oven gas and blast furnace gas.
7 Includes colliery methane.
8 Includes heat sold.
9 Includes geothermal and solar heat. Latest quarter is estimated from the previous year and adjusted according to average annual rate of change over the last three years.
10 Includes public administration, commercial, agriculture and miscellaneous use

1 Includes an estimate for slurry.
Source: Department of Trade and Industry: 02072152698
2 To December 1992, as recorded in the Overseas Trade Statistics of the United Kingdom (OTS). From January 1993, import figures include an additional estimate for unrecorded trade. From March 1994, Import figures are being estimated on the basis of information available for extra-EC trade until monthly statistics for intra-EC trade become available from the Office for National Statistics.

1 Includes waste and own use but excludes gas flared.
2 Gas used for drilling, production and pumping operations.
3 Includes exports direct from the UKCS as well as others carried out by the downstream gas industry from the national transmission system.
4 Gas available at terminals for consumption in the UK as recorded by the terminal operators.
5 Gas input into inland transmission systems. It includes public gas supply, direct supply by North Sea producers, third party supplies, and
stock changes. Figures differ from gas available for consumption in the UK mainly because of additional stock changes at local distribution zones. The figures also differ from total consumption (expressed in oil equivalent in Table 8.1) because they exclude producers' and operators' own use and losses.
6 Including public gas supply, direct supplies by North Sea producers, third party supplies and stock changes.

[^10]4 Used in works and for pumping at pumped storage stations.
5 Includes gas turbines, oil engines and plants producing electricity from renewable sources other than hydro
7 Electricity supplied from major power producers plus purchased from other UK producers plus net imports from overseas.

Sales by the gas and public electricity supply systems

[^11]6 Net imports (+) or net exports (-) of oil and oil products.
7 From January 2000 arrivals of petroleum products and marine bunkers contain estimated additions to allow for (temporarily) missing imports data.
8 There have been some modest changes made to this table following the review announced by DTI in the June 2006 edition of Energy Trends. The review was aimed at improving data coherency and coverage between the different quarterly and monthly DTI tables. The 'net foreign imports' column has been replaced by 'total net imports/exports' and now covers oil 'total receipts' column for refinery receipts introduced instead.

[^12]6 There have been some modest changes made to this table following the review announced by DTI in the June 2006 edition of Energy Trends. The review was aimed to improve data coherency and coverage between the different quarterly and monthly DTI tables. Other petroleum gases are now shown. Middle distillate feedstock is now included with other gas/diesel oil rather than previously being combined with naphtha. Unleaded motor spirit and premier burning oil have been discontinued.

1 Excludes iron foundries and refined iron works.
2 Including manganese ore.
3 Includes blast furnace ferro-alloys.

4 Includes blast furnace ferro-alloys, but excludes iron foundries and refined iron works.
5 Stocks of ingots, semi-finished and finished steel.

## Division Description

Division 29 : Manufacture of machinery and equipment not elsewhere classified
2911 Manufacture of engines and turbines except aircraft, vehicle \& cycle engines
2912 Manufacture of pumps and compressors
2913 Manufacture of taps and valves
2914 Manufacture of bearings, gears, gearing and driving elements
2922 Manufacture of lifting and handling equipment
2923 Manufacture of non-domestic cooling and ventilation equipment
2924 Manufacture of other general purpose machinery not elsewhere classified
2941 Manufacture of metalworking machine tools
2949 Manufacture of other machine tools
2952 Manufacture of machinery for mining, quarrying and construction
2953 Manufacture of machinery for food, beverage and tobacco processing
2954 Manufacture of machinery for textile, apparel and leather production
2956 Manufacture of other special purpose machinery not elsewhere classified
2971 Manufacture of electric domestic appliances
Division 30 : Manufacture of electrical and optical equipment
3001 Manufacture of office machinery
3002 Manufacture of computers and other information processing equipment

Division 31 : Manufacture of electrical machinery and apparatus not elsewhere classified
3110 Manufacture of electric motors, generators and transformers
3120 Manufacture of electricity distribution and contro apparatus
3130 Manufacture of insulated wire and cable
3140 Manufacture of accumulators, primary cells and primary batteries
3150 Manufacture of lighting equipment and electric lamps
3161 Manufacture of other electrical equipment for engines and vehicles not otherwise classified
3162 Manufacture of other electrical equipment not elsewhere classified

Division 32 : Manufacture of radio, television and communication equipment and apparatus
3210 Manufacture of electronic valves and tubes and other electronic components
3220 Manufacture of television and radio transmitters and apparatus for line telephony and line telegraphy
3230 Manufacture of television and radio receivers, sound or video recording or reproducing apparatus and associated goods

Division 33 : Manufacture of medical, precision and optical instruments, watches and clocks
3310 Manufacture of medical and surgical equipment and orthopaedic appliances
3320 Manufacture of instruments and applicances for measuring, checking, testing, navigating and other purposes, except industrial process control equipment
3340 Manufacture of optical instruments and photographic equipment

1 The figures shown represent the output of UK - based manufacturers class- 2 Orders on hand figures are given for the end of the period to which they relate. ified to Subsections DK and DL of the Standard Industrial Classification 3 The data on this table are not seasonally adjusted.
2003. The figures shown are derived from the monthly production inquiry
(MPI) and include estimates for non-responders and for establishments
which are not sampled.

Mechanical, instrument and electrical engineering industries ${ }^{1,2}$
Seasonally adjusted volume index numbers of new orders: Standard Industrial Classification 2003
2000 average monthly sales $=100$

1 The figures shown represent the output of UK - based manufacturers classified to Subsections DK and DL of the Standard Industrial Classification 2003. The figures shown are derived from the monthly production inquiry (MPI) and include estimates for non-responders and for establishments which are not sampled.
2 Orders on hand figures are given for the end of the period to which they relate.

Note: From December 2006 (reference period October 2006) constant price seasonally adjusted data will no longer be available.

1 In addition to the sectors listed, this includes throwing, texturing, etc of continuous filament yarn; spinning and weaving of flax, hemp and ramie; jute and polypropylene yarns and fabrics, and miscellaneous textiles (ie lace; rope, twine and net; narrow fabrics and other miscellaneous textiles).
2 In addition to the sectors listed, this includes hats, caps and millinery;
gloves, other dress industries (ie swimwear and foundation garments; um-
brellas and miscellaneous industries).

3 For confidentiality reasons, the data for these industries have been suppressed from 2005 Q1 onwards. This suppression is required because both industries now fail ONS disclosure rules and are therefore no longer available for publication.

| Q3 | 11.4 | 14.6 | 26.1 | 5399 |

1 Freight train traffic only.
2 There is a break in the series between 2004 Q1 and 2004 Q2, due to a change in the method of data collection.
3 There is a further break in the series between 2005 Q1 and 2005 Q2, since the 2005 Q2 figures onwards include some of the tonnes lifted by and additional Freight Operating Company.

Note: The freight lifted series has been revised. Previously the coal figure for one of the freight operating companies included iron ore. Iron ore has now been correctly assigned to the 'other' category. This revision did not affect the total figures, but caused a reduction in the coal and coke figures and an increase in the 'other' category.

Note: Sea and Air passenger numbers are seasonal, which should be taken into account when comparing figures within a year.

1 Excluding movement by land across the frontier between the Irish Republic and Northern Ireland, passengers travelling between the Channel Islands and Great Britain, passengers carried in aircraft chartered by British government departments and as far as possible, passengers travelling by
sea on day trips and HM and other Armed Forces travelling in the course of their duties.
2 Passengers on pleasure cruise beginning and/or ending at UK seaports (excluding QE2 passengers between Southampton and New York which are in cluded in rest of world).
3 The figures do not include oil rigs.

Note: Indices are given to one decimal place to provide as much information 2 The taxes excluded are council tax, VAT, duties, vehicle excise duty, insurance as is available but precision is greater at higher levels of aggregation, ie at tax and airport tax. There are no weights available for RPIY. sub-group and group levels. Further information on the RPI is available from the National Statistics Website: www.statistics.gov.uk/rpi.

1 Retail Prices Index 1914-1990 contains group and sub-group indices and weights back to 1956, group indices back to 1947, together with cost of living indices as far back as 1914.

Note: Further information on HICP is available from the National Statistics Website: www.statistics.gov.uk/hicp.

Published as the Consumer Prices Index (CPI) in the UK. (UK 2005=100, others 1996=100)
2 The EICP (European Index of Consumer Prices) is the official EU aggregate It covers 15 member states until April 2004 and 25 member states from May 2004, the new member states being integrated using a chain index
formula. The EU 25 annual average for 2004 is calculated from the EU 15 average from January to April and the EU 25 average from May to December.
3 The coverage of the European Union was extended to include Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia and Slovenia with effect from 1 May 2004. Data for the EU 25 average is only available from May 2004. Note: April 2006 data for 'Austria' and 'EU 25 average' is Provisional.

1 This month's edition contains data rebased onto 2000=100. For information 4 Indicates values which are considered less reliable than the remainder currently the rebased back data for the headline PPI series is available under related links at www.statistics.gov.uk/ppi
2 A base weighted (1995=100) combination of the separate price indices for contractors' output in the six new work sectors. For a fuller description see Economic Trends No 297. published mainly due to the lack of market coverage.

From February 2002, data are based on a significantly enlarged return from the Survey of Mortgage Lenders, and are calculated through improved methodology. Annual and quarterly data prior to February 2002 are from the $5 \%$ Survey of Mortgage Lenders, and have been rebased to Feb 2002=100.

1 Series based on prices at the mortgage completion stage collected through
Source: Department for Communities and Local Government the Survey of Mortgage Lenders. The index takes into account the mix of properties sold.
2 The series starts at February 2002 rather than January 2002 because the required volume of completions was achieved from that date only.
3 From September 2005 the index is based on the new Regulated Mortgage Survey (CML/BankSearch).

1 The above table of 20 industries was first published in the Monthly Digest in May 2002 (as table 18.11). The new set of 20 industry sectors was intro-
duced as it better reflects the current state of the economy. Data are available in two formats: excluding bonus and including bonus, with each available as an index value and as an annual percentage change. An article
covering the reasons for change can be found on our website: www.statistics.gov.uk/labour
2 Users should note that the data contained in the previous set of 26 industry sectors are not comparable with the new set of 20 industry sectors. Source: Office for National Statistics: 01633819024

| England \& Wales | 27.6 | -1.3 | 1.0 | 1.5 | 1.2 | 1.3 | 5 | 173 | 93 | 173.1 |

Anomalies are with respect to the 1961-90 averaging period.
May 2006 - A very wet month in most places, with some areas over England \& Wales receiving over double the average May rainfall.

2 Highest maximum and lowest minimum air temperatures for each district are determined by calculating 95 percentiles.
3 Raindays are the number of days during which the total precipitation is at least 0.2 mm .

Source: Met Office

1 District values for each element are computed using all available climate stations, excluding rooftop sites for minimum air temperature. The values in the table may not be compatible with other time series (eg. Central England Temperature, England and Wales Rainfall).

## Definitions and explanatory notes

## Introduction

This supplement gives definitions of items and units employed in the Monthly Digest of Statistics in more detail than is possible in the headings and footnotes of the tables in the publication itself.

This issue replaces the Annual Supplement published in the January 2006 edition of the Monthly Digest of Statistics, No 721. If further new data are added or changes are made in the content before the next edition of this supplement, the new data will be described in the Introduction and additional definitions will be given, where necessary, in the footnotes to the tables.

## 1. National accounts

The tables which follow are based on those in the Blue Book 2006 Edition and Business Investment First Release. Some of the figures are provisional and may have to be revised later; this applies particularly to the figures for 2005 onwards. Quarterly updates to National Accounts data are available within the United Kingdom Economics Accounts Publication.

The accounts are based on the European System of Accounts 1995 (ESA95). The Blue Book contains an introduction to the system of the UK accounts outlining some of the main concepts and principles of measurement used. It explains how key economic indicators are derived from the sequence of accounts and how the figures describing the whole economy are broken down by sector and by industry. A detailed description of the structure for the accounts is provided in a separate ONS publication United Kingdom National Accounts: Concepts, Sources and Methods (TSO, 1998). Further information on the financial accounts is given in the Financial Statistics Explanatory Handbook.

In the tables in this chapter on national income, analyses by industry are based, as far as possible, on the Standard Industrial Classification Revised 1992. The first aggregate measured in these tables is Gross domestic product (GDP) which measures the total economic activity taking place in UK territory. It can be viewed as incomes earned, as expenditures incurred, or as production. Adding all primary incomes received from the rest of the world and deducting all primary incomes payable to non-residents produces Gross national income (previously known as gross national product) representing the value of all incomes earned by UK residents.

ESA95, the internationally compatible accounting framework, provides a systematic and detailed description of the UK economy. It includes the sector accounts which provide, by institutional sector, a description of the different stages of the economic process from production through to income generation, distribution and use of income to capital accumulation and financing; and the input output framework, which describes the production process in greater detail. It contains all the elements required to compile such aggregate measures as GDP, gross national income (GNI) and saving.

Each table has a section giving seasonally adjusted estimates to assist in the interpretation of the unadjusted estimates.

Gross domestic product and gross national income (Tables 1.1-1.3)

Table 1.1 shows the main national accounts aggregates, at current prices and chained volume measures where the reference year 2003=100.

Table 1.2, the expenditure approach to GDP at current prices and chained volume measures at 2003 prices shows consumption expenditure by households and government, gross capital formation and expenditure on UK exports by overseas purchasers. The sum of these items overstates the amount of income generated in the United Kingdom by the value of imports of goods and services; this item is therefore subtracted to produce gross domestic product at market prices.

When looking at the change in the economy over time, the main concern is usually whether more goods and services are actually being produced now than at some time in the past. Over time, changes in current price GDP show changes in the monetary value of the components of GDP and, as these changes in value can reflect changes in both price and volume, it is difficult to establish how much of an increase in the series is due either to increased activity in the economy or to an increase in the price level. As a result when looking at the real growth in the economy over time, it is useful to look at volume (or constant price) estimates of GDP. In constant price series, for all years the transactions are re-valued to a constant price level using the average prices of a selected year, known as the base year. National Accounts currently presents chained volume measures based to 2003.

Table 1.3, the income approach to GDP shows gross operating surplus, mixed income and compensation of employees (previously known as income from employment). Taxes are
added and subsidies are deducted to produce the total of the income-based components at market prices.

## Index numbers of output at constant market prices (Table 1.4)

Indices of the output of individual industries and services, valued at the prices of a base year, are combined using weights proportional to the contribution of each industry to gross domestic product in that year in order to derive an outputbased assessment of GDP.

The estimates in Table 1.4 are produced only on a quarterly, seasonally adjusted basis, except for production industries which are available monthly, unadjusted and seasonally adjusted and the distributive industries, which are available monthly, seasonally adjusted only. More detailed annual information is published once a year in Table 2.4 of United Kingdom National Accounts: the ONS Blue Book.

The 2003-based estimates of output in Tables 1.4, 7.1 and 7.2 are classified using industrial groups from the Standard Industrial Classification, revised 1992.

Additional chained volume measures 2003=100 output indices are available on the ONS Databank. Telephone 02075335673 for details.

Households' and non-profit institutions serving households' (NPISH) sector analysis - Distribution of income accounts (Tables 1.5-1.7)

The national accounts accounting framework includes the sector accounts which provide, by institutional sector, a description of the different stages of the economic process from production through income generation, distribution and use of income to capital accumulation and financing. Tables 1.5-1.6 show the allocation of primary income account and the secondary distribution of income account for the households sector. Additionally, Table 1.7 shows the use of income account for the households sector.

The secondary distribution of income account describes how the balance of income is allocated by redistribution; through transfers such as taxes on income, social contributions and benefits and other current transfers. The balancing item of this account is gross disposable income (B. 6 g ). Gross disposable income at constant prices is shown as real households' disposable income.

Table 1.7 shows, for the households sector, the use of disposable income where the balancing item is saving (B.8g).

## Households' and non-profit institutions serving households' (NPISH) consumption expenditure at current and constant prices (Table 1.8)

Households' and NPISHs' consumption expenditure is a major component of the expenditure measure of gross domestic product at current and constant prices (Table 1.2).

Households' final consumption expenditure includes the value of income-in-kind and imputed rent of owner-occupied dwellings but excludes business expenditure allowed as deductions in computing income for tax purposes. It includes expenditure on durable goods, for instance motor cars, which from the point of view of the individual might more appropriately be treated as capital expenditure. The only exceptions are the purchase of land and dwellings and costs incurred in connection with the transfer of their ownership and expenditure on major improvements by occupiers, which are treated as personal capital expenditure.

The estimates of households' consumption expenditure include purchases of second-hand as well as new goods, less the proceeds of sales of used goods.

The most detailed figures are published quarterly in Consumer Trends.

## Change in inventories (Table 1.9)

This table gives an analysis of the values of entries into inventories (stocks) less the value of withdrawals and the value of any recurrent losses of goods held in inventories. The analysis is presented by industry with an additional asset breakdown for the manufacturing industries.

## Gross fixed capital formation (Table 1.10)

Gross fixed capital formation comprises expenditure on the replacement of, and additions to, fixed capital assets located in the United Kingdom, including all ships and aircraft of UK ownership.

## Business Investment (Tables 1.11-1.15)

The Business Investment figures are principally based on the results of the Quarterly Capital Expenditure inquiry, but also include data from DCLG, DEFRA, DTI, HM Revenue and Customs and others.

The quarterly inquiry provides estimates for the private sector (both manufacturing and non-manufacturing) component of business investment, based on information supplied to ONS by a sample of companies. The figures for the latest complete year

## Definitions and explanatory notes

and succeeding quarters are based on the quarterly inquiry, but can be revised when results from the annual surveys, and GDP input-output balancing process become available. Annual surveys such as the Annual Business Inquiry, have more comprehensive coverage and are used, to benchmark the quarterly survey data.

The series published are net capital expenditure figures representing capital acquisitions less receipts from sales of vehicles and other capital equipment together with expenditure on leased assets and new building work. Spending on land and existing buildings is excluded.

The private sector estimates exclude expenditure on dwellings.
The quarterly figures at current prices are revalued in chained volume terms and are seasonally adjusted.

## 2. Population and vital statistics

## Population (Tables 2.1-2.2)

Population estimates for mid-1992 to mid-2000 (released 7 October 2004) and mid-2001 to mid-2002 (released 9 September 2004) were revised in light of the Local Authority Population Studies. The Local Authority Population Studies were designed to improve population estimates in the areas that proved hardest to count in the 2001 Census. A full report can be found on the National Statistics website at: www.statistics.gov.uk/about/Methodology_by_theme/ LAstudies.asp.

## Population

Population Estimates for mid-2005 for the United Kingdom and England and Wales was released 24 August 2006. More information on population estimates can be found on the ONS website at: http://www.statistics.gov.uk/STATBASE/Product. asp?vInk=601.

## Definition of resident population

The estimated resident population of an area includes all people who usually live there, whatever their nationality. People arriving into an area from outside the UK are only included in the population estimates if their total stay in the UK is 12 months or more. Visitors and short-term migrants (those who enter the UK for 3 to 12 months for certain purposes) are not included. Similarly, people who leave the UK are only excluded from the population estimates if they remain outside the UK for 12 months or more. This is consistent with the United Nations recommended definition of an international long-term migrant. Members of UK and non-UK armed forces stationed in the UK are included in the population and UK
forces stationed outside the UK are excluded. Students are taken to be resident at their term time address.

The population estimates are updated annually. The current series are based on the 2001 Census.

Figures for the United Kingdom do not include the population of the Channel Islands or the Isle of Man.

## Births, marriages and deaths (Tables 2.3-2.4)

Live births for England and Wales relate to numbers occurring in a period; for Scotland and Northern Ireland, figures relate to those registered in a period. Marriages are those solemnised in England and Wales during the calendar years shown.

By law, births must be registered within 42 days in England and Wales, within 21 days in Scotland, and within 42 days in Northern Ireland. In England and Wales, where a birth is registered later than the legal time period, and too late to be included in the count for the year of occurrence, it will be included in the count for the following year.

Birth figures for England and Wales separately, exclude events for persons usually resident outside England and Wales (214 in 2005). These events are, however, included in totals for England and Wales combined, and for the United Kingdom. From 1981 births to non-resident mothers in Northern Ireland are excluded from the figures for Northern Ireland, and the United Kingdom.

Total and infant deaths figures are all those registered in the United Kingdom in each specified period.

Stillbirths are excluded throughout.

## 3. Labour market

## The impact of Census 2001 on Labour Force Survey data (Tables 3.1, 3.9 and 3.12)

The first results of the 2001 Census, published on 30 September 2002, showed that previous estimates of the total UK population were around a million too high. This was mainly due to the overestimation of the net flow of international migrants into the United Kingdom. Estimates of employment and unemployment levels from the LFS released before 30 October 2002 are therefore too high, with rates also affected. This led to the Labour Force Survey (LFS) reweighting their estimates to the new population figures.

In September 2005, ONS published revised LFS time series which were a result of mid-year population estimates for 2004, and the seasonal adjustment review findings in 2005. For more information, see the article in Labour Market Trends, November 2005: www.statistics.gov.uk/CCI/article.asp?ID=1237\&Pos=1\&C olRank=160 .

In August 2006, ONS published the mid-year population estimates for 2005. These estimates have now been incorporated into the LFS estimates from Autumn 2004. Further details can be found at: www.statistics.gov.uk/cci/ article.asp?id=1647.

## Labour market activity (Table 3.1)

Employment - people aged 16 or over who did some paid work in the reference week of the survey whether as an employee or self-employed; those who had a job that they were temporarily away from (on holiday, for example); those on government-supported training and employment programmes; and those doing unpaid family work.

Employees - the division between employees and selfemployed is based on survey respondents own assessment of their employment status.

Self-employed - see employees.
Unpaid family workers - the separate identification of this group in the LFS is in accordance with international recommendations. The group comprises persons doing unpaid work for a business they own or for a business that a relative owns.

## Government-supported training and employment

 programmes - comprise all people aged 16 and over participating in one of the Government's employment and training programmes administered by the Learning Skills Councils (LSCs) in England, Education and Learning Wales (ELWAs) in Wales and Local Enterprise Companies (LECs) in Scotland.Unemployment - the International Labour Organisation (ILO) measure of unemployment used refers to people without a job who were available to start work in the two weeks following their LFS interview and who had either looked for work in the four weeks prior to interview or were waiting to start a job they had already obtained. This definition of unemployment is in accordance with that adopted by the 13th International Conference of Labour Statisticians (ICLs), further clarified at the 14th ICLS, and promulgated by the ILO in its publications.

Economically active - people aged 16 and over who are either in employment or unemployed.

Economically inactive - people who are neither in employment nor unemployed on the ILO measure. This group includes, for example, all those who are looking after a home or who are retired. Although no estimates appear in this supplement, for other LFS analyses this group would also include all people aged under 16.

## Workforce jobs (Tables 3.2-3.3)

The Workforce jobs (WFJ) series provides estimates for the number of jobs in the UK economy and is the source recommended by the Office for National Statistics for both the number of jobs and the industrial composition of jobs.

WFJ is the sum of employee jobs, self-employment jobs, HM forces and government supported trainees. Total workforce jobs are available by gender and broad industry. Civilian workforce jobs are available by geographical region, gender and broad industry.

The Workforce jobs series is compiled from several sources, including both household and business surveys and administrative sources. Employee jobs is by far the largest component as it is mainly derived from business surveys. Selfemployment figures are provided by the Labour Force Survey, as are employee jobs estimates for the construction and agriculture industries. Statistics on government-supported trainees and HM Forces come from administrative sources.

Statistics are available annually from 1959, quarterly from June 1978, and for the production industries monthly from September 1984. They are available from 1978 classified by Standard Industrial Classification. Results are currently available 11 weeks after the reference period. They are published in the Labour Market Statistics First Release. Further information from the series is published on the National Statistics website on NOMIS®, in Labour Market Trends, and in the Labour Market Statistics Regional First Releases. Labour Market Trends has been replaced from January 2007 by a journal called the Economic \& Labour Market Review (ELMR) available online and in print.

The Workforce Jobs series is designed to be comparable over its whole duration, and this, together with the accuracy of its industrial information, is its major strength. However, the series cannot provide detailed industrial breakdowns, which are best sourced from the Annual Business Inquiry (ABI). Additionally, there is no information available for geographies smaller than Government Office Regions (GORs).

Employee jobs - A measure of the number of jobs of employee status mainly collected from short term employment surveys. Figures on a Standard Industrial Classification basis are available from June 1978.

Short-Term Employment Surveys (STES) - STES has been run by the Office for National Statistics since June 1996, following on from the short period employment surveys conducted by the statistics division of the Department of Employment.

## Definitions and explanatory notes

Data is collected on the number of private sector employees from a sample of approximately 9,000 businesses in production industries each month and 30,000 businesses in the service and distribution industries each quarter.

The short-term series are benchmarked annually to the latest ABI estimates.

Annual Business Inquiry (ABI) - The $A B I$ samples approximately 78,000 businesses each year. The ABI replaced the Annual Employment Survey (AES) as the source of information on employee jobs from the survey year 1999. The AES (survey date in September) and ABI (survey date in December up to 2005 and moving back to September in 2006) provides local area data down to ward level for Great Britain and the United Kingdom.

Both the ABI and STES are sampled from the InterDepartmental Business Register (IDBR). The IDBR holds details of all businesses that run a PAYE tax system or register for VAT.

Public Sector Employment (PSE) - The Office for National Statistics (ONS) produces estimates of Public Sector Employment which are compiled from a multiplicity of administrative and survey information via the Quarterly Public Sector Employment Survey (QPSES). From the summer of 2005 UK Public Sector Employment Statistics have been published quarterly on the National Statistics website with breakdowns by sector (central government, local government, public corporations) and by industry (health, education, police etc.)

In December 2005 the definitive PSE series were integrated into Workforce Jobs within the standard industrial classifications (SIC) sections L, M and $N$; public administration and defence, education and health and social work. The rest of the PSE has been taken on in part where possible i.e. within division 64 (post and telecommunications) and division 92 (recreation, cultural and sporting activities). The PSE series are not benchmarked to the ABI.

Self-employment jobs - The Self-Employed, and the Construction and Agriculture Employee jobs series that feed into WFJ are supplied quarterly by the Labour Force Survey (LFS).

Labour Force Survey (LFS) - The LFS is a survey of households, it uses definitions from the International Labour Organisation (ILO). In any three month period a sample of approximately 135,000 people aged 16 and over in around

57,000 households are interviewed. The Construction series within WFJ is benchmarked using the Annual Business Inquiry; the Agriculture series is not benchmarked.

HM Forces - Represent the total number of UK service personnel, male and female, in HM Forces, wherever serving and including those on release leave. Administrative sources are supplied by the MOD. HM forces fall under section $L$ within workforce jobs but are not counted as employee jobs.

Government supported trainees - This category includes all participants on government training and employment programmes who are receiving some work experience on their placement but who do not have a contract of employment (those with a contract are included in the employee jobs series). Administrative sources are supplied by the DfES, DWP, the National Assembly for Wales and the Scottish Executive.

Northern Ireland - Civilian jobs are provided by DETINI

## Staff employed in the Civil Service (Table 3.4)

The table sets out Civil Service employment by government department on a full-time equivalent (FTE) basis. The estimates count all home Civil Service employees but exclude the Northern Ireland Civil Service, the Diplomatic Service and other Crown servants.

FTE estimates are based on converting part-time employees' hours into a full-time employees' equivalent and provide a better indicator of total labour input rather than a simple headcount.

Headcount statistics are available on the same basis from the regular quarterly Public Sector Employment First Release published on the National Statistics website.

## Intake and outflow of UK Regular Armed Forces Personnel (Table 3.5)

Table 3.5 shows intake to, and outflow from the UK Regular Armed Forces. This excludes all Gurkhas, the Home Service Battalions of the Royal Irish Regiment FTRS and Mobilised Reservists. Intake comprises all people joining the UK regular forces from civilian life, including those with previous service in the armed forces. Outflow comprises all those leaving the UK regular forces, and includes amongst other things those leaving before finishing training, voluntary release and retirement at the end of a contract. Some personnel who leave have a liability to service in the reserve forces.

## UK Armed Forces Full-time Strengths (Table 3.6)

Table 3.6 shows the full-time strength of the UK armed forces and the number of untrained personnel. The figures comprise UK regular forces (including nursing services), Gurkhas and fulltime Reserve Service (FTRS) personnel. FTRS personnel are reserves who have been called into full-time service for a limited period. No other reserves are included in this table. Figures exclude Home Service Battalions of the Royal Irish Regiment and Mobilised Reservists.

## Local authority staffing (Table 3.7)

Local authorities' employment figures for England and Wales are compiled using data supplied by the quarterly local authority survey conducted by ONS. Police service data for England and Wales are obtained from the Home Office. The source for Scotland is the Joint Staffing Watch survey by the Scottish Executive and COSLA (Convention of Scottish Local Authorities).

## Numbers of workers employed in agriculture (Table 3.8)

The table shows the number of persons doing agricultural work on agricultural holdings on the day of the census (this includes drainage, hedging and ditching, maintenance and repair work and the marketing of produce grown), together with supervisory and office staff, seasonal or casual workers, family and hired, who are not regular workers but are working on the holding on the census date and those supplied temporarily by agricultural contractors or gangmasters. Estimates for workers on minor holdings are included. The figures exclude gardeners, groundsmen, gamekeepers, grooms or similar estate workers, domestic staff employed in the farmhouse, schoolchildren or young workers engaged as trainees under an official scheme and not paid Agricultural Wages Board rates or more.

## Unemployment (Tables 3.9 and 3.12)

Unemployed - the International Labour Organisation (ILO) measure of unemployment used refers to people without a job who were available to start work in the two weeks following their LFS interview and who had either looked for work in the four weeks prior to interview or were waiting to start a job they had already obtained. This definition of unemployment is in accordance with the 13th International Conference of Labour Statisticians, further clarified at the 14th ICLS, and promulgated by the ILO in its publications.

## Claimant count (Tables 3.10, 3.11 and 3.13)

The figures published for the United Kingdom, Great Britain and Government Office Regions relate to people claiming
benefit (that is, Jobseekers Allowance and National Insurance credits) at Employment Service Offices on the day of the monthly count, who on that day were signed on as unemployed and satisfied the conditions for claiming benefit. Students claiming benefit during a vacation, but intend to return to full-time education, and temporarily stopped workers are excluded.

## Seasonally adjusted claimant count statistics

 (Table 3.13)The seasonally adjusted series of claimant count figures is adjusted to allow for discontinuities in coverage. In effect, the series takes the current coverage and estimates the position as if that coverage had been in force since 1971. The seasonally adjusted claimant count figures relate only to claimants aged 18 and over, in order to maintain a consistent series. (See the November 1995 issue of Labour Market Trends. For more detail see the December 1996 issue of the Employment Gazette, now Labour Market Trends).

## Vacancies unfilled (Table 3.14)

The vacancy figures shown in Table 3.14 do not represent all the vacancies in the economy but only those vacancies notified to Jobcentres (including 'self-employed' opportunities created by employers) and Careers Offices and remaining unfilled on the day of the count. Nationally it is estimated that about a third of all vacancies are notified to Jobcentres.

Vacancies notified to Jobcentres are mainly for adults but include some that are suitable for young persons, while vacancies notified to Careers Offices are suitable for young persons but include some that are suitable for adults. Because of possible duplication the two series should not be added.

For Northern Ireland the table shows unfilled vacancies notified to the local offices of the Northern Ireland Department of Economic Development.

## Labour disputes (Table 3.15)

## Definition of disputes

The statistics cover stoppages of work in the United Kingdom caused by labour disputes between employers and workers, or between workers and other workers, connected with terms and conditions of employment.

Disputes which do not result in a stoppage of work, for example, work to rules and go slows, are not included in the statistics, as their effects are not quantifiable to any degree of certainty.

Stoppages involving fewer than 10 workers or lasting less than one day are excluded from the statistics unless the total number of working days lost in a dispute is 100 or more.

## Definitions and explanatory notes

Stoppages over issues not directly linked to terms and conditions are excluded from the statistics though in most years this is not significant. For example, in 1986 one stoppage (a protest in the coal industry against the visit of an MP) was judged to be political and excluded from the figures. The total working days lost amounted to less than 1,000. The statistics include 'lock-outs' (that is, where the employer prevents his employees from working by refusing entry to the place of work) and 'unlawful', i.e. unlawfully organised strikes.

## Working days lost

In measuring the number of working days lost, account is taken only of the time lost in the basic working week. Overtime work is not included, and neither is weekend working where it is not a regular practice. Where an establishment is open every day and operates two or more shifts, the statistics will record the number of working days lost for each shift. In recording the number of days lost, allowance is made for public and known annual holidays, for example, factory fortnights, occurring within the strike's duration. Allowance is not normally made for absence from work for such reasons as sickness and unauthorised leave, unless this information is readily available.

Where strikes last less than the basic working day, the hours lost are converted to full day equivalents, as are days lost by part-time workers. The number of working days lost in a stoppage reflects the actual number of workers involved at each point in the stoppage. This is, in general, less than the total obtained by multiplying the duration of the stoppage by the total number of workers involved at any time during the stoppage because some workers would not have been involved throughout.

## Number of stoppages

There are difficulties in ensuring complete recording of stoppages, in particular for short disputes lasting only a day or so or involving only a few workers. Because of this recording difficulty and the cut off applied in the recording process, the number of working days lost is considered to be a better indicator of the impact of labour disputes than the number of recorded stoppages.

## Workers involved

The figures for workers involved relate to persons both directly and indirectly involved at the establishments where the disputes occurred. Workers indirectly involved cover those who are not themselves parties to the dispute but are unable to work as a result of the dispute; workers at other sites who are indirectly affected because, for example, of a shortage of materials, or temporary lack of demand are excluded entirely. This is partly because of the difficulty in deciding to what
extent a particular firm's production problems are due to the effects of a strike elsewhere or some other cause. Workers involved in more than one stoppage during a year will be included in the statistics for each stoppage in which they take part. Part-time workers are counted as whole units.

A more detailed analysis of stoppages caused by labour disputes in 2002 can be seen on pages 285-298 in the June 2003 issue of Labour Market Trends.

## 4. Social services

## National Insurance and Child Benefit (Table 4.1 and 4.3)

## Unemployment Benefit/Jobseeker's Allowance

Jobseeker's Allowance (JSA) replaced Unemployment Benefit and Income Support for unemployed people on 7 October 1996. To be entitled to Jobseeker's Allowance, a person must: be available for work, be capable of working or be actively seeking work and enter into a Jobseeker's Agreement. Men should be aged under 65 and women under 60. You normally cannot claim Jobseekers Allowance if you are aged under 18. You also must be not currently working or if you are, be working an average of less than 16 hours a week.

Awards of JSA are either contribution-based or income-based. Those who have paid sufficient National Insurance contributions get contribution-based JSA, at a personal rate for six months. Those who do not qualify for, or whose needs are not met by contribution-based JSA may qualify for incomebased JSA for themselves and their dependants according to need and their personal savings. Since April 2003, allowances for child dependants of income-based JSA claimants have increasingly been paid through the Child Tax Credit. The income-based element is paid as long as needed, provided that the qualifying conditions continue to be met.

## Sickness, Invalidity and Incapacity Benefit (Table 4.1)

These benefits are payable to claimants who are incapable of work through illness or injury.

Since 6 April 1983, most people who are employed and paying National Insurance contributions receive Statutory Sick Pay (SSP) from their employer when off work sick.

SSP is payable for a maximum of 28 weeks. Those excluded from the SSP scheme, e.g. the self employed, unemployed, employees with short term contracts or those whose SSP has terminated but are still sick, may claim Incapacity Benefit (IB).

Incapacity Benefit replaced Sickness Benefit (SB) and Invalidity Benefit (IVB) from 13 April 1995. It is paid to people who are
assessed as being incapable of work and have satisfied the contribution conditions. Neither SSP nor IB is payable for the first three days of any period of sickness. Those who do not satisfy the contribution conditions can still go on to receive National Insurance credits only.

To receive SB or IVB a person must have satisfied the same contribution conditions as for IB, but in addition to this, those who were incapable because of an industrial accident or prescribed disease had their contribution conditions deemed as satisfied.

Sickness Benefit was payable for the first 28 weeks of incapacity to those who satisfied the contribution conditions, but were excluded from Statutory Sick Pay (SSP). Invalidity Benefit was payable after 28 weeks SB or SSP.

Incapacity Benefit is paid at three rates: IB Short Term (Low) (IBST(L)) paid for the first 28 weeks of incapacity; IB Short Term (High) (IBST(H)) paid for the following 24 weeks; and IB Long Term (IBLT) paid after one year. People with a terminal illness or who are receiving the higher rate care component of Disability Living Allowance receive IBLT rate from week 29. For people over state pension age, the short-term rate of IB based on Retirement Pension entitlement, is paid for up to a year. The long-term rate is not paid for people over pension age.

The number of first doctors' statements measures the number of 'new claims' and self-certificates received at local DWP offices. Cases where a certificate is received but benefit is not payable are included in the statistics as they indicate incapacity for work.

A person who is long-term sick and does not satisfy the contribution conditions for IB, may be entitled to Severe Disablement Allowance (SDA). Claims to SDA are not counted in the figures for IB.

SDA is not available to new claimants from 6 April 2001. From this point, disabled people, whose period of incapacity begins before the age of 20 (or 25 if in education or training before the age of 20), may be able to receive Incapacity Benefit without having to satisfy the National Insurance contribution conditions. SDA recipients aged below 20 at the cut-off point transferred to IB at the long-term rate from April 2002. Existing recipients can continue to receive the benefit for as long as they satisfy the conditions of entitlement for the benefit.

## State Pensions (Table 4.1)

State Pensions, as the name implies, are payable on making a claim provided the state pension age ( 65 for men, 60 for women) has been reached and the necessary contribution conditions are satisfied.

A married woman, who does not qualify, or only partially qualified, for a pension in her own right, can receive a pension through her husband's insurance provided that the age conditions are satisfied by both and both make a claim for their pension.

## Widows' pensions

This is only paid to widows already claiming as of $9^{\text {th }}$ April 2001 and these are payable, only subject to certain conditions, from the date of widowhood. A widow's pension can continue unless the widow remarries, cohabits or until she reaches the age of 65 when it is replaced by a State Pension. However, between age 60 and 65 a widow may choose to receive either her widow's pension or State Pension. A widowed mother's allowance continues generally speaking so long as a widow has at least one qualifying child of school age.

## Widowed Mothers' Allowances

Widowed Parent's Allowance - replaced Widowed Mothers' Allowance and includes a basic allowance, an allowance for each dependant and an addition to the State Pension.

Widowed Parent's Allowance is a weekly payment made to a widow, widower or surviving civil partner with dependent children. Your husband, wife or civil partner must usually have died on or after $9^{\text {th }}$ April 2001. However, if you are a man and your wife died before this date, you were under 65 when she died and you did not re-marry before $9^{\text {th }}$ April 2001, you can also claim Widowed Parent's Allowance.

## Bereavement Benefit

Bereavement Benefit was introduced on the $9^{\text {th }}$ April 2001. It is payable to both men and women. You are entitled to a Bereavement Payment if your husband, wife, or civil partner who has died paid enough national insurance contributions. If they died as the result of an industrial accident or an industrial disease, it does not matter whether they paid enough contributions or not. To get Bereavement Payment you must have been below state pension age when your husband, wife or civil partner died, or - if you were over pension age - they must not have been entitled to state retirement pension, based on their own national insurance contributions, when they died. Pension age is 60 for a woman and 65 for a man. You must have been married to your husband or wife, or in a registered civil partnership with your partner when they died.

## Child and Working Tax Credit (Table 4.2)

Child and Working Tax Credits have replaced Working Families' Tax Credit.

Child Tax Credit provides support to families for children.

## Definitions and explanatory notes

Working Tax Credit tops up earnings of families on low or moderate incomes. People working for at least 16 hours a week can claim if they are responsible for at least one child, have an illness or disability which puts them at a disadvantage in getting a job. Other adults also qualify if, for example, they are aged at least 25 and work for at least 30 hours a week.

A family is defined as being in work at the reference date if one of the adults, or a single adult, works for at least 16 hours per week. Figures for out of work families are not included in the table.

The figures in the table are estimates based on data for a random sample of $10 \%$ of individuals with awards at the reference date, extracted from the computer system on that date. The reference date will be as near as possible to the first Monday in April and December.

The final annual awards will generally not be known until after the end of the year when all the circumstances for the year are finally established. This table covers families with positive awards at the reference date. Families eligible for, and having claimed Child Tax Credits or Working Tax Credits but whose awards are tapered to zero are not included.

## Income Support (Table 4.3)

Income Support is an income related benefit for people aged from 16 years up to age 60 that are on a low income.

Income Support for claimants aged 60 or over was replaced by Pension Credit in October 2003.

Conditions for entitlement are set out in the Income Support Regulations. However, in general Income Support may be paid to a person in Great Britain, aged 18 or over (or in prescribed circumstances aged 16 or 17), who has left school and whose entitlement is below their applicable amount, as specified by Income Support Regulations. Income Support is not payable where the claimant, or their partner, works for 16 hours or more a week (with certain exceptions). Savings over $£ 16,000$ usually mean you cannot get income support.

Since April 2003, allowances for child dependants of Income Support claimants have increasingly been paid through the Child Tax Credit.

## Pension Credit (Table 4.3)

Pension Credit is a non-contributory, income related benefit which was introduced in October 2003 and replaced the Minimum Income Guarantee. It was designed to lift the poorest pensioners out of poverty by providing a contribution to a minimum guaranteed income for those aged 60 and over
living in Great Britain and to reward those aged 65 and over who have made modest provision for their retirement.

Guarantee Credit replaced the Minimum Income Guarantee (MIG) on 6 October 2003. It provides, or contributes to, a guaranteed level of income. People aged 65 or over may be entitled to receive Savings Credit, this rewards pensioners who have modest income from savings, investments or a second pension.

## Family health services (Table 4.4)

## Pharmaceutical services

England and Wales. The data up to 1990 are based on fees and include prescriptions dispensed by community pharmacists and appliance contractors only. Figures from 1991 onwards are based on items and cover all prescriptions dispensed by community pharmacists, appliance contractors, dispensing doctors and prescriptions submitted by doctors for items personally administered.

England. The prescription information was obtained from the Prescription Cost Analysis (PCA) system and is based on a full analysis of all prescriptions dispensed in the community in England. The vast majority of prescriptions are written by general medical practitioners in England, however prescriptions written by dentists, nurses, hospital doctors and, up to March 1994, armed services doctors and dentists are included, provided they were dispensed in the community. Also included are prescriptions written in Wales, Scotland, Northern Ireland and the Isle of Man but dispensed in England. The data do not cover drugs dispensed in hospital or private prescriptions.

Further information on prescriptions dispensed in the community in England can be obtained from the Statistical Bulletin on prescriptions. The latest version covers the period 1995 and was published in July 2006. The bulletin gives information about the total numbers and cost of prescriptions, provides full notes on sources and definitions, and presents the statistics in the form of reference tables, charts and diagrams with commentary. The text concentrates in changes over the last year and in addition to the areas covered in the table examines free and charged prescriptions, prescriptions per head by broad age groups, trends in leading therapeutic groups and selected drug groups.

The Health and Social Care Information Centre publishes an annual booklet, currently Prescription Cost Analysis England 2004, giving numbers of prescription items dispensed within therapeutic class at individual presentation level.

Further details about prescription statistics can be obtained from Glen Scrivener, Prescribing Support Unit, Tel: 0113 2547143 or by e-mailing: prescribing @ic.nhs.uk.

Scotland. From 1993 the data includes prescriptions dispensed by chemists, appliance suppliers, dispensing doctors and stock orders. Further details about prescription statistics can be obtained from the Healthcare Information Group, Information Services Division, Telephone: 0131275 6542, Fax: 01312757606.

Wales. Further details on the subjects in this table can be obtained from Vivien Trew, National Assembly for Wales, Telephone: 02920825080.

## Dental services

The courses of treatment are for the General Dental Service (GDS) and the Personal Dental Service (PDS).

A Course of Treatment (COT) is defined as:
(a) an examination of a patient, an assessment of their oral health, and the planning of any treatment to be provided to that patient as a result of that examination and assessment; and
(b) the provision of any planned treatment (including any treatment planned at a time other than the time of the initial examination) to that patient.

Each CoT was associated with a single claim form (the FP17 form) which was submitted by dentists to the BSA to perform its monitoring and payment functions. Under the old contractual arrangements, counts of dental activity (COT) were based on per item of service. As from 1 April 2006, CoT are based on the most complex component of the overall service provided.

## Dental services in Scotland

The NHS General Dental Service (GDS) is usually the first point of contact that patients have with dental treatment. Patients register with an NHS General Dentist (a "High Street dentist") to receive the full range of NHS treatment provided by dentists who are independent contractors working on behalf of the local NHS Boards. There are also a number of salaried dentists working in the GDS, who provide an alternative service to the contracted General Dental Practitioners in order to meet the needs of the local population. Patients register with an NHS dentist to receive the full range of dental treatment available under the NHS GDS. All registrations lapse after 36 months, unless the patient returns to the practice. Adults make no financial contribution to their registration fees, which are paid in full by the local NHS board, and children are exempt from charges altogether. Adults are charged $80 \%$ of the cost of
their treatment up to a maximum amount ( $£ 384$ during 2005/06), unless they are exempt or entitled to remission.

## General ophthalmic services

These services provide for the testing of sight and the issue of vouchers to certain eligible patients. The vouchers can be redeemed against the cost of glasses. These services operate in conjunction with the Hospital Eye Service which provides for the diagnosis and treatment of diseases or defects of the eyes and for the supply of optical appliances.

From 1 July 1986 the provision of glasses under the GOS ceased, and was replaced by a system of vouchers which can be exchanged for full or part payment against the cost of spectacles. People eligible for vouchers are children aged under 16, students aged 16-18 in full time education, patients requiring complex lenses and persons entitled to full or part remission of charges on the grounds of low income including those in receipt of Income Support, Tax Credit, Pension Credit guarantee credit and Income Based Job Seekers Allowance.

From 1 April 1989 GOS sight testing was restricted to those patients who were eligible for vouchers, plus those patients who are registered blind or partially sighted, patients who suffer from glaucoma or diabetes and those aged 40 and over who are close relatives of glaucoma sufferers. From 1 April 1999, eligibility for GOS sight tests was extended to all patients aged 60 or over.

Sights tests provided and vouchers issued for spectacles under General Ophthalmic Services (GOS) in Scotland (Table 4.4)

On 1 April 2006, a new NHS eye examination was introduced and entitlement was extended to all in Scotland. The traditional NHS "sight test" has been replaced by a comprehensive eye examination appropriate to the patient's needs. An initial eye examination is carried out (primary eye examination), and where necessary this is followed by a second eye examination (secondary eye examination). Entitlement to a voucher is, with the exception of children and those who require complex lenses, based on income.

## 5. Law enforcement

## Recorded crime (England and Wales) (Table 5.1)

Recorded crime statistics cover the more serious criminal offences. All offences that are triable on indictment and triable-either-way are now included as are a few summary offences which are closely linked to more serious offences (e.g. unauthorised taking of a motor vehicle; theft of a motor vehicle).

## Definitions and explanatory notes

The counting rules for recorded crime were revised on 1 April 1998 with an expanded coverage of offences and the emphasis more on measurement of one crime per victim. The changes generally caused an increase in the number of crimes counted, mainly impacting on the violence against the person, fraud and forgery, drug offences and "other" offences groups.

The National Crime Recording Standard was introduced nationally on 1 April 2002, with the aims to promote greater consistency between police forces in the recording of crime, and again to take a more victim-oriented approach to crime recording. The Standard had the overall effect of increasing the number of crimes recorded. The crime category most affected was violence against the person (for further details, see figure 3.7 in 'Crime in England and Wales 2003/04', Home Office Statistical bulletin 7/03). Some police forces adopted the principles of the Standard in advance of its national implementation, and so this will have affected figures for earlier years, particularly 2001/02.

Statistics of recorded crime represent those offences that have been recorded by the 43 Home Office police forces in England and Wales. Statistics from 2002/03 onwards contain figures for the British Transport Police. Offences recorded by non-Home Office forces such as the Ministry of Defence Police are not included unless they have also been recorded by a Home Office force.

## Crimes and offences recorded by the police (Scotland) (Table 5.2)

All crimes and offences involve contraventions of the criminal law; the term 'crimes' covers the more serious criminal acts (in many cases, contraventions of Scottish common law e.g. housebreaking) and 'offences' the less serious acts (often contraventions of statutory law e.g. Road Traffic legislation).

The counting system in Scotland is offence-based rather then incident-based. In one criminal incident, several crimes or offences may occur, e.g. a house may be broken into, vandalised and the owner assaulted. In these multiple incidents, all the offences are counted rather than simply the main offence for the incident as a whole.

The definition of serious assault was amended at the start of 1990 to improve consistency between forces. Serious assaults are included in the category 'Non-sexual crimes of violence'; petty assaults are included in the category 'Miscellaneous offences'.

## Offending while on bail (Scotland) (Table 5.2)

A legislative change that came into force on 1 April 1996 has altered the way in which offending while on bail is recorded in

Scotland. Prior to this date offences of "offending while on bail" were recorded at the initial stage of the criminal justice process and were included in the recorded crime figures provided by the police. The change in legislation no longer requires such offences to be recorded at this stage; offending while on bail is now regarded as an aggravating factor at the sentencing stage. The historical recorded crime data has been revised to reflect this change to enable comparisons of recorded crime figures across years.

## 6. Agriculture, food, drinks and tobacco

## Agricultural land (Table 6.1)

## Area

Figures relate to all known main agricultural holdings, and including estimates for minor holdings.

Horticultural crops include vegetables grown in the open, small fruit, hardy nursery stock, bulbs and flowers grown in the open and area under glass or plastic covered structures.

The figures for specific crops relate to those which are actually in the ground on the date of the June Survey or for which the land is being prepared at that date. Any catch crops grown for livestock feed or for ploughing-in the period between the harvest and the sowing of the next season's main crop will not be shown in the returns of agricultural area. The case is similar for horticultural crops.

Individual crop areas are returned to the nearest 0.1 hectare and include headlands and ditches attributable to the particular crop.

## Agricultural crops (Table 6.2)

## Yield and production

In England and Wales cereal production is estimated from sample surveys held in August or September, November and April. Production figures in Table 6.2 are rounded to the nearest 10,000 tonnes for wheat and barley and all other crops to the nearest 1,000 . Sugar beet yield and production estimates are provided by British Sugar plc. Potato yield and production estimates are derived from figures provided by the British Potato Council. For remaining crops, yields are estimated by technical officers in the Department for Environment, Food and Rural Affairs (DEFRA). These are combined with area figures from the annual June agricultural census to produce production estimates. Scottish and Northern Ireland figures for cereals, oilseed rape, linseed and peas are based on sample surveys of farms, and other crop production figures are based on the estimated yields of crop reporters. Provisional estimates
are prepared for all countries in November and are made on a county or regional basis in England and Wales and by region for Scotland. Final figures are normally published in December in the year following the harvest. For Northern Ireland they are published in the December of the harvest year.

## Horticultural crops (Table 6.2)

Cropped area and production
The area is the 'planted' area, on which the crops are actually growing, rather than the Ordnance Survey 'field' area.

The yield referred to is the average tonnage actually harvested, or yet to be harvested, for each 'planted' hectare.

Harvested yields are reduced to exclude any 'pre-harvest wastage' such as crops left on the trees/ in the ground, to equate to all produce that has some value. For example, crops to be sent for juicing, or for stockfeed, are included.

Production in England and Wales is calculated by multiplying the yield estimates supplied by Horticultural Crop Intelligence Committees (HCICs) by the appropriate planted area. These areas are based on one or more of the regular Surveys covering horticultural crops, on estimates made by the HCICs and other horticultural advisory sources.

In Scotland the quantity harvested is calculated for four crops (raspberries, strawberries and tomatoes and peas for processing) by applying harvested yield estimates based on the results of a sample survey to areas returned at the June Survey, after making adjustments where necessary for double cropping. For other fruit and vegetables yield estimates are supplied by technical officers of the department. In Northern Ireland the quantity harvested of all fruit and vegetables is calculated by multiplying yield estimates supplied by technical officers of the DEFRA by the crop areas obtained from the June Survey.

In Table 6.2, yields are estimated average gross yields, i.e. the weight of crop that was available for harvesting from each hectare cropped during a single crop year. No deductions are made for the possibility that some of the crop was not harvested or for losses following harvest.

Gross production is the product of yields and field areas. For some vegetable crops, the areas under production may produce more than one crop during a single season and will therefore be greater than the areas measured by the June Survey (i.e. Table 6.1) by a factor equalling the number of crops harvested in any given year. Also, some areas may be double cropped (one crop followed by a different crop). Figures represent the maximum available supply during a single crop year, nominally the period

1 June to 31 May, the period during which the bulk of the crop is harvested, although the short extension of two or three weeks that may occur at either end of this nominal period would also be included in the crop year totals.

## Livestock (Table 6.3)

The table shows the number of cattle, sheep, pigs and poultry as returned by occupiers of agricultural holdings defined previously under the heading 'Agricultural land'.

In Table 6.3, 'Barren sows for fattening' in Northern Ireland were included with 'All other pigs' prior to 1993.

## Animals slaughtered and meat produced (Table 6.4) Animals slaughtered

The figures are those of animals and poultry slaughtered in the United Kingdom, including imported fat animals. They are derived from returns recording slaughtering in licensed slaughterhouses, including bacon factories. Unrecorded domestic slaughter and slaughtering knackeries are excluded, as are animals not slaughtered for human consumption.

## Meat produced

The figures represent the estimated production of carcass meat and offal from slaughtering, as defined in the preceding paragraph, and from information available on dressed carcass weights. Pig meat used for the production of bacon and ham is excluded.

## Cereals and cereal products (Table 6.5)

## Sales of home-grown grains for food

For wheat the receipts of homegrown supplies by flour millers are shown and small quantities subsequently sold again for animal feed are therefore included. For barley the receipts of home-grown supplies by brewers, maltsters, flakers, roasters, distillers and pot barley manufacturers are shown and exported supplies are included. For oats the receipts by oatmeal millers of home-grown supplies for processing into human food are shown.

## Wheat and oat milling

The tables show the quantities of home-produced and imported wheat milled and the amount of flour produced; the resulting production of wheat offals appears in the table of animal feedingstuffs. Stocks of wheat and flour include wheat and flour expressed in terms of wheat held by flour millers, cereal breakfast foods manufacturers, and importers and dealers. Flour disposals include exports. The stocks held by importers and dealers are included.

## Definitions and explanatory notes

Only the quantities of oats used in establishments milling primarily for human food are included in the series described as oats milled. The products of oat milling are similarly restricted to all cuts of oatmeal, flakes, rolled oats, oatflour, groats and any other product produced for human food. Stocks of oats are those held by main processors, including oatmeal millers, provender millers and compound feedingstuffs manufacturers. The provender millers' figures relate to Great Britain only. Stocks held by importers and dealers are also included.

## Barley

Disposals for food and brewing refer to the quantities of homegrown and imported grain used by brewers, maltsters, flakers, roasters, distillers and pot barley manufacturers. Exports are included. Stocks are those held by main processors, including brewers, maltsters, distillers, provender millers and compound feedingstuffs manufacturers. The provender millers' and compounders' figures are in respect of Great Britain only. Stocks held by importers and dealers are also included.

## Breakfast cereals

Figures exclude oatmeal and oatmeal flakes.

## Compound feedingstuffs (Table 6.6)

The figures relate to the United Kingdom; only production for commercial sale is included. Compound feedingstuffs include grain balancers and concentrates.

## Potatoes (Table 6.7)

The figures relate to the United Kingdom; those for Great Britain have been provided by the British Potato Council, and those for Northern Ireland by the Department of Agriculture for Northern Ireland.

Sales of potatoes from farms are the quantities sold for food, for processing and for export. They include an estimate for human consumption in farm households. Production on allotments and gardens, potatoes used for seed and potatoes fed to livestock are excluded.

Disposals for food in the United Kingdom are the total quantities of potatoes moving into human consumption from all recorded sources, together with estimates of unrecorded sales. Potatoes processed for export are included within the export figures.

## Sugar (Table 6.7)

Production relates to white and raw sugar (expressed in terms of white) from home-grown sugar beet, within quota as recorded by British Sugar plc.

Disposals for food in the United Kingdom are adjusted by the net trade in imports/exports of sugar contained in processed products and refer to the total UK consumption, excluding use by non-food industries.

The 'Total Disposals' figure relates to the total UK consumption, including non-food industries.
'Stocks' include imported and home-produced supplies of refined and raw sugar (expressed in terms of refined) held in the United Kingdom.

## Glucose (Table 6.7)

The figures cover the production of liquid and solid glucose and dextrose monohydrate.

## Bacon and ham (Table 6.8)

Production figures relate to the output of curing factories from both home-killed and imported carcasses.

## Meat stocks (Table 6.8)

Beef and veal, mutton and lamb, pork and offal.
Until March 2006 the figures represent the stocks of meat from home-produced and imported sources held in public cold stores, including stocks of beef held for intervention.

No information is available on stocks of these commodities held in cold stores reserved for private concerns. Tremendous changes in the food distribution network and emergence of the very large retailing chains with their own extensive storage facilities means that the stocks held in them may be considerable.

The stocks held in Public Coldstores in the United Kingdom Survey was discontinued in March 2006. As a result, stocks data is no longer published.

## Fish (Table 6.9)

Fresh and frozen UK landings of fish are expressed in terms of live weight equivalent.

## Oilseeds and nuts (Table 6.9)

Crushed and crude oil produced. These two columns show the quantities of oilseeds and nuts processed by crushing and the amount of crude oil produced from the crush by expelling and extraction.

Stocks. Stocks of oilseeds and nuts held by crushers; (expressed as crude oil equivalent).

## Vegetable oil (Table 6.9)

Disposals (expressed as crude oil equivalent) Disposals measures the amount of vegetable oil available for domestic use and for exports. Disposals are derived from production by oilseed crushers, from imports of crude and refined oils, and from changes in stocks. They include oil that will be refined and used in the manufacture of margarine, other table spreads, solid cooking fat and other food. They also include crude vegetable oil used for industrial purposes, such as the manufacture of paint, ink, pharmaceutical products and soap.

Stocks (expressed as crude oil equivalent)
Stocks include all manufacturers stocks of vegetable oils including those held by crushers, refiners and producers of margarine, etc.

## Marine oil (Table 6.9)

Usage. This column shows the quantities of marine oils used to produce margarine, other table spreads and solid cooking fats.

Stocks. Stocks include oil held by hardeners and refiners of oil, and manufacturers of margarine, solid cooking fat and other table spreads.

## Production of margarine, other table spreads and solid cooking fat (Table 6.9)

Production. These columns show the production for each of these three products.

## Milk and milk products (Table 6.10)

## Milk

The figures cover milk sold for use as liquid milk and the manufacture of milk products. The quantity consumed by farm households and used on farms for butter and cream production or calf rearing is excluded.

## Milk products

Figures for butter and cheese relate to the output of UK dairy companies and are based on the volume of whole milk and milk fractions utilised for butter and cheese production; production of butter and cheese on farms is excluded. Figures for processed cheese are excluded as this is the re-manufacture of home produced and imported cheese. Butter and cheese stocks represent quantities in public cold stores surveyed by DEFRA and exclude stocks in private stores which may be considerable. Please note that the Public Cold Stores Survey ceased in mid 2006 due to the unreliability of data.

The condensed milk and milk powder figures relate to quantities produced from full-cream or skimmed milk. The condensed and evaporated milk figures are for whole and
skimmed milk. Stock figures refer to manufacturers' stocks only. The figures for skimmed milk powder exclude buttermilk and whey powder.

## Hen eggs (Table 6.10)

Figures show the estimated quantities of hen eggs produced for consumption in shell and for processing for human consumption in the United Kingdom, together with imported eggs.

## Chocolate and sugar confectionery (Table 6.11)

Disposals are consumption figures combined with exports. Figures are collected by the Biscuit, Cake, Chocolate and Confectionery Alliance (BCCCA). Medicated confectionery is excluded.

## Tea (Table 6.11)

Disposals are the quantities moving into consumption and exclude exports. Stocks comprise tea held in public and private warehouses and amounts held by primary wholesalers; these data are compiled by DEFRA from data supplied by the International Tea Committee (ITC).

## Raw coffee (Table 6.11)

Disposals are estimated as imports of raw coffee plus the decrease in stocks of raw coffee in public warehouses, in transit to such warehouses, in imports not landed and manufacturers' stocks. They include coffee re-exported from the United Kingdom. The data on stocks is from two DEFRA surveys of coffee stocks (relating to stocks held by manufacturers and those held in public warehouses).

## Tobacco products (Table 6.12)

The figures are supplied by HM Revenue and Customs. The statistics relate to numbers of cigarettes and weight of other tobacco products. Figures are derived from duty payment systems and therefore exclude personal importations. Data relate to releases at the time they become liable to excise duty. Products may then be stocked duty paid before consumption. Releases tend to be higher in the period immediately before the Budget and in the period before the tobacco manufacturers increase their prices.

## Alcoholic drinks (Table 6.13)

The figures are supplied by HM Revenue and Customs. Quantities are derived from duty and therefore exclude personal importations. From January 1993, as a result of the introduction of the European Single Market, data relating to imports from EC countries have had to be estimated from duty receipts and figures are therefore less reliable than previously.

## Definitions and explanatory notes

## Beer

Data are shown for the quantity of beer produced in the United Kingdom and for the quantity released for home consumption, which includes commercial imports. Since June 1993 duty has been charged as beer leaves the brewery or other registered premises. Previously duty was charged at an earlier stage (the worts stage) in the brewing process, and an allowance was made for wastage.

## Wine of fresh grapes

Wine is any fermented beverage made from fresh grapes, and includes fortified wines and vermouths. The figures show the net quantities of still table and fortified wine and sparkling wine released for home consumption.

## Made-wine

Made-wine is any fermented beverage other than cider and perry, wine of fresh grapes and beer. An example is 'British sherry', which is made from imported grape concentrate. Coolers with strength of 1.2 per cent -5.5 per cent alcohol by volume are shown separately. Coolers include alcoholic lemonade and similar products of appropriate strength. From 28 April 2002, duty on spirit-based 'coolers' is charged at the same rate as spirits per litre of alcohol. Made wine coolers include only wine based 'coolers' from this period.

## Cider and perry

This is cider and perry of strength less than 8.5 per cent of alcohol by volume obtained from the fermentation of apple or pear juice.

## Spirits

Home-produced whisky. These figures refer to spirits matured in warehouse for three years or more certified as Scotch or Northern Irish whisky released for home consumption.

Other. These figures relate to all other spirits released for home consumption, including imports. From 28 April 2002 Spiritbased RTD (Ready to Drink) products were dutied at the same rate as spirits per litre of alcohol. Details on clearances prior to 28 April are included in the made wine coolers products.

Production figures show the quantity of potable spirits distilled after maturation for consumption, separated into homeproduced whisky and other spirits. All figures for spirits are given in hectolitres of pure alcohol. A standard whisky is 40 per cent alcohol by volume.

## Further references

Monthly bulletins covering duty paid clearances and receipts for most excise goods, betting and gaming, environmental taxes, air passenger duty and VAT receipts are published and are available free from HM Revenue and Customs website at www.uktradeinfo.com

A more detailed analysis of the receipts and activities of the department are available in HM Revenue and Customs Annual Report, published by The Stationery Office. Details can also be found on HMRC website at www.hmrc.gov.uk

## 7. Production, output and costs

## Output of the production industries (Table 7.1)

This index is prepared by ONS with the help of statistical divisions of other government departments. From the publication of the quarterly national accounts data-set on 29 June 2006, the index has been published with the year 2003 as the reference year. The first monthly publication on this basis was in early July 2006, in respect of May 2006 data.

All series are available annually, quarterly and monthly from 1994 but most series are available for earlier years. Data are published on the National Statistics website, www.statistics. gov.uk

The index is intended to provide a general measure of monthly changes in the volume of output of the production industries, which comprise Sections C - Mining and quarrying, D Manufacturing and E-Electricity, gas and water supply of the SIC(2003).

The index is a weighted average of around 230 separate indicators, each of which describes the activity of a small sector of industry. Most of the information for manufacturing industry emanates from a comprehensive system of monthly production inquiries to industry undertaken by ONS. The estimates of turnover for each industry from these inquiries are adjusted by the changes in work in progress and finished goods to calculate the value of production in the industry.

Annual chain-linking is used to combine the individual production series. Each industry has been given a weight proportional to its value added in the previous year derived from the input-output tables. The latest set of weights available is for the year 2003.

The level of production is expressed as a percentage of the average monthly production in 2003. All current value data are deflated using the appropriate producer price indices and export deflators. The seasonal adjustment process ensures that
different months' output can be compared by adjusting for the number of working days in each month and for the normal seasonal pattern. The program X-II ARIMA is used to carry out seasonal adjustment of the loP. The adjustments are designed to eliminate normal month to month fluctuations and thus to show the trend more clearly.

## Industrial classification

The industrial analysis of the index at a published group level is consistent with the UK Standard Industrial Classification of Economic Activities - UK SIC(2003), to which reference should be made for a description of each industrial group.

## Market sector analysis

At the time of the introduction of the rebased, chain-linked loP series (end September 2003), the market sector categories were revised to be consistent with the Eurostat approved 'main industrial groupings'. 'Durable goods' was replaced by 'Consumer durables', 'Non-durable goods' by 'Consumer nondurables', 'Investment goods' by 'Capital goods' and 'Intermediate goods' by 'Intermediate goods and energy'. It is important to note that this change is not simply to do with descriptions but encompasses a reallocation of four-digit industries classified to the groupings. Data on the new basis are available from 1994.

## Output per filled job (Table 7.2)

UK output per filled job is the ratio of Gross Value Added (GVA) at basic prices and productivity jobs.

The methodology used to produce the productivity jobs indices has been developed with the aim of producing a jobs measure that is consistent with the output measure used in calculating output per job estimates. Productivity jobs are calculated based on enterprise level employee jobs and self-employed jobs, including both full-time and part-time workers as full units and differ from the Workforce Jobs series. The employees' part of productivity jobs is now constrained to the employees' part of Labour Force Survey (LFS) jobs at the whole economy level. Members of HM Forces and Government-supported trainees are also included in the indices.

Productivity data are available for the UK whole economy, production and manufacturing sections. Output per job data is published on a monthly basis for manufacturing, and on a quarterly basis for the whole economy, production and manufacturing sections.

Data are also published in the Productivity First Release, Labour Market Integrated First Release, Economic Trends and Labour Market Trends. Data are published as seasonally adjusted indices, where 2003 is the base year.

The full productivity data sets and related articles can be found on the National Statistics website at www.statistics.gov.uk/ productivity

## Productivity and unit labour costs (Table 7.3)

Manufacturing unit wage costs estimates are based on the seasonally adjusted monthly Average Earnings Index, manufacturing productivity jobs and the manufacturing index of production. Whole economy unit wage costs index estimates are based on GVA at basic prices, total wages and salaries, and productivity jobs. Manufacturing data are released on a monthly basis and whole economy data are quarterly.

Data are also published in the Productivity First Release, Labour Market Integrated First Release, Economic Trends and Labour Market Trends.

An index of unit labour costs is published on a quarterly basis for the whole economy. The index uses the same methodology as is applied to calculate unit wage costs, but employers' social contributions minus employment subsidies are added to the wages and salaries figure prior to calculation. Data are published as seasonally adjusted indices, where 2003 is the base year.

The full productivity data sets and related articles can be found on the National Statistics website at www.statistics.gov.uk/ productivity.

## 8. Energy

Inland energy consumption: primary fuel input basis (Table 8.1)

## Coal

Consumption by fuel producers plus disposals (including imports) to final users, plus solid renewable sources of energy, and net foreign trade and stock change in other solid fuels.

## Petroleum

Production plus net imports minus marine bunkers, plus stock change. Figures exclude petroleum used for non-energy purposes.

## Natural gas

Includes gas used during production (e.g. waste and own use for drilling, pumping and production operations) but excludes gas flared or re-injected. Includes colliery methane, but not landfill and sewage gases. Includes net imports and stock changes. Figures exclude gas used for non-energy purposes.

## Definitions and explanatory notes

## Primary electricity - nuclear

Electricity generated (net of electricity used on works) by nuclear power stations belonging to BNFL Magnox and British Energy.

## Primary electricity - hydro-electricity and wind

Electricity generated (net of electricity used on works) by natural flow hydro-electric power stations (i.e. excluding pumped storage stations) owned by major power producers and other generators and by wind turbines.

## Primary electricity - net imports

Electricity imported from, less electricity exported to, countries outside the United Kingdom.

## Conversion to oil equivalent

In expressing fuel consumption in tonnes of oil equivalent, each fuel is converted using its gross calorific value, on the basis of 1 tonne of oil equivalent being equal to 41.868 Gigajoules (GJ).

The estimated gross calorific values used to convert the statistics are published annually in the Digest of United Kingdom Energy Statistics.

The conversion factors used are:
1 tonne of oil equivalent $=10^{7}$ kilocalories

$$
\begin{aligned}
& =396.83 \text { therms } \\
& =41.868 \text { gigajoules (GJ) } \\
& =11630 \mathrm{kWh}
\end{aligned}
$$

Primary electricity is presented in oil equivalent as the energy content of the electricity produced (the energy supplied basis). For nuclear stations allowance is made for the thermal efficiency of nuclear stations.

## Temperature corrections

The adjusted total inland energy consumption series includes temperature corrections for coal, petroleum and natural gas. Nuclear and hydro-electricity and net imports of electricity are not corrected for temperature.

## The corrections used are

Temperature correction per degree Celsius above the long term temperature average for the month:

| Coal | 2.1 per cent |
| :--- | :--- |
| Petroleum | 0.7 per cent (June-Aug) |
|  | 1.8 per cent (Sept-May) |

Natural gas is corrected based on a methodology developed by BG Transco.

## Supply and use of fuels (Table 8.2)

## Production of primary fuel

Coal. Includes all grades of coal produced by all UK coal producers at mines and opencast sites. The main producers are UK Coal plc, Mining (Scotland) Ltd., Celtic Energy Ltd. and Goitre Tower Anthracite Ltd. Slurry is included in the production figures.

Petroleum, Crude oil, condensates (C5 or heavier) and petroleum gases, ethane (C2), propane (C3), and butane (C4), obtained from the onshore processing of associated and nonassociated gas.

Natural gas. Indigenous natural gas (methane) production includes own use for drilling, pumping and production operations but excludes gas flared, vented or re-injected.

Primary electricity. Nuclear and hydro-electricity and electricity from wind as described under Inland energy consumption but excluding any net imports of electricity.

## Non-energy use

Petroleum products and natural gas not used as fuels, i.e. feedstock for petroleum chemical plants, industrial and white spirits, lubricants, bitumen, waxes, petroleum cokes and miscellaneous products.

## Total primary energy

This assesses the energy content of the total input to the economy of primary fuels and equivalents. It includes energy used and lost in the conversion of primary fuels to secondary fuels (for example, in power stations and oil refineries), energy lost in the distribution of fuels (for example, in transmission lines) and energy conversion losses by final users.

The energy content of primary fuels consumed by secondary fuel producers consists of their energy inputs of coal, petroleum and natural gas plus the energy equivalent of the electricity produced by nuclear and hydro-electricity stations, as defined above under 'Oil equivalents'.

## Final consumption

This measures the energy content of inputs of fuels (primary or secondary as appropriate) to final users. Thus it is net of fuel industries' own use and conversion, transmission and distribution losses, but it includes losses in conversion by final consumers. Detailed definitions of the final consuming sectors are given in the annual Digest of United Kingdom Energy Statistics (The Stationery Office), prepared by the Department of Trade and Industry.

## Coal: supply (Table 8.3)

## Deep-mined coal

Production figures relate to saleable output from deep mines including coal obtained from working on both revenue and capital accounts. All licensed collieries are included, even where coal is only a subsidiary product.

## Opencast coal

The figures cover saleable output and include the output of sites worked by private operators under licences as well as the output of sites licensed for the production of coal as a subsidiary to the production of other minerals.

## Other

Estimates of slurry etc. recovered and disposed of from dumps, ponds, rivers, etc.

## Coal: imports and exports (Table 8.3)

The figures are derived from returns made by importers and exporters to HM Revenue and Customs, and are published in greater detail in Annex G of the Digest of UK Energy Statistics (The Stationery Office).

## Coal: inland consumption (Table 8.4)

## Statistical calendar

The statistical calendar determines which weeks are included in the 4 or 5 week statistical months. The privatised coal industry has adopted the 4-4-5 week statistical calendar formerly used by British Coal.

## Collieries

Coal used for boilers, colliery power stations and other purposes.

## Electricity generators

Coal used for all purposes at power stations belonging to major power producing companies (see Electricity supply industry below).

## Heat generation

Coal used to generate heat which is then sold under provision of a contract.

## Coke-ovens

Coal carbonised, consumed for other purposes or lost in cleaning at coke ovens.

## Other conversion industries

Consumption of coal at low temperature carbonisation plants and briquette works.

## Industry

Coal used for all purposes at other industrial establishments. Figures relate to colliery and opencast disposals, and estimated proportions of steam coal imports, and imports of anthracite.

## Domestic

House coal: figures relate to colliery and opencast disposals and include coal supplied free of charge or at reduced prices to miners, officials, etc. in the coal industry. They also include estimated proportions of steam coal imports.

Other: figures include colliery and opencast disposals of anthracite and dry steam coal to merchants plus disposals of imports of anthracite.

## Miscellaneous

Colliery and opencast disposals to commercial public administration and non-industrial establishments, including agriculture.

## Electricity generators

Following on from the restructuring of the electricity supply industry at the end of March 1990, the term 'Major power producers' was introduced to distinguish supply by the former nationalised industries from electricity supplied by autogenerators and new independent companies set up to generate electricity. The ONS Monthly Digest of Statistics classifies all companies whose prime purpose is the generation of electricity under the heading 'major power producers'.

## Natural gas production and supply (Table 8.5)

This table shows the flow of gas from the point of production to consumption in the UK. The data for the upstream gas industry represent the flow of gas from production at offshore and onshore fields plus imports and less exports of gas together with changes in pipeline stocks to give details of net gas available at UK gas terminals for consumption within the UK. The downstream gas industry section shows the onward transmission of this gas through the high-pressure National Transmission System and other dedicated direct supply lines between producers and major consumers towards final consumption. The data are gathered from different sources, and as such, differences arise in the recording of the volumes of gas moving at the various points of the flow. More detail on the causes and size of these differences can be found in the DTI publication, the Digest of United Kingdom Energy Statistics 2006, Chapter 4, paragraphs 4.44 to 4.47 .

## Definitions and explanatory notes

## Electricity supply industry (Table 8.6)

The ONS Monthly Digest of Statistics classifies all companies whose prime purpose is the generation of electricity under the heading 'major power producers' in the UK, namely: AES Electric Ltd., Baglan Generation Ltd., BNFL Magnox, British Energy plc., Centrica plc., Coolkeeragh Power Ltd., Corby Power Ltd., Coryton Energy Company Ltd., Derwent Cogeneration Ltd., Drax Power Ltd., EDF Energy plc., E.ON UK plc., Fellside Heat and Power Ltd., Fibrogen Ltd., Fibropower Ltd., Fibrothetford Ltd., Humber Power Ltd., Immingham CHP., International Power plc., Premier Power Ltd., Rocksavage Power Company Ltd., RWE Npower plc, Scottish Power plc., Scottish and Southern Energy plc., Seabank Power Ltd., SELCHP Ltd., Spalding Energy Company Ltd., Teesside Power Ltd, Western Power Generation Ltd. Since then E.ON has acquired Enfield Energy Centre.

## Fuel used

The factors used for conversion to oil equivalent are given under 'Oil equivalents', above.

## Own use

The difference between total electricity generated and electricity supplied, and the electricity used at the works for lighting and auxiliary power, and for pumping at pumped storage stations.

## Total electricity available

Electricity supplied from major power producers plus purchases from other UK producers plus net imports from overseas.

## Sales of gas and electricity: public supply (Table 8.7)

Gas sales include adjustment to the quantities billed to allow for the estimated consumption remaining unread at the end of each period.

Sales of electricity are less than total electricity available because of losses in transmission and distribution, etc., and include consumption by the supply industry's offices and retail outlets. They allow for electricity consumed but not billed in the period.

## Petroleum (Tables 8.8-8.9)

## Total indigenous production

This is the aggregate amount of:

- crude oil produced both onshore and offshore from the UK part of the Continental Shelf including any petroleum gases and condensates separated from the oil at subsequent processing stages (prior to refining). This quantity is as
recorded before any deduction for utilities use or adjustment for stock change on platform (including tanker-loading systems) or losses
- condensates from gas fields (production is measured at the land terminal separation plant after the gas has been processed and condensates extracted).

## Imports and exports

The information given under the headings 'imports' and 'exports' are the volumes recorded by importers and exporters of oil. These amounts may differ from the import and export figures recorded by HM Revenue and Customs. These differences can arise because of timing differences between actual and declared movements. The HMRC figures also include re-exports. Re-exports are products that have been imported from another country and stored in the UK prior to being exported out of the UK. Thus these exports would not have been produced in the UK

## Inland deliveries into consumption

Deliveries of all petroleum products in the United Kingdom and the Channel Islands including petroleum substitutes marketed by the petroleum industry. Coal tar fuels, natural gas (methane) and refinery fuel are excluded. Otherwise, the figures are inclusive of the petroleum industry's own use.

Gas/diesel and fuel oils used in coastal and fishing craft are included in inland deliveries, but deliveries under contracts for ships engaged in foreign trade are excluded.

## Products used as fuel

Propane - hydrocarbon containing three carbon atoms, $\left(\mathrm{C}_{3} \mathrm{H}_{8}\right)$ gaseous at normal temperature but generally stored and transported under pressure as a liquid. Used mainly for industrial purposes but also as transport LPG and some domestic heating and cooking.

Butane - hydrocarbon containing four carbon atoms, $\left(\mathrm{C}_{4} \mathrm{H}_{10}\right)$ otherwise as for propane. Additional uses - as a constituent of motor spirit to improve volatility and as a chemical feedstock.

Naphtha (light distillate feedstock) - petroleum distillate boiling predominantly below $200^{\circ} \mathrm{C}$.

Aviation spirit - all light by hydrocarbons intended for use in aviation piston-engined power units, including bench testing of aircraft engines.

Motor spirit - blended light petroleum distillates used as a fuel for spark-ignition internal combustion engines other than aircraft engines.

Aviation turbine fuel - specially refined kerosene intended for use in aviation gas-turbine power units.

Burning oil (kerosene or paraffin) - refined petroleum distillate intermediate in volatility between motor spirit and gas oil, used for lighting and heating. Excluding distillates which are included under white spirit and kerosene used for lubricant blends.

Gas/diesel oil - petroleum distillate having a distillation range intermediate between kerosene and light lubricating oil.

- Derv (Diesel Engine Road Vehicle) fuel - gas/diesel oil for use in high-speed, compression-ignition engines in road vehicles subject to Vehicle Excise Duty;
- Other - used in furnaces for the production of heat (e.g. for central heating) in engines of vehicles not subject to Vehicle Excise Duty (e.g. diesel locomotives, tractors, earth-moving equipment) and in stationary diesel engines and gas turbines (e.g. for the generation of electricity and for air compressors, etc.). Also includes marine diesel oil - a heavier type of gas oil suitable for heavy industrial and marine compression-ignition engines.

Fuel oil - heavy petroleum distillates or petroleum residues or blends of these used in furnaces for the production of heat or power. Excluding fuel oil for grease making or lubricating oil and fuel oil sold as such for road-making.

## Products not used as fuel

Feedstock for petroleum chemical plants - all petroleum products intended for use in the manufacture of petroleum chemicals. (A deduction has been made from the deliveries equal to the quantity of feedstock used in making the conventional petroleum products which are produced during the processing of the feedstock).

White spirit - a highly refined distillate with a boiling range of about $150^{\circ} \mathrm{C}$ to $200^{\circ} \mathrm{C}$ used as a paint solvent and for dry cleaning purposes, etc.

Industrial spirits - refined petroleum fractions with boiling ranges up to $200^{\circ} \mathrm{C}$ dependent on the use to which they are put, e.g. seed extraction, rubber solvents, perfume, etc.

Lubricating oils (and greases) - refined heavy distillates obtained from the distillation of petroleum residues. Includes liquid and solid hydrocarbons sold by the lubricating oil trade, either alone or blended with fixed oils, metallic soaps and other organic and/or inorganic bodies.

Bitumen - the residue left after the production of lubricating oil distillates. Used mainly for road-making and building construction purposes. Includes other petroleum products, creosote and tar mixed with bitumen for these purposes and fuel oil sold as such for road-making.

Petroleum waxes - includes paraffin wax, which is a white crystalline hydrocarbon material of low oil content normally obtained during the refining of lubricating oil distillate, paraffin scale, slack wax, microcrystalline wax and wax emulsions. Used for cable manufacture, polishes, food containers, wrappings, etc.

Petroleum cokes - carbonaceous material derived from hydrocarbon oils, uses for which include electrode manufacture. An unknown quantity of this product may be used as a fuel.

Miscellaneous products - includes aromatic extracts, defoament solvents and other minor miscellaneous products.

## 9. Chemicals

## Fertilisers (Table 9.1)

## Deliveries to UK agriculture

Fertiliser statistics are supplied by the Agricultural Industries Confederation and represent the deliveries made by their members only.

Natural organic manures are excluded from the statistics. Figures are of manufactured fertilisers. Manufactured fertilisers may be straight (i.e. containing only one of the three original primary nutrients - N , nitrogen; $\mathrm{P}_{2} \mathrm{O}_{5^{\prime}}$ phosphate; and $\mathrm{K}_{2} \mathrm{O}$, potash) or compound (i.e. containing either two or three of these primary nutrients).

The quality of sulphur deposited on land from the atmosphere has now been reduced to such an extent that the addition of sulphur as a fertiliser has become commonplace. Since 2001/02 the fertiliser statistics have included data on sulphur deliveries, both with straight N and in compounds but without altering the original definitions (above) of these two categories (i.e. N plus sulphur is included with straight N rather than being considered as a compound). Sulphur is a major nutrient for all crops and grass and is declared as $\mathrm{SO}_{3}$.

All figures include imported fertilisers utilised by AIC members. Up to and including June 1996 nitrogen deliveries are expressed in nutrient content terms, divided into straight nitrogen fertilisers and the nitrogen content of compounds. Phosphate and potash delivery figures show the nutrient content of these primary nutrients in compounds. The total weight of compound fertilisers delivered to UK Agriculture is stated separately. From July 1996 the deliveries are expressed in terms of the total weights of straight nitrogen fertilisers and the total weight of compound fertilisers on a monthly basis. Nutrient breakdowns in terms of nitrogen, phosphate, potash and sulphur are shown six monthly.

## Definitions and explanatory notes

## Sulphur and sulphuric acid (Table 9.2)

## Sulphur, etc.

The figures relate to elemental sulphur (include oil and gas recovered) and zinc concentrates for use in the manufacture of sulphuric acid.

Stocks of sulphur and zinc concentrates are quantities at acid works.

## Sulphuric acid (as 100 per cent acid)

Consumption figures include recovered sulphuric acid.

## UK manufacturers' sales by industry

(Tables 9.3-9.5)

## Basic Chemicals etc. (Table 9.3) <br> Pharmaceutical products etc. (Table 9.4) <br> Other chemical products (Table 9.5)

The data in these tables are collected under the PRODCOM inquiry, which was introduced in 1993 and replaced the previous QSI/ASI inquiries. Data shown are monetary sales in $£$ thousand of products classified to the SIC 2003 industries that are surveyed quarterly by the PRODCOM inquiry. (Data for industries surveyed annually can be found in Table 22.2 of the Annual Abstract of Statistics). Detailed product sales data (values and quantities) together with exports and imports data are available in the Product Sales and Trade quarterly and annual reports (PRQ and PRA series). The quarterly series was terminated in 2005 and so quarterly backdated data is only available for periods up to the end of 2004. The annual series now incorporates the industries once covered by the quarterly series. For further information visit the National Statistics website www.statistics.gov.uk/Statbase/Product. asp?vlnk=9660.

## 10. Metals, engineering and vehicles

## Iron and steel (Table 10.1)

The general definition of the iron and steel industry is based on groups 221 'CSC Iron and Steel', 222 'Steel Tubes' and 223 'Steel Drawing, Cold Rolling and Cold Forming' of the UK Standard Industrial Classification (1980), except those parts of group 223 which cover the manufacture of drawn wire, wire products and cold formed sections.

The definition therefore covers blast furnaces and associated preparation plant, steel melting shops, ingot casting and continuous casting plant, hot rolling mills and cold wide strip or plate mills together with associated coating plants and tinplate
mills. Also included are tube and pipe mills, cold narrow strip mills and bar drawing or cold finishing plants.

The definition also includes liquid steel for castings but excludes finished steel castings. Also excluded from the definition are refined iron, steel tyres, wheels, axles and rolled rings, open and closed die forgings, colliery arches, cold formed sections and finished wire. The definition also excludes the activities of iron foundries.

## Crude steel (Table 10.2)

The total of usable ingots, usable continuously cast semifinished products and liquid steel for castings. This definition is identical to that of the ECSC and generally measures production of crude steel at the first stage of solidification, except that steel for castings is measured at the liquid stage since solidified castings do not fall within the scope of the ECSC Treaty of Paris.

## Alloy steel (Table 10.2)

Steel containing by weight at least 0.5 per cent of silicon, or 1.6 per cent of manganese, or 0.3 per cent of chromium or nickel, or 0.0008 per cent of boron, or 0.1 per cent of any other element except carbon, lead, nitrogen, phosphorus or sulphur. Alloy steels include stainless steel and heat resisting steels which contain 10.5 per cent or more of chromium, with or without other alloy elements, and less than 1.2 per cent of carbon.

## Total Engineering (Table 10.4)

The table shows non-seasonally adjusted current price total turnover data of the industries classified to Divisions 29, 30, 31, 32 and 33 of the Standard Industrial Classification 2003.

The data are based upon the results of monthly surveys (estimates are made for non-response) and are also published on the National Statistics website.

## Mechanical, instrument and electrical engineering (Tables 10.5-10.7)

These tables provide seasonally adjusted constant price index numbers of total, home and export sales, orders-on-hand and new orders (net of cancellations) of the industries classified to Divisions 29, 30, 31, 32 and 33 of the Standard Industrial Classification 2003. In addition non-seasonally adjusted current price data is also shown in Table 10.4. The basic data for the index numbers of home sales and orders-on-hand are obtained by subtracting exports from totals and data for new orders are derived from current sales and the change in orders-on-hand. Seasonally adjusted total indices are obtained by combining the seasonally adjusted home and export series.

The index numbers and non-seasonally adjusted data for the total engineering industries are initially published, together with a commentary, monthly on the National Statistics website. The data are based upon the results of monthly inquiries, estimates being made for non-respondents. From December 2006 (reference period October 2006) constant price seasonally adjusted data will no longer be available.

## Motor vehicles (Tables 10.8-10.9)

The figures represent the output of United Kingdom based manufacturers classified to Class 34.10 (motor vehicles) of the Standard Industrial Classification (2003). They are derived from the motor vehicle production inquiry (MVPI).

Due to a change in the pattern of production caused by the introduction of a twice-yearly age identifier, the seasonally adjusted series, based on the seasonal patterns of production from January 1999, has now been re-introduced. This affects the series from January 1999 only. Earlier data is based on previous production patterns

## Passenger cars (Table 10.8)

These figures include vehicles produced in the form of kits for assembly. The value of the kit must be 50 per cent or more of the value of corresponding complete vehicles.

## Commercial vehicles (Table 10.9)

The following types of vehicles are included: lorries and vans, motive units for articulated vehicles and special-type vehicles other than tracked armoured fighting vehicles for the Services. Chassis delivered as such by motor manufacturers are included.

## 11. Textiles and other manufactures

Indices of production in the textile and clothing industries (Table 11.1)

These indices provide a general measure of the changes in the volume of production in the textile and clothing industries. For further information regarding the compilation of these indices, see Section 7.

## UK manufacturers' sales by industry

(Tables 11.2-11.5)

## Household textiles etc. (Table 11.2)

Knitted and crocheted products etc. (Table 11.3)
Wearing apparel etc. (Table 11.4)
Miscellaneous products (Table 11.5)
The data in these tables are collected under the PRODCOM inquiry, which was introduced in 1993 and replaced the
previous QSI/ASI inquiries. Data shown are monetary sales in £ thousand of products classified to the SIC2003 industries that are surveyed quarterly by the PRODCOM inquiry. (Data for industries surveyed annually can be found in Table 22.2 of the Annual Abstract of Statistics). Detailed product sales data (values and quantities) together with exports and imports data are available in the Product Sales and Trade quarterly and annual reports (PRQ and PRA series). The quarterly series was terminated in 2005 so quarterly backdated data is only available for periods up to the end of 2004. The annual series now incorates the industries once covered by the quarterly series. Further information can be found on the National Statistics website www.statistics.gov.uk/Statbase/product. asp?vInk=9660.

## 12. Construction

Value and volume of construction work and new orders obtained (Tables 12.1-12.2)

Figures for the construction industry are based on the 2003 Standard Industrial Classification.

The value of output represents the value of construction work done during the quarter in Great Britain and is derived from returns made by private contractors and public authorities with their own direct labour forces. The series (and the accompanying index of the volume of output) include estimates of the output of small firms and self-employed workers not recorded in the regular quarterly output inquiry.

The new orders statistics are collected from private contractors and analysed by the principal types of construction work involved. The series includes speculative work for eventual sale or lease undertaken on the initiative of the respondent where no formal contract or order is involved.

## Building materials and components (Table 12.3)

Unless otherwise stated, the figures are from returns submitted by producers.

## Building bricks

The figures identify common, facing and engineering bricks made from clay, concrete or sandlime, but exclude both glazed bricks and all types of refractory bricks.

## Concrete building blocks

Information refers to both dense and lightweight aggregate and to aerated concrete blocks.

## Definitions and explanatory notes

## Concrete roofing tiles

Figures refer to the area of roof covered.

## Ready-mixed concrete

Figures are for production in the United Kingdom and are provided by the Quarry Products Association. They include deliveries by members with an estimate for non-members.

## Slate

The figures cover slate mined or quarried for all purposes including roofing and damp-proof courses, architectural and cladding uses.

## Sand and gravel

The figures include both land-won and marine-dredged sales and identify building sand, concreting sand, gravel and hoggin.

## Housing (Table 12.4)

The table on housebuilding relates to permanent dwellings built by private enterprise, registered social landlords (formerly Housing Associations) and local authorities. Temporary houses and mobile homes are excluded.

Figures for private enterprise and registered social landlords (excluding Scottish Homes) are each shown separately. Figures for the public sector include houses provided by local authorities, Scottish Homes (formerly the Scottish Special Housing Association) and the Northern Ireland Housing Executive.

Dwellings are defined as started when the foundations are laid (or slabbing, if applicable).

Dwellings are defined as completed when they become ready for occupation.

## 13. Transport

## Road vehicles in Great Britain (Tables 13.1-13.2)

In general the classes of vehicles are based on the taxation classes set out in schedules to the Vehicle (Excise) Act 1971, although in certain cases they have been renamed. However, extensive reforms of vehicle taxation classes were introduced from 1 July 1995, involving the abolition of a number of little used tax classes, the creation of certain new classes and revisions to some existing classes.

## Private and light goods

Includes all vehicles used privately, mostly consists of private cars and vans. From 1 October 1990 most goods vehicles less than $3,500 \mathrm{kgs}$ gross weight were transferred into this group.

Further vehicles previously taxed in other groups but not exceeding 3,500 kgs were transferred into this group from 1 July 1995, for example recovery tax class vehicles not over $3,500 \mathrm{kgs}$. Other examples are described below.

## Goods vehicles

Mostly goods vehicles greater than 3,500 kgs gross vehicle weight but up to 1 July 1995 also included farmers' and showmen's goods vehicles some of which were less than 3,500 kgs . Separate goods categories for the use of showmen and farmers were abolished from 1 July 1995 and vehicles over 3,500 kgs revenue weight were absorbed into general goods tax classes one and two. Goods vehicles not exceeding 3,500 kgs were transferred into the private and light goods group. A special taxation class solely for the use of goods vehicles based and used on certain offshore islands was established.

## Public transport vehicles

Vehicles used to convey members of the public were taxed as hackney vehicles up to 1 July 1995, including buses, coaches, taxis and private hire cars. The previous Hackney taxation class was abolished from 1 July 1995 and replaced by a new Bus class, for the taxation of vehicles used to convey members of the public for hire or reward. These are usually vehicles with nine or more seats. Buses and coaches not licensed for public use are taxed as private vehicles. Vehicles previously in the Hackney class but with eight seats or fewer were transferred to the private and light goods group.

## Special concession group

Until 1 July 1995 agricultural machines and other agricultural machinery were taxed at a special rate. This class also included works trucks, mobile cranes and mowing machines, vehicles making little use of public roads. This group was abolished from 1 July 1995, and replaced by a group termed 'special concessionary'. This continues to include agricultural machines, but was extended to include snowploughs, gritting vehicles, and electric vehicles among others. However, some heavy vehicles previously in the agricultural and special machines group were transferred to the 'special vehicles' group described above.

## Special vehicles

A group established from 1 July 1995 and used primarily for the taxation of heavy vehicles, but where taxation as a standard goods vehicle would not be appropriate. Examples include showmen's haulage vehicles, mobile cranes, digging machines, road rollers, etc.

## Exempt vehicles

Exempt vehicles pay no excise duty. Exempt vehicles are divided into two further groups, those which are registered but carry no licence, and those which renew their licence annually but pay a nil rate of duty. Vehicles owned by government departments and operating under certificates of crown ownership pay no tax under the Vehicle (Excise) Act and are termed 'Crown' vehicles, falling into the first of these categories.

Among vehicles exempt from tax, a group covering emergency vehicles was created from 1 July 1995. This group includes ambulances, fire engines, other fire service vehicles, life boat haulage, mine rescue and police vehicles. Some changes were made to the list of exempt vehicle types. For example, electric vehicles, previously exempt, were moved to the special concessionary group.

A new tax class was introduced from 29 November 1995 for vehicles previously in private or light goods or motorcycle classes and over 25 years of age which are now exempt from duty.

## Sources

Statistics are based on licensing records held at the Driver and Vehicle Licensing Agency (DVLA) at Swansea. Before 1978, however, statistics of vehicles currently licensed were based on a combination of those records which were held at DVLA and those which were held at local taxation offices. Pre-1978 figures have been adjusted to be comparable with later figures based wholly on DVLA records.

## Road traffic and goods transport in Great Britain (Table 13.3)

The index of tonne-kilometres of road goods transport is estimated from the Continuing Survey of Road Goods Transport. Quarterly index numbers for road transport are obtained by dividing each quarter's figure of tonne-kilometres performed by road by the quarterly average in 1977. The quarterly figures relate to 13 -week periods and not to three calendar months, so no adjustment for differences in the length of calendar months is necessary. Annual index numbers are obtained in a similar way by dividing the estimated annual road tonne-kilometres by the corresponding figure in 1977.

The index of vehicle kilometres travelled on roads in Great Britain is estimated from roadside traffic counts which take two forms: occasional short counts at large numbers of sites to estimate the absolute level of traffic (the DFT manual counts)
and continuous automatic counts at a small number of sites (the DFT automatic counts) to estimate changes in the amount of traffic. These counts are used to derive average vehicle flow and the vehicle kilometre estimates are the product of this average flow and the total lengths of roads.

## Road casualties in Great Britain (Table 13.4)

These figures are compiled from information received by the Department for Transport, the Scottish Executive and the National Assembly for Wales from police forces throughout Great Britain. Only those casualties in road accidents occurring on the public highway (including footways), in which a road vehicle was involved, and which became known to the police within 30 days of the accident are included.

Casualties are classified according to the degree of injury sustained. The degrees of injury are defined as follows:

Killed: a person who sustained injuries which caused death less than 30 days after the accident.

Seriously injured: a person detained in hospital as an 'inpatient', or any of the following injuries whether or not they are detained in hospital: fractures, concussion, internal injuries, crushings, severe cuts and lacerations, severe general shock requiring medical treatment, and injuries causing death 30 or more days after the accident.

Slightly injured: a person sustaining an injury of a minor character such as a sprain, bruise, or cut which are not judged to be severe, and do not necessarily require medical attention; or slight shock, requiring roadside attention.

## Road passenger transport (Tables 13.5-13.6)

The figures are derived from the annual returns of bus and coach operators. A passenger journey is defined as each single boarding of a vehicle.

## Indices of local (stage) bus fares

The information used to calculate the index of local (stage) bus fares is collected from a panel of the larger PSV operators accounting for over 85 per cent of passenger receipts from local services in Great Britain.

## Passenger journeys (Table 13.7)

On London Underground all journey figures are for complete journeys, which may include more than one stage. Return tickets are counted as two journeys. Season ticket journeys are those estimated to have been made in each year irrespective of when the ticket was sold.

## Definitions and explanatory notes

## Passenger traffic (Table 13.7)

## National Rail

The figures include all franchised Train Operating Companies (TOCs) that have been franchised to the private sector.

Passenger kilometres for season tickets are estimated on a rate of 480 journeys per year for annual season tickets and 540 journeys per year for season tickets of a duration of less than a year.

## Freight traffic (Table 13.8)

## Rail

The figures include all revenue-earning traffic carried on freight trains in Great Britain. They include traffic carried by English, Welsh and Scottish Railways (EWS), Freightliner, Direct Rail Services (DRS), and GB Railfreight.

Freight moved is measured in net tonne kilometres. This takes into account the net weight (excluding the weight of the locomotive and wagons) of the goods carried and the distance carried.

Freight lifted (measured in million tonnes) is the mass of goods carried on the network. It excludes the weight of the locomotives and wagons. Unlike freight moved it takes no account of the distance travelled.

## Civil aviation (Table 13.9)

The statistics cover the scheduled services of major UK airlines.
Scheduled services are services performed for remuneration according to a published timetable and which are open to use by members of the public. Extra revenue flights occasioned by overflow traffic from scheduled flights are also included.

The figures refer only to revenue kilometres and traffic and therefore exclude such items as training, positioning and test flights and non-revenue passengers and cargo.

In combining kilometre statistics, distances have been calculated on the great circle distance between two traffic stops. If a technical stop intervenes the distance is the sum of the two stages caused by the technical stop.

## International services

Services flown between the United Kingdom, Isle of Man, Channel Islands and points overseas, and services flown between points outside the United Kingdom, Isle of Man and Channel Islands.

## Aircraft kilometres

Figures are calculated by multiplying the number of flights performed by the stage distance.

## Passengers uplifted

A passenger for whose transportation an air carrier receives commercial remuneration. The figures are calculated by counting each revenue passenger on a particular flight (with one flight number) once only and not repeatedly on each individual stage of that flight. Exclusions:

- persons travelling free
- persons travelling at a fare or discount available only to employees of air carriers or their agents or only for travel on business for the carriers
- infants who do not occupy a seat.

## Seat kilometres used

The figures are calculated by multiplying the number of revenue passengers carried on each stage flight by the stage distance.

## Cargo

The weight of property carried on an aircraft including, for example, the weight of freight, mail, excess baggage and diplomatic bags, but excluding passengers' and crews' permitted baggage.

## Freight (or mail) tonne kilometres used.

The figures are calculated by multiplying the number of tonnes of freight and diplomatic bags carried on each stage flight by the stage distance. Mail tonne kilometres are calculated in a similar way.

## Passenger tonne kilometres used

These are calculated by multiplying the weight of passengers carried on each stage flight by the stage distance.

## Shipping (Table 13.10)

## Merchant vessels registered in the United Kingdom

Trading vessels of 500 gross tons and over registered within the United Kingdom, the Channel Islands and the Isle of Man.

## Bulk tanker and dry

The following ship types are included:
Oil tankers, liquefied gas carriers, liquid chemicals and other specialised tankers; and dry bulk carriers including combined carriers (ore-oil and ore-bulk-oil carriers).

## Other

The following ship types are included:
General cargo roll-on/roll-off and lift-on/lift-off vessels, fully cellular container and part containerised ships, other specialised dry cargo vessels, cruise liners and other passenger carrying vessels.

## Non-trading vessels

The following vessel types are excluded:
Sailing ships, offshore supply and support vessels, special service, tugs, fishing, research, dredgers/hoppers/barges, and naval auxiliary vessels.

## Gross tonnage

Gross tonnage is the total volume of all the enclosed spaces of a vessel. The unit of measurement is a ton of 100 cubic feet.

## Dead-weight tonnage

Dead-weight tonnage is the total maximum weight in tonnes that a ship can legally carry, that is, the total weight of cargo, bunkers, stores and crew.

## 14. Retailing

## Retail sales (Tables 14.1-14.2)

The monthly retail sales estimates cover the retail trades (excluding the motor trades and sale of automotive fuel) in Great Britain.

The inquiry provides soundly based estimates as it covers all large retailers and a random sample of smaller retailers. The sample size is approximately 5,000 . The use of statutory powers means that it has been possible to improve the sample design at the detailed level and reduce the sampling error associated with the results.

For each four or five week period, contributors report their retail sales for all their outlets internet site and mail order by catalogue. The statistics include VAT. Hire purchase and other instalment credit sales are valued at the credit price of the goods; that is including deposits and, where credit is provided by the shop, credit charges. Figures of credit sales relate only to the period during which the transactions took place; cash received from credit sales in previous periods is not included. Sales by chemists exclude receipts under the National Health Service. The sale of mobile phones and their accessories are included but contracts and airtime vouchers are excluded.

The retail sales index is based on the results of the 2000 annual business inquiry. From October 2003, the monthly retail index was rebased using detailed information from the larger scale 2000 annual business inquiry.

The main features of the series are:

- The reference year has been set at $2000=100$.
- It incorporates price deflators for each SIC class based on the pattern of trade shown by the 2000 annual business inquiry. These deflators are used to convert the value estimates on to a constant price or volume basis: most components of the retail sales index are deflated onto a volume basis using price data from the retail prices index.
- The index is now calculated using ratios estimation.
- The seasonal adjustment factors reappraised annually to ensure they reflect the seasonal pattern.

The latest summary statistics are published each month by First Release; more disaggregate value indices (not seasonally adjusted) are published each month in the ONS Business Monitor SDM 28: Retail Sales via the National Statistics website www.statistics.gov.uk/rsi. Retail Sales information may also be obtained by contacting Karen Woodsford, ONS, Room 1.464, Government Buildings, Cardiff Road, Newport, NP10 8XG. Tel: 01633812713 . Alternatively e-mail retail.sales.enquiries@ ons.gsi.gov.uk

## 15. External trade in goods

Statistics of the United Kingdom's overseas trade in goods are compiled by the Office for National Statistics from information provided to the Statistics and Analysis of Trade Unit (SATU) of HM Revenue and Customs by importers and exporters. A detailed description of the bases on which the statistics are compiled and the methodologies used is contained in a paper entitled 'Statistics on Trade in Goods'. This paper, which is Number 10 in the GSS Methodological Series, is available on the National Statistics website at http://www.statistics.gov.uk/ Statbase/Product.asp?vInk=3134.

## Balance of Payments (BoP) Data (Tables 15.1-15.9)

The information included in Tables 15.1 to 15.9 inclusive is on a BoP basis with exports and imports both valued 'fob' (free on board), i.e. excluding insurance premiums and freight. For a complete description of the procedures undertaken to convert data from an OTS basis to a BoP basis, see 'Statistics on Trade in Goods' referred to above.

## Definitions and explanatory notes

## Commodity classification (Tables 15.3-15.7)

Statistics of trade in goods are classified by commodity according to the Standard International Trade Classification (SITC Rev3), apart from defence equipment which is included in Section 9 rather than Section 8. Useful references are SITC revision 3, published in 1986 by the United Nations, and the HMRC's annual Guide to the Classification for Overseas Trade Statistics published by HM Revenue and Customs.

## Price and volume indices (Tables 15.4-15.5)

The indicators of price movement 'deflators' for individual commodities used in the calculation of price and volume indices are based in part on separately collected export and import price indices. Use is also made of adjusted producer price indices for exports and imports of manufactures. For other commodities where export and import price indices do not exist the price indices are based on the value and quantity data reported to Customs. For data prior to 1995 the calculation of price and volume indices is still based mainly on Customs data. A more detailed description of the deflation system can be found in 'Statistics on Trade in Goods' - see above.

Definition of areas (Tables 15.8-15.9)
As at 2004 the areas shown in Tables 15.8 and 15.9 comprised the following countries:

- Western Europe excluding the EU - Norway, Iceland, Switzerland, Andorra, San Marino, Vatican City, Turkey, Faroe Islands, Gibraltar, Liechtenstein;
- North America - United States of America, Canada, Greenland, Mexico, St. Pierre \& Miquelon, Puerto Rico;
- Other OECD countries - Japan, Australia, New Zealand, Ceuta and Melilla, South Korea;
- Oil exporting countries - Abu Dhabi, Algeria, Bahrain, Brunei, Dubai, East Timor, Ecuador, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Oman, Qatar, Saudi Arabia, Sharjah etc, Trinidad \& Tobago, Venezuela.

Figures excluding oil and the more erratic items (Tables 15.1-15.2)

Tables 15.1 and 15.2 show figures for trade excluding oil and the more erratic items. Oil means SITC Division 33 (petroleum and petroleum products). Experience suggests that trade in ships, aircraft, precious stones and silver can be regarded as erratic. Precious stones are classified to SITC Division 66 (nonmetallic mineral manufactures), silver to Division 68 (nonferrous metals) and the other erratic items to Division 79 (other transport equipment).

## Further Information (Tables 15.1-15.9)

More detailed figures on a BoP basis are shown in the Monthly Review of External Trade Statistics, as Business Monitor MM24. Editions of MM24 are available in electronic format and made as Adobe downloadable portable document formats (PDFs) on the National Statistics website: www.statistics.gov.uk/bop. The PDF files are available free of charge. OTS figures, not seasonally adjusted, appear in Overseas Trade Statistics of the United Kingdom, published monthly by The Stationery Office as OTS1, which also contains further information about definition and coverage of data. From January 1993 this publication relates only to non-EU trade. There are two publications showing EU trade. The first OTS2 being a monthly summary showing data by country and by broad commodity group (SITC division), and the second OTSQ providing quarterly detailed commodity level tables. Once published the figures are still subject to revision as late returns are processed and revisions are reflected in year-to-date figures. The annual publication OTSA combines the intra-EU and non-EU data.

Unadjusted OTS figures are also available from marketing agents appointed by HM Revenue and Customs, or on HMRC's website at http://www.uktradeinfo.com

## Import penetration and export sales ratios (Table 15.10)

The ratios were first introduced in the August 1977 edition of Economic Trends in an article 'The Home and Export Performance of United Kingdom Industries'. The article described the conceptual and methodological problems involved in measuring such variables as import penetration.

The industries are grouped according to the 2003 Standard Industrial Classification. The four different ratios are defined as follows:

Ratio 1: percentage ratio of imports to home demand
Ratio 2: percentage ratio of imports to home demand
Ratio 3: percentage ratio of exports to total manufacturers' sales
Ratio 4: percentage ratio of exports to total manufacturers' sales plus imports

Home demand is defined as total manufacturers' sales plus imports minus exports. This is only an approximate estimate as different sources are used for the total manufacturers' sales and the import and export data. Total manufacturers' sales are determined by the PRODCOM inquiry and import and export data are provided by HM Revenue and Customs.

Ratio 1 is commonly used to describe the import penetration of the home market. Allowance is made for the extent of a domestic industry's involvement in export markets by using Ratio 2; this reduces as exports increase.

Similarly Ratio 3 is the measure normally used to relate exports to total sales by UK producers and Ratio 4 makes an allowance for the extent that imports of the same product are coming into the UK.

## 16. UK balance of payments

## Balance of payments (Tables 16.1-16.3)

The items in these tables are more fully described in United Kingdom Balance of Payments 2005 edition - the ONS Pink Book.

## Summary of Balance of payments (Table 16.1)

The Balance of payments consists of the current account, the capital account and the financial account. The current account consists of trade in goods and services, income and current transfers. Income consists of investment income and compensation of employees. The capital account mainly consists of capital transfers and the financial account covers financial transactions. Every credit entry in the balance of payments accounts should, in theory, be matched by corresponding debit entry so that total current capital and financial account credits should be equal to, and therefore offset by, total debits. In practice there is a discrepancy termed net errors and omissions.

## The current account (Table 16.2)

## Trade in goods

The goods account covers exports and imports of goods. Imports of motor cars from Japan, for example, are recorded as debits in the trade in goods account whereas exports of vehicles manufactured in the UK are recorded as credits. Trade in goods forms a component of the expenditure measure of Gross Domestic Product (GDP).

## Trade in services

The services account covers exports and imports of services (e. g. civil aviation). Passenger tickets for travel on UK aircraft sold abroad, for example, are recorded as credits in the services account whereas the purchases of airline tickets from foreign airlines by UK passengers are recorded as debits. Trade in services, along with trade in goods, forms a component of the expenditure measure of Gross Domestic Product (GDP).

## Income

The income account consists of compensation of employees and investment income and is dominated by the latter. Compensation of employees covers employment income from cross-border and seasonal workers which is less significant in the UK than in other countries. Investment income covers earnings (e.g. profits, dividends and interest payments and receipts) arising from foreign investment and financial assets and liabilities. For example, earnings on foreign bonds and shares held by financial institutions based in the UK are recorded as credits in the investment income account, whereas earnings on UK company securities held abroad are recorded as investment income debits. Investment income forms a component of Gross National Income (GNI) but not Gross Domestic Product (GDP).

## Current transfers

Current transfers are composed of central government transfers (e.g. taxes and payments to and receipts from the European Union) and other transfers (e.g. gifts in cash or kind received by private individuals from abroad or receipts from the EU where the UK government acts as an agent for the ultimate beneficiary of the transfer). Current transfers do not form a component either of Gross Domestic Product (GDP) or of Gross National Income (GNI). For example payments to the UK farming industry under the EU Agricultural Guarantee Fund are recorded as credits in the current transfers account while payments of EU agricultural levies by the UK farming industry are recorded as debits in the current transfers account.

## Financial account (Table 16.3)

While investment income covers earnings arising from foreign investments and financial assets and liabilities, the financial account of the balance of payments covers the flows of such investments. While earnings on foreign bonds and shares held by financial institutions based in the UK are, for example, recorded as credits in the investment income account, the acquisition of such foreign securities by UK based financial institutions are recorded as net debits in the financial account as portfolio investment abroad. Similarly the acquisitions of UK company securities held by foreign residents are recorded in the financial account as net credits as portfolio investment in the UK.

## 17. Government finance

## Public sector finances (Table 17.1)

Table 17.1 shows information on all the key public sector finance statistics. The government 's key fiscal indicators have

## Definitions and explanatory notes

been given far greater prominence, reflecting more closely the structure of the public sector finances and public sector accounts first releases. The statistics are used to monitor progress against the government's key fiscal rules, the 'golden rule' and the sustainable investment rule.

## Central government transactions and fiscal balances (Table 17.2)

Table 17.2 shows details of the income and expenditure determinants of central government net borrowing and the surplus on current budget.

- Taxes on production. This series includes Value added tax, tax on tobacco, hydrocarbon oils, stamp duties, National non-domestic rates and various other taxes. The biggest component, VAT, is also shown separately.
- Taxes on income. Included here are taxes on income and taxes paid by corporations. This includes Capital Taxes Series.
- Other taxes. Included in this series are motor vehicle taxes paid by households and inheritance tax.
- Compulsory social contributions. These are National Insurance Contributions.
- Interest and dividends. These are receipts of interest and dividends to central government.
- Other receipts. These include rent and other current transfers, including oil royalties and the 3rd generation mobile phone spectrum net receipts.
- Interest. This is interest paid by central government to the private sector and the rest of the world.
- Net social benefits. Includes Social security benefits and other benefits paid to households by central government.
- Other current expenditure. This includes current expenditure on goods and services, subsidies, current grants within general government and some other current transfers.

Gross saving is derived by subtracting total current expenditure from total current receipts, the surplus on current budget is then derived by taking account of depreciation.

## Public sector aggregates (not seasonally adjusted)

 (Table 17.3)Table 17.3 show the key public sector balances drawn from national accounts, plus the public sector net cash requirement.

## The surplus on current budget

This is net saving plus capital taxes (B8n+D91 uses from the national accounts). The surplus on current budget represents the balance of revenue over current expenditure, whereas net borrowing (see below) measures the overall budget deficit, i.e. the balance of receipts over expenditure, both current and capital. This fiscal balance measures achievement against the Golden Rule, which states that over an economic cycle government should only borrow to finance investment. The surplus on current budget therefore represents the surplus available for investment.

## Net borrowing

(B9 from the national accounts). Net borrowing is a concept based on internationally agreed definitions. Net borrowing measures the change in the public sector's accruing net financial indebtedness. Net borrowing is an accruals concept, whereas the closely related net cash requirement is almost entirely a cash measure.

More information on the concepts in Tables 17.1, 17.2 and 17.3 can be found in a guide to monthly public sector finance statistics, GSS Methodology Series No 12, the ONS First Releases Public Sector Finances and Public Sector Accounts and Financial Statistics Explanatory Handbook.

## Selected financial statistics (Table 17.4)

This table shows a selection of financial statistics. Further details are to be found in Financial Statistics.

## Money stock and liquidity (Table 17.5)

There is no single, universally accepted, definition of money. Any single definition must be, to some extent, arbitrary: a range of monetary aggregates is therefore produced reflecting different bands on the spectrum of liquidity.

The current definitions of the monetary aggregates $\mathrm{M} 0, \mathrm{M} 2$ and M4 are detailed below, M3 formerly known as $£ \mathrm{M} 3$, ceased to be published (along with M1 and M3c) from July 1989 following Abbey National Building Society's conversion to a public limited company (see the Bank of England Quarterly Bulletin August 1989). NIBM1 (a measure of transactions money) ceased to be published in November 1990. M2 ceased to be published from December 1992 following the redefinition of deposits which, along with notes and coins, comprise M2.

MO comprises notes and coins in circulation outside the Bank of England plus bankers' operational balances with the Bank. For the major components of MO , the level for each month is
the average of the levels on all the Wednesdays of that month, and the change is the difference between those average levels (adjusted for any breaks in series).

M4 is made up of notes and coins in circulation with the public, together with all deposits (including certificates of deposit and other short-term paper) with banks and building societies denominated in sterling and held by the UK private sector (other than banks and building societies).

For further details see the Bank of England Quarterly Bulletin March 1981, June 1982, December 1982, March 1983, March 1984, May 1987 and August 1990. A fuller analysis of the figures is shown in Financial Statistics and in the Bank of England Quarterly Bulletin.

Details of breaks in monetary series are described in Technical Series paper No 23 entitled 'Breaks in Monetary Series' published by the Bank of England Statistical Abstract, Part 2' issued in November 1993. The definitions of the monetary aggregates were considered in a Discussion paper issued by the Bank in March 1990; responses to the paper, and the Bank's reaction to the responses were described in the August 1990 Bank of England Quarterly Bulletin, pages 336-37.

In the seasonally adjusted data, the adjustments are generally constrained to sum to zero over the financial year for the monthly and quarterly monetary aggregates and over the calendar year for sectoral data. (For further information on seasonal adjustments see page 30 of United Kingdom Flow of Funds Accounts: 1963-1976, published by the Bank of England in May 1978, the Bank of England Quarterly Bulletin June 1983, December 1986, February 1989, February 1991, August 1991 and February 1992).

## Selected interest rates, exchange rates and security prices

Details of the series can be found in chapter 7 of Financial Statistics.

## 18. Prices and wages

## Consumer Prices Index (CPI) (Tables 18.1-18.2)

The Consumer Prices Index is the main United Kingdom domestic measure of inflation for macroeconomic purposes. Like the RPI (see below) it measures the average change from month to month in the prices of consumer goods and services purchased in the UK, but there are differences in coverage and methodology. A detailed description of these differences is given in the paper entitled 'The New Inflation Target: the Statistical Perspective'. This paper is available on the National Statistics website: www.statistics.gov.uk/StatBase/Product.
asp?vInk=10913 Since 10 December 2003, the Government inflation target for the UK has been defined in terms of the CPI measure of inflation. Prior to that the CPI had been published in the UK as the harmonised index of consumer prices (HICP); the two shall remain one and the same index. For further information on HICPs see below.

CPI inflation rates prior to 1997 and index levels prior to 1996 are estimated. See article on National Statistics website: www. statistics.gov.uk/cci/article.asp?ID=31. Also the coverage of CPI categories for health, education and miscellaneous goods and services have been extended between 2000 and 2002. Details are given in articles available on the National Statistics website: www.statistics.gov.uk/cci/searchres2.asp?ct=6\&term=HICP

Further details on the CPI are available from the National Statistics website: www.statistics.gov.uk/cpi

## Retail Prices Index (RPI) (Tables 18.3-18.5)

The Retail Prices Index is the most familiar general purpose measure of inflation in the UK, measuring the percentage changes month by month in the average level of prices of the goods and services purchased by the great majority of households in the United Kingdom. The uses of the RPI include indexation of pensions, state benefits and index-linked gilts. The weights used for combining the indices for the various groups of items are revised annually on the basis of information from the Expenditure and Food Survey (EFS), for (generally) the year ended in the previous June. Further details on the EFS and the annual Family Spending reports are available from the National Statistics website: www.statistics.gov.uk/Statbase/ Product.asp?vlnk=361

The index is calculated monthly in respect of a Tuesday near the middle of each month. Expenditure covered by the index does not include income tax payments, national insurance contributions, savings or investments (e.g. pension contributions and the capital element of mortgage payments for house purchase), gifts and donations which are not made in return for any specific service (e.g. church collections) and expenditure for which no 'unit of purchase' can be identified for purposes of price collection (e.g. on betting). For expenditure coming within the scope of the index a representative list of items has been selected and the prices of these items are collected each month. Quotations are obtained from shops and other outlets typical of those used by the majority of households, in around 150 areas throughout the United Kingdom. The prices used are the prices actually charged. So far as possible they relate to goods of unchanged quality at successive dates.

Further details on the RPI are available from the National Statistics website: www.statistics.gov.uk/rpi

## Definitions and explanatory notes

## Harmonised indices of consumer prices (HICPs) (Table 18.6)

This is calculated in each Member State of the European Union (EU), according to rules specified in a series of European Regulations developed by the EU statistical office in conjunction with the EU Member States. The HICPs are used to compare inflation rate across the EU. Since January 1999 it has also been used by the European Central Bank (ECB) as the measure of price stability across the Euro area.

More information on HICPs is available from the National Statistics website: www.statistics.gov.uk/hicp

## Purchasing power of the pound (Table 18.7)

Changes in the internal purchasing power of a currency may be defined as the 'inverse' of changes in the levels of prices; when prices go up, the amount which can be purchased with a given sum of money goes down. From January 1962 onwards, movements in the internal purchasing power of the pound are based on the Retail Prices Index (RPI). If the purchasing power of the pound is taken to be 100p in a particular year, the comparable purchasing power in a subsequent year is:

$$
100 \times \frac{\text { average price index for earlier year }}{\text { average price index for later year }}
$$

## Tax and price index (TPI) (Table 18.8)

The purpose and methodology of the Tax and Price Index (TPI) were described in an article in the August 1979 issue (No 310) of Economic Trends (HMSO, 1979). The purpose is to produce a single index which measures changes in both direct taxes (including national insurance contributions) and in retail prices for a representative cross-section of taxpayers. Thus, while the Retail Prices Index may be used to measure changes in the purchasing power of after-tax income (and of the income of non-taxpayers) the Tax and Price Index takes account of the fact that taxpayers will have more or less to spend according to changes in direct taxation. The index measures the change in gross taxable income which would maintain their after-tax income in real terms. Further information on the RPI is available from the National Statistics website: www.statistics.gov.uk/rpi.

## Coverage

Non-taxpayers and those with the top 4 per cent of incomes are excluded from the TPI. Non-taxpayers are excluded because the RPI, or the associated indices for pensioner households, already provide a measure of the change needed to maintain the purchasing power of their incomes. Those with high incomes are excluded because the changes in their tax liabilities
are not necessarily representative of the majority of taxpayers, and because broadly the same group is already excluded from the households on whose expenditure patterns the RPI is based. Otherwise everybody is included, whether working, unemployed or retired, so long as they pay tax. Non-taxable income, such as child benefit, is excluded from the TPI, and for consistency, so are the child tax allowances and taxed family allowances of earlier years.

From February 1987 onwards, housing benefit is included in the income base for calculating the TPI because of changes made to the RPI as a result of the RPI Advisory Committee's recommendations. The RPI now reflects changes in gross housing costs which, for a substantial minority of taxpayers, are partially offset by receipts of housing benefit.

The TPI reflects changes in people's tax and National Insurance contributions liabilities. If the index were instead to reflect actual payments it would be subject to highly erratic movements, which would be difficult to interpret and could be misleading.

## Calculation of the TPI

The current composition and distribution of gross taxable incomes are estimated from Inland Revenue's Survey of Personal Incomes (SPI). The gross income used in the calculation of the index is the taxable income of these individuals, i.e. their pay, self-employment income, pensions, taxable benefits and investment income. The estimated gross income, and tax liability, of each person in the sample at the turn of the calendar year forms the basis of the TPI.

## The survey of personal incomes

This survey consists of a stratified sample of all tax units about which information is available to the local offices of HM Revenue and Customs. The survey results are normally available in the summer a year after the end of the financial year to which they refer.

This means, for example, that the calculation of the TPI throughout 1994 had to be based on the 1991/92 SPI.

HM Revenue and Customs produce estimates of the distribution of gross incomes at the turn of the calendar year by projecting forward the incomes of each sample tax unit. Different projection factors are applied to income from each source, these factors being derived from aggregate data on incomes. The change in total tax liability resulting from any uniform increase in gross incomes can be estimated from this, so the change in gross income needed to offset a particular RPI increase can be found.

## Budget changes

Changes to direct taxes and employees' National Insurance contributions for the forthcoming financial year are announced in the annual budget and affect the TPI in the April following the budget. In other months the monthly changes in the TPI is normally slightly larger than that in the RPI (a more than proportionate increase in gross income being needed to offset any rise in prices, since all the extra income is fully taxed). However, it is the changes over 12 months which should be the focus of interest.

## Index numbers of producer prices (PPI) (Table 18.9)

There are two broad groups of Producer Price Indices; output prices and input prices. Output prices are the prices of goods produced by the manufacturers and sold to the home market. Input prices are the prices of materials and fuels purchased by manufacturers in order to produce their goods.

The Producer Price Indices are calculated from the price movements of around 9,000 closely defined products. It is a base weighted index working on the basket of goods concept. A wide range of representative products are selected and the prices of these goods collected each month. The movement in these prices are weighted to reflect the relative importance of the products in a chosen year (known as the base year) currently 2000. This price data is converted into a basic set of price indices from which broad series are built up. Output prices (products destined for sale in the UK) are grouped in accordance with the Standard Industrial Classification 1992 with weighting patterns based on overall sales by manufacturers within those groupings. Input prices are grouped in accordance with Input/Output table groupings. The indices published are widely used by business in price escalation clauses in contracts and for monitoring price movements in the products they trade.

The high level index numbers shown in Table 18.9 are constructed on a net sector basis, - i.e. the index for any sector relates only to transactions between that sector and other sectors, within-sector sales and purchases are excluded. For example, the index for materials and fuel purchased by manufacturing industry is designed to reflect only changes in the prices of purchases that manufacturing industry taken as a whole obtained from the UK non-manufacturing sector and from abroad, it does not reflect changes in the prices of purchases from within the UK manufacturing sector. The index numbers for selected industries in Table 18.9 are constructed on a gross sector basis, i.e. all transactions are included in deriving the weighting patterns, including sales within the same industry.

The indices relate to average prices for a month. The full effect of a price change occurring part-way through any one month will only be reflected in the index for the following month. The index numbers are compiled exclusive of VAT. Excise duties (on cigarettes, manufactured tobacco, petroleum and alcoholic liquor) are included.

## Construction output price index (column JYYC in Table 18.9)

The index relates to quarterly changes in the price actually being paid for new building and civil engineering work being carried out at the time in Great Britain, excluding repair and maintenance. It is a weighted combination of the separate tender price indices for contractors' output in six work sectors, for several previous quarters up to the quarter to which the index refers. A description of the methodology the indices was given is in Economic Trends No 297, July 1978.

## Monthly house price index of all dwellings, by region (Table 18.10, series FCBA in Table 18.9)

Information on dwelling prices at national and regional levels are collected and published by the Department for Communities and Local Government (DCLG) on a monthly basis from a sample survey of mortgage completions, the Regulated Mortgage Survey (RMS) which replaced the Survey of Mortgage Lenders (SML) in November 2005, consequently data for September 2005 quarter 3 and annual data 2005 are based on a mixture of data from both surveys. The Survey covers banks and building societies, who supply data to the Council of Mortgage Lenders (CML)/BankSearch.

Data prior to 2002 Q1 were derived from a 5 per cent sample of completions data and were calculated on an old mixadjusted methodology. As a consequence of a significantly increased sample, the DCLG were able to introduce a new monthly series. The mix-adjusted methodology was also enhanced. The monthly series are available back to February 2002. The quarterly series from 2002 Q2 have also been revised to reflect the monthly house price figures, and the quarterly and annual series were rebased to 2002 Q1. The RMS survey has around 50,000 cases per month.

Series FCBA provides a monthly, quarterly and annual mixadjusted index for the average price of new dwellings at mortgage completion stage for the UK. Note that the index should be treated with caution as there are relatively small numbers of new dwellings, and prices of new homes tend to be more volatile than for existing homes, often because of variations in the additional features that are included in some new developments but not in others.

## Definitions and explanatory notes

The indices in Table 18.10 are based on the mix-adjusted index average prices of all dwellings at mortgage completion stage by Government Office Region. The series are not seasonally adjusted.

Prices are based on completions (rather than mortgage approvals) because they relate to dwellings actually purchased. A small but significant number of mortgage approvals do not result in completed transactions.

Why and how is the index 'mix-adjusted'? If the index were based on changes in the simple average price, the movements of the index would be influenced by changes in the mix of properties bought in each period. This effect is removed by applying fixed weights at the start of each year, based on the average mix of properties purchased during the previous three years.

The mix-adjusted indices exclude sitting tenant ('right-to-buy') purchases, cash purchases, remortgages and further loans.

Further mix-adjusted average prices and indices are available on the DCLG website, within the Housing Statistics section www. communities.gov.uk/housingstatistics.

## Indices of producer prices of agricultural products and of purchase prices of the means of agricultural production (Table 18.11)

The monthly and annual index numbers of agricultural prices in the United Kingdom cover all the main agricultural products and also the main groups of materials currently consumed by agriculture. The indices are currently based on the calendar year 2000. They are designed to provide short-term and medium-term indications of movements in these prices. All annual series are base-weighted Laspeyres type, using value weights derived from the Economic Accounts for agriculture 2000 prepared for the Statistical office of the European Union. Monthly indices for some purchase prices and non-seasonal product prices are calculated using annual weights and base prices which are weighted means of the 2000 monthly prices. Monthly indices for seasonal product prices and the following purchase prices; Seeds, Energy \& Lubricants, Fertilisers and Animal Feedstuffs are calculated using a monthly weight which is the annual weight of the product distributed over its trading months. The base prices used are weighted of the 2000 monthly prices. Prices are measured exclusive of VAT. For practical reasons, it has generally been necessary to measure the prices received by producers (outputs) at the first marketing stage and prices of materials (inputs) ex-supplier.

The construction of the indices enables them to be combined with similar indices for other member countries of the

European Union to provide an overall indication of price trends within the Union which appears in the Union's Eurostat series of publications.

Index numbers at a more detailed level and for earlier based series are available from the Department for Environment, Food and Rural Affairs, Stats SSFE, FCA Div4, Food Statistics Branch, Room 146, Foss House, King's Pool 1-2 Peasholme Green, York, YO1 7PX. Tel 01904 455253, or 01904455249.

## Average weekly earnings and hours worked in manufacturing and certain other industries (Tables 18.12-18.14)

The Annual Survey of Hours and Earnings (ASHE), covers a one per cent sample of employees in employment in all sectors of the UK economy. Information is collected from employers on the earnings and hours of individual employees in the payperiod containing a particular date in April each year.

The earnings figures relate to gross pay before tax, National Insurance or other deductions, and exclude payments in kind. They are restricted to earnings relating to the survey pay period, and so exclude payments of arrears from another period (any payments due as a result of a pay settlement but not yet paid will also be excluded). Changes in average earnings between successive surveys represent the combined effect of a number of factors, including: (a) pay settlements implemented between the April survey dates (the changes in average earnings for particular groups of employees may be affected by changes in the timing of settlement); (b) variations in the amount of overtime and other payments relative to basic pay; and (c) changes in the proportions of employees in different occupations and industries.

The survey sample is largely drawn from records of those who are members of Pay As You Earn (PAYE) schemes, and so its coverage of people with very low weekly earnings - mostly part-time employees - is incomplete. Most published results are confined to full-time employees on adult rates whose earnings for the survey pay-period were not affected by absence.

The ASHE survey provides a wealth of detailed information on the levels, distribution and make-up of earnings in the United Kingdom. The results of the survey are on the ONS website http://www.statistics.gov.uk/Statbase/Product.asp?vInk=13101.

## Index of average earnings of all employees (AEI) (monthly inquiry) (Tables 18.15-18.16)

The Average Earnings Index (AEI) is designed to measure changes in the level of earnings, i.e. wage inflation in Great Britain. Average earnings are calculated as the total wages and
salaries paid by firms, divided by the number of employees paid. Like all indices, changes are measured against a base year, whose index value is set to 100 . The current base year is 2000 for both Tables 18.15 and 18.16.

Indices are given for 20 industry groups of the Standard Industrial Classification 1992, all manufacturing industries, production industries, all service industries, public and private sectors and the whole economy. For the last six indices, actual and seasonally adjusted figures are given, together with percentage changes over the previous 12 months for seasonally adjusted and 3 -month rate of average earnings. The main indicator of growth, is based on the annual change in the seasonally adjusted index values for the latest three months compared with the same period a year ago. The use of a threemonth average reduces the level of volatility seen in the data on a month-on-month basis. For a fuller description of the three-month headline rate of earnings growth see the May 1998 edition of Labour Market Trends, page 259.

## Strengths of the AEI

The AEI, based on monthly survey data, is a timely indicator of changes in the level of earnings.

## Limitations of the AEI

The index is not adjusted for any changes in the composition of the workforce such as changes in the share of full time and part time workers, or in the share of skilled and unskilled workers. Similarly, the index does not account for changes in the number of hours worked, or any temporary factors that affect earnings.

The sample of the Monthly Wages and Salaries Survey on which the AEI is based is not designed to provide information on the level of earnings. The sample is not completely representative of the economy as firms with fewer than 20 employees are excluded, as are the earnings of self employed persons.

The AEI only covers earnings in Great Britain as earnings information is not collected for Northern Ireland and regional data are not available.
households covered by accommodation and residential care licences.

## UK cinema statistics (Table 19.2)

Cinema admissions collected on behalf of the Cinema Advertising Association by Nielsen EDI. Admissions figures are collected on a weekly basis from virtually all cinemas in the UK.

## Earnings and expenditure on overseas travel and tourism (Table 19.4)

Table 19.4 shows estimates of UK earnings from overseas visitors and expenditure by UK residents on visits abroad. The figures come from the International Passenger Survey, a sample survey of people as they enter or leave the country through the principal air, sea or tunnel routes. They exclude payments for travel to and from the UK.

An overseas visitor is defined as someone who is permanently resident in a country outside the UK and who visits the United Kingdom for a period of less than 12 months. UK citizens resident abroad for 12 months or more who visit the UK for less than a year are included in this category. Similarly, visits abroad are visits for a period of less than 12 months by people permanently resident in the UK (but who may be of foreign nationality).

Until April 1999 the IPS did not cover routes to and from the Irish Republic. All current estimates are supplemented by data provided by the Central Statistics Office in Ireland to produce the figures in the table.

## 20. Weather

## District summary (Table 20.1) <br> Annual summary (Table 20.2)

Further details on weather statistics or an explanation of the methodology used in this table may be obtained from the Met Office, Fitzroy Road, Exeter, Devon, EX1 3PB. Telephone 0870 900 0100, Fax 08709005050 or email: enquiries@metoffice. com

## 19. Leisure

## Television Licences (Table 19.1)

These figures are compiled by Capita Business Services Ltd. and represent the total number of annual licences in force at the end of the period. They include about 40,000 licences issued at a reduced fee to the blind but exclude an estimated 555,000

[^39]
## Met Office

[^0]:    1 Total computerised claims only.

[^1]:    Source: Labour Force Survey, Office for National Statistics: 02075336094

[^2]:    Components may not add to totals due to separate rounding
    2 The introduction of the Scottish Crime recording Standard on 1 April 2004 has increased the number of minor crimes recorded, such as minor crimes

[^3]:    1 For further information refer to Section 6 of the Annual Supplement in the 2 Yield data are marketed yield and production data are home production market-

[^4]:    1 Excluding snuff.

[^5]:    Note: The figures contain, where appropriate, an adjustment for stock 2 These sum to the total of 1000 for the production industries. 3 Includes adjustments to standardise the length of months.

[^6]:    Note: The full productivity and unit wage costs data sets with associated ar-
    ticles can be found on the National Statistics website at: www.statistics.gov.uk/productivity.
    1 Output per filled job is the ratio of the output index numbers published in Table 7.1 and productivity jobs. A monthly series for total manufacturing industries is presented in Table 7.3.
    2 Whole economy output per job is based on Gross Value Added at Basic Prices.

[^7]:    Not seasonally adjusted.
    2 Coal, petroleum and natural gas are temperature corrected.
    3 For details of temperature correction see DTI energy statistics website at www.dti.gov.uk/energy/inform/dukes/dukes2004/01 longterm.pdf.
    4 Includes solid renewable sources (wood, straw, waste, geothermal and ac-
    tive solar heat) net foreign trade and stock changes in other solid fuels.

[^8]:    5 Excludes non-energy use. A statistical month adjustment has been removed 6 Includes gas used during production, colliery methane, landfill gas and sewage gas. Excludes gas flared or re-injected and non-energy use of gas.
    7 Includes generation at wind stations. Excludes generation from pumped storage stations.

[^9]:    1 Disposals by collieries and opencast sites.
    2 Coal-fired power stations belonging to major electricity generating companies.
    3 Generation of heat for sale under the provision of a contract.
    6 Including miners' coal.
    7 Includes public administration and commerce.
    8 Excluding distributed stocks held in merchant's yards, etc, mainly for the
    4 Low temperature carbonisation and patent fuel plants.
    5 Includes estimates of imports.

[^10]:    1 Fuel used and electricity generated by major power producers and electrici-
    ty available through the grid in England and Wales and from distribution
    companies in Scotland and Northern Ireland. For further information regard-
    ing major power producers please refer to Section 8 of the Annual Supple-
    ment in the January edition of Monthly Digest.
    2 Including quantities used in the production of steam for sale.
    3 Including oil, windpower and refuse-derived fuel.

[^11]:    1 The term indigenous is used in this table for convenience to include oil from the UK Continental Shelf as well as the small amounts produced on the mainland.
    2 Foreign trade as recorded by the petroleum industry and may differ from figures published in the Overseas Trade Statistics.
    3 Crude oil plus condensates and petroleum gases derived at onshore treatment plants.
    4 Crude oil, natural gas liquids (NGLs) and process oils (i.e. partly refined oils).
    5 Crude oil plus NGLs.

[^12]:    1 Including amounts for petro-chemicals.
    2 Ethane and other petroleum gases (OPG)
    3 Excluding Orimulsion and refinery fuel.
    4 Including other petroleum gases, aviation spirit, wide-cut gasoline, industrial and white spirits, petroleum wax, non-domestic standard burning oil and miscellaneous products, but excluding refinery fuel.
    5 Includes gas oil, marine diesel oil and middle distillate feedstock.

[^13]:    ONS website at http://www.statistics.gov.uk/ as and when available.

[^14]:    1 Increases in stock are shown as + and decreases in stock (ie deliveries 2 Currently mainly old rails for re-rolling.
    from stock) as -
    3 Derived from HM Customs statistics.

[^15]:    1 Footnotes as 1 and 2 on Table 10.4.
    Note: From December 2006 (reference period October 2006) constant price
    seasonally adjusted data will no longer be available.

[^16]:    1 As from the end of 2004, quarterly data will not be collected for these industries. Annual results for the years 2005 onwards will be published on the ONS website at http://www.statistics.gov.uk/ as and when available.

[^17]:    1 Including the value of speculative building when work starts on site.
    2 Excluding orders for home improvement work.
    3 Provisional.
    4 Revised

[^18]:    1 Excluding slate residue used as fill.

[^19]:    1 The annual figures are the sum of the monthly figures provided by the CAA.
    All kilometre statistics are based on standard (Great Circle) distance. Including weight of freight and mail, excess baggage and diplomatic bags, but excluding passengers' and crews' permitted baggage.
    2 Provisional figures.

[^20]:    Note: Sea and Air passenger numbers are seasonal, which should be taken into account when comparing figures within a year.

    1 Includes Hovercraft passengers.
    2 Including Albania, Bulgaria, Czech Republic, Hungary, Poland, Romania and Commonwealth of Independent States.
    3 Including Faroes, Gibraltar, Iceland, Luxembourg, Croatia, Slovenia and Bosnia-Herzegovina.
    4 Including Jordan, Lebanon, Israel and Syria.
    5 Including Algeria, Egypt, Libya, Morocco and Tunisia.
    6 Including Bahamas, Barbados, Bermuda, Cayman Islands, French Antilles, Jamaica, Leeward Islands, Netherlands Antilles, Puerto Rico, Trinidad and Tobago, Turks and Caicos Islands, US Virgin Islands and Windward Islands.

[^27]:    1 Includes the ten countries which joined the EU on 1 May 2004; Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, Slovenia.

[^28]:    1 Includes the ten countries which joined the EU on 1 May 2004; Cyprus,
    Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slo-
    vakia, Slovenia.

[^29]:    1 National accounts entities as defined under the European System of Accounts 1995 (ESA95).

    4 Net borrowing = net investment minus surplus on current budget
    5 Previously called Public Sector Borrowing Requirement (PSBR).
    2 Net saving, plus capital taxes.

[^30]:    less depreciation.

[^31]:    1 For further details see Financial Statistics, Tables 1.2E, 3.2B, 4.2A, 4.3A, 4.3B, 5.2D, 6.2A, 10.5D

    2 Total administered by the Department for National Savings.
    3 Including open ended investment companies (OEICs).
    4 Monthly figures relate to calendar months.
    5 Data have been revised back to February 2003 due to the inclusion of some additional other specialist lenders and the removal of some non-resident

[^32]:    Note: Further information on the consumer prices index is available from the National Statistics website: www.statistics.gov.uk/cpi

    1 Prior to 10 December 2003, the consumer prices index (CPI) was published in the UK as the harmonised index of consumer prices (HICP).
    2 Inflation rates prior to 1997 and index levels prior to 1996 are estimated. Further details are given in Economic Trends No. 541 December 1998. These details are also available on the National Statistics website: http://www.statistics.gov.uk/cci/article.asp?ID=31\&Pos=3\&Col-
    Rank=2\&Rank=720

[^33]:    Note: Further information on the RPI is available from the National Statistics 2 Seasonal food is defined as items of food the prices of which show significant Website: www.statistics.gov.uk/rpi
    1 This series has been constructed using the index for all items excluding mortgage interest payments prior to February 1995.
    seasonal variations. These are fresh fruit and vegetables, fresh fish, eggs and home-killed lamb.

[^34]:    Note: Further information on the RPI is available from the National Statistics
    Website: www.statistics.gov.uk/rpi.

[^35]:    Note: Further information on the RPI is available from the National Statistics Website: www.statistics.gov.uk/rpi.

    1 To find the purchasing power of the pound in 2000, given that it was 100 pence in 1990, select the column headed 1990 and look at the 2000 row. The result is 74 pence. These figures are calculated by taking the inverse ratio of the respective annual averages of the Retail Prices Index (RPI).

[^36]:    1 In 2004 a number of supplementary surveys were introduced to improve the coverage of the Annual Survey of Hours and Earnings. Data for 2004 are presented including these supplementary surveys (top). Figures are also presented excluding supplementary surveys (bottom) to give figures comparable with earlier years.

[^37]:    1 The most recent month's data is subject to revision.
    2 Single month and 3-month averages show the percentage change year on year.

[^38]:    Anomalies are with respect to the 1961-90 averaging period.

[^39]:    Weather, 20.1, 20.2
