REPORT.

To the Controller-General of the Commercial, Labour, and Statistical Departments of the Board of Trade.

SIR.

I have the honour to present the Third Annual Report of the Labour Department of the Board of Trade, with Abstract of Labour Statistics. During the year 1895-96 no material change has taken place in the character and scope of the work of the Department. The Conciliation Act, which became law on 7th August 1896, empowers the Board of Trade to take certain action with regard to the settlement of labour disputes, and imposes fresh work on the Department, but this change does not affect the period covered by the present report.

As in previous years, the Department has been, to some extent, concerned in facilitating the amicable settlement of certain disputes between employers and employed; but, except in the case of a question of wages and hours of labour affecting bricklayers and labourers in the Potteries district, which was referred by the parties to the decision of an umpire appointed by the Board of Trade, all action in this direction has been of an informal character, and cannot with advantage be described in detail in an official report. In the case of the dispute above referred to, Sir William Markby consented to act as umpire at the request of the Board of Trade, and his decision (of which particulars are given in the "Labour Gazette," May 1896, p. 145) was accepted by both parties. Inquiries have been made during the year with regard to the hours of labour of boys apprenticed to lightermen on the Thames in consequence of representations made to the Board of Trade on this subject, and steps are now being taken which will, it is hoped, lead to a satisfactory arrangement.

The alterations and extensions which from time to time have become expedient in the various statistical publications of the Department have been fully explained in those reports as they have appeared. It is here sufficient to say that the scope and variety of the statistics collected periodically by the Department with regard to disputes, wages, and other matters affecting labour, have been gradually extended, and it is satisfactory to be able to report that there is an increasing willingness on the part both of employers and workmen to supply information, as they become familiar with the methods of the Department and

the use made of the information so supplied.

Thus, in the "Labour Gazette" for August 1896 the substance of 3,159 returns was embodied, viz., 1,379 from employers or

xiv

employers' associations, 1,511 from workmen or workmen's associations, and 269 from official and other miscellaneous sources. This total compares with 2,539 returns, viz., 1,071 from employers, 1,238 from workmen, and 230 from other sources received for the purpose of the "Gazette" a year ago.

The monthly returns, regularly received from employers and others as to the total numbers of employed now cover 494,610 persons, compared with 334,493 a year ago. These figures are exclusive of agriculture, the textile trades, and seamen, with regard to which the monthly returns received have increased from about 200 in August 1895, to 260 at the present time. The number of trade unions making monthly returns as to the proportion of unemployed has risen from 86 with a membership of 391,093 to 109 with a membership of 425,841.

The usual annual reports on changes in wages, on strikes and lock-outs, and on trade unions have been prepared. In the case of the trade unions report the great extension of the number of societies making returns has led to a modification of the scheme of the report. This has necessitated holding back the volume for 1894, which will, however, appear almost immediately, combined with the Report for 1895.

Steps have been taken which, it is hoped, will enable these annual reports to be published in future at an earlier date than

has hitherto been possible.

Among the principal subjects now being investigated, in addition to those on which annual reports are regularly published are:—Fluctuations in employment in various trades; agricultural wages and earnings; the history of women's employment in certain industries; and the wages of domestic servants. Materials are also being collected with a view to the annual publication of an abstract of Foreign Labour Statistics. Mr. Schloss's report on "Contracts given out by "public authorities to Associations of Workmen," undertaken at your direction in pursuance of a recommendation made by the Royal Commission on Labour, is now complete and is in the press.

With regard to the Abstract of Labour Statistics appended to this Report fewer changes have been made than last year in the substance and arrangement of the tables. The principal new features to which attention may be called are the tables on pages 79-83, showing the production of coal, iron, and the other principal minerals and the tonnage of vessels launched in each of the years 1880 to 1895. The tables on pages 78, 84, and 85, showing for a series of years the number of persons employed in coal-mining, the changes in the ascertained prices of coal and iron, the exports of coal from different groups of ports and (page 105), the percentage changes in coal miners' wages in different districts also appear in the Abstract for the first time. Though the general subjects of trade and manufactures, exports, imports, and prices hardly fall within the scope of an Abstract of Labour Statistics, yet variations in production and prices have such

a close bearing on changes in employment and wages that it has seemed desirable in the case of a few of the most important fluctuating industries for which figures are available to give some statement of these variations over a series of years. Again, the intimate connection of the growth or decline of the export coal trade with the state of employment in certain coalfields has been thought to justify the inclusion of a table on page 85, showing the variations in exports of coal from the

chief groups of ports during the past ten years.

The following are among the chief alterations made in the other tables included in the volume. The tables relating to trade unions state most of the particulars up to the end of 1895. Most of last year's tables only referred to 1893, but it has been possible in the present volume to bring the information more up to date. The comparison given in the tables on pages 2 and 5 of income, expenditure on various objects, funds, &c., is confined to 100 of the principal societies, instead of extending to all unions making returns in each year, as in previous reports. Thus a more exact comparison can now be made over a period of years.

It has also been found possible in the tables on trade disputes, on pages 58-63, to give the final figures for the past year, and not only preliminary figures, as in previous reports. A new table is given on page 59, grouping trade disputes according to their causes, and another on page 60, showing the aggregate number of working days lost through disputes in each of the past six years. Among the tables on industrial accidents (pages 143-51) there is now given for the first time a table of fatal accidents to quarrymen, reported under the Quarries Act, which came into operation in 1895. The table of employment of dock labour in London (pages 74-5) has been enlarged to include those employed at the principal wharves. The table on page 153 classifies convictions under the Factory and Workshop Acts according to the main groups of trades.

In addition to the above, a considerable number of minor alterations have been made, besides the inclusion of later figures

in most of the tables.

To balance the additions, the tables relating to education have been omitted, in order not unduly to increase the size of the Abstract.

It has been thought desirable to prefix to the Abstract of Labour Statistics for 1895-96 a short summary of the principal statistics therein contained, so far as they relate to the year 1895. The following summary, therefore, gives a brief account of the condition of labour in the United Kingdom in 1895, so far as recorded in the statistics collected by or available to the Department. It is to be understood that the tables which do not specially refer to 1895 are not here dealt with. More detailed information with regard to several of the subjects, e.g., trade unions, trade disputes, wages, &c., can be obtained by consulting the special reports relating thereto, issued by the

xvi REPORT.

Board of Trade, references to which will be found in notes to the tables.

For various reasons it is convenient to deal with the subjects in a different order from that in which they are treated in the tables.

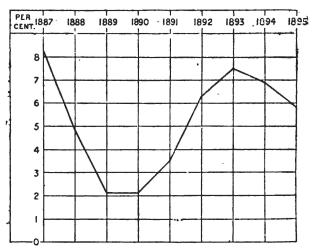

LABOUR STATISTICS FOR 1895.

I. Employment, Production, and Prices.

State of Employment.—The Tables given on pp. 67-78 under the heading "Fluctuations in Employment" show that the state of the labour market in 1895 was better than in the preceding year. The returns received from trade unions show that the average percentage of their members described as unemployed during 1895 was 5.8 compared with 6.9 in 1894 and 7.5 in 1893.

The following chart shows the variations in employment over a period of nine years (1887 to 1895), so far as indicated by the trade union returns, showing the number of their unemployed members.

CHART showing the variation in mean percentage of members of trade unions returned to the Board of Trade as unemployed during each of the years 1887 to 1895, inclusive.

On the whole, employment was better in 1895 than in 1894 and 1893, and slightly better than in 1892 (when the average percentage of unemployed was 6.3), but did not reach the level of 1891, when it stood at 3.5. The improvement was most marked in the latter half of the year. The percentage of unemployed was highest at the end of January (8.2), and lowest at the end of November (4.3).

The table on page 70 shows that the building trades continued well employed during the year (with an average proportion of 3.8 per cent. unemployed), while the engineering, metal and

shipbuilding trades showed some improvement, the percentage of unemployed having fallen from 11.3 in 1894 to 8.2 in 1895.

The state of employment in coal mines (see pages 76-7), showed some improvement compared with the previous year, the average number of days worked per week at collieries making returns being 4.85 in the year 1895-6 compared with 4.72 in 1894-5. The average number of days worked by the mines was greatest in South Wales (5.28 days per week), and least in the Midlands* (4.35 days per week). Every important district shared to some extent in the improvement except Northumberland, where the average fell from 4.85 to 4.76 days per week. The number of persons employed under the Coal Mines Regulation Act (page 78) was 700,284, a decline compared with the corresponding figure (705,240) for 1894. All the important districts shared in this decline except South Wales, where the number rose from 124,655 in 1894 to 126,199 in 1895.

Production.—The table on page 79 shows that in the principal branches of mineral production in the United Kingdom there was an increase in 1895 compared with 1894. The only important minerals of which the production fell off were salt, and lead, tin and zinc ores. The increase in coal production was only slight compared with 1894, the total being 189,661,362 tons compared with 188,277,525 tons in the previous year, in the early part of which production was abnormally stimulated in many districts after the great coal stoppage of 1893. The only important district which showed a marked increase of production in 1895 was the West of Scotland (22,204 thousand tons compared with 16,796), which in 1894 had been affected by a prolonged dispute.

Closely connected with the statistics of coal production are the figures showing the export of coal from various ports. On the whole, rather more coal was exported from the United Kingdom in 1895 than in 1894 (33,101 thousand tons compared with 33,074 thousand). The increase, however, was almost entirely from Scottish ports (4,728 thousand tons compared with 3,376 thousand in 1894, the year of the Scottish coal dispute). All the chief ports of England and Wales show a falling off, especially the Tyne ports, where exports fell from 8,379 thousand tons in 1894 to 7,790 thousand in 1895.

The production of iron ore and ironstone in 1895 amounted to 12,615,414 tons, compared with 12,367,308 tons in 1894. The improvement was mainly in Scotland, Yorkshire, and part of the Midlands; Cumberland and Lancashire showing a falling off. In this connection it must be remembered that the Scottish iron industry was largely affected in 1894 by the prolonged coal dispute, and the total production in Scotland in 1895 (824,673)

^{*} Including Staffordshire, Nottinghamshire, Leicestershire, Worcestershire, Shropshire, Derbyshire, and Warwickshire.

tons), though a large increase compared with 631,304 tons in 1894, was not equal to the total (847,406 tons) in 1893.

The production of oil shale rose from 1,986,385 tons in 1894 to 2,246,865 tons in 1895.

On page 82 are given statistics of pig-iron production from 1880 to 1895. It will be seen that the production of pig-iron was 7,703,459 tons in 1895, compared with 7,427,342 tons in 1894. In 1895 the total product was almost identical with the yearly average of the last 16 years (7,703,453 tons). The increase in 1895 over 1894 is more than accounted for by the great rise in Scotland, which produced 1,048,774 tons of pig-iron in 1895, compared with only 642,243 tons in 1894 (the year of the Scottish coal dispute), and 793,055 tons in 1893. In England the production fell from 6,785,099 tons in 1894 to 6,654,685 tons in 1895.

The average number of furnaces in blast throughout the year was $343\frac{10}{12}$, compared with $324\frac{6}{12}$ in 1894. The table shows in a striking way the decrease in the number of furnaces in blast since 1880, although the total production has remained about steady. Thus, in 1880, with an average of $567\frac{1}{2}$ furnaces in blast, almost exactly the same amount of pig-iron was produced as in 1895, with an average number of $343\frac{10}{12}$ furnaces, indicating an increase of production per furnace of 64 per cent.

The net tonnage of vessels built (i.e., launched) in the United Kingdom (excluding war ships for Her Majesty's Government), shows a falling off compared with 1894, the total being 647,634 tons compared with 669,492 tons. The figure for 1895, however, was above the average for the last 16 years. The North-East coast showed a slight improvement, but the Clyde a falling off. In regard to the somewhat unexpected fact of the decline in the tonnage for the year 1895, it should be explained that the figure for each year represents the tonnage launched during that year, and hence is not an accurate measure of the amount of work performed during the year. It is only when the figures are taken for a period of years that their variations correspond closely to the true fluctuations in employment.

Prices of Coal and Iron.—On page 84 a table is given showing for a period of 16 years the ascertained prices of coal and iron in various districts. The figures given are in each case the mean for the year of the realised prices as ascertained periodically from an accountant's examination of certain employers' books. These prices are largely used in regulating changes of wages under sliding scales. The average price of Cleveland pig iron ("No. 3") for 1895 was 35s. 2.95d. per ton, almost exactly the same figure as for 1894, when the average was 35s. 3.08d. The lowest average price recorded during the 16 years was in 1886 (30s. 8.92d.), and the highest in 1890 (47s. 8.28d.), a difference of over 50 per cent.

Manufactured iron and steel showed a fall in price in 1895, both in the North of England and the Midlands, compared with

the previous year; the ascertained average in the former district being 4l. 15s. 478d. compared with 4l. 17s. 6.01d., and in the latter 5l. 12s. 11.22d. compared with 5l. 18s. 2.15d. In regard to the difference in price in the two districts, it is to be remembered that the articles on which the average is taken are not the same in the North as in the Midlands.

The ascertained prices of coal are only published for South Wales and Northumberland. The figure for South Wales was 9s. 6.949d. per ton (f.o.b.) compared with 10s. 9.335d. in the previous year. In Northumberland it was 5s. 6.68d. (at pit's mouth) compared with 6s. 5.99d. in 1894.

II. Wages and Hours of Labour.

Changes of Wages in 1895.—On the whole there was a fall in wages in 1895. The preliminary figures given on page 98 for 1895 show that the changes recorded in 1895 affected an aggregate of 1,014,700 persons; in which total, however, only 442,900 separate individuals are included, many persons whose wages changed more than once during the year being counted more than once in the general aggregate. Of the total number of separate individuals, 80,300 gained a net rise, 356,900 sustained a net fall of wages, while the remaining 5,700 finished the year with their wages at the same level as at the beginning. The net result of all the changes on the wages of those affected by them was an average fall of 1s. 41d. per week compared with almost exactly the same figure (1s. $4\frac{1}{4}d$.) for 1894, though the aggregate fall in 1894 was larger than in 1895, being spread over a greater number of persons. With regard to the fact that wages fell nearly as much during 1895 as in 1894 in spite of the improvement in the labour market, reference may be made to the "Report on Changes of Wages " and Hours of Labour in 1894 with preliminary figures for " 1895" issued by the Department, in which the subject is discussed, and it is shown that under the operation of sliding scales and similar methods of adjusting wages, changes in rates of wages tend to follow rather than to synchronise with changes in the labour market.

The fall of wages was mainly in the coal mining industry, in which 316,000 persons had their wages lowered. During 1895 the general rates of wages for coal miners (see page 105) fell 83 per cent.* in South Wales, 10 per cent. in Durham and Northumberland, and 121 per cent. in Scotland. In Yorkshire, Lancashire, and the Midlands, where they fell 10 per cent. in 1894, no further fall took place in 1895. In the building trades wages increased in 1895, as in the previous year, while in the metal, engineering, and shipbuilding group the changes were

^{*} It is to be understood that the percentage reductions and advances are calculated on the standard wages of 1879 or 1888, and not on the wages current at the time.

XX REPORT.

fairly balanced, with a tendency to a decline. In the textile and clothing trades the increases, though not important, overbalanced the decreases.

Changes in Hours of Labour.—The changes in hours of labour in 1895 were not so important as in 1894, the year of the introduction of the "eight hours day" into Government factories. The numbers affected by changes in the two years were 22,735 and 77,158 respectively. In each year the general tendency was towards shorter hours, the net effect of all the changes being in 1895 a reduction of about 2 hours per week for the men affected by the changes; the corresponding figure for 1894 being 4 hours.

A few cases were reported in 1895 of reversions to longer hours, after unsuccessful experiments in introducing an "eight-"hours day."

III. Trade Disputes, Arbitration, and Conciliation.

Trade disputes.—The tables given on pp. 58-63 show that on the whole the year 1895 has been less disturbed by trade disputes than any of the years immediately preceding it. The number of disputes recorded was 876, compared with 1,061 in 1894, and the number of persons affected 263,758, compared with 324,245 in 1894 and 636,386 in 1893, the year of the great coal dispute.

The aggregate number of working days lost owing to trade disputes in 1895 is estimated at 5,542,652, or less than half a day per head of the entire working population. This is the lowest aggregate recorded in any year during the period for which the statistics have been collected. The corresponding total in 1894 was 9,322,096; in 1893 it reached 31,205,062; in 1892 it was 17,248,376; in 1891, 6,809,371; and in 1890, 7,317,469.

While the disputes in 1895 were less extensive and less prolonged than in the previous year, the degree of success attained by the workpeople was greater, the percentage of persons engaged in disputes who were wholly unsuccessful being 27.9, compared with 42.1 in 1894. Of the remainder, 24.1 per cent. (compared with 22.1 per cent. in 1894) were wholly successful, and 47.1 per cent. (compared with 34.2 per cent.) partially so.

In the table on page 59 the trade disputes are grouped according to their causes. It appears that in 1895 out of the 263,758 persons affected by all the disputes of the year, 143,198 were concerned in wages disputes, 2,858 in disputes about hours of labour, 84,393 in disputes as to working arrangements, and 4,467 in disputes as to the employment of other classes of workpeople.

As is natural in a year of reviving trade, the more important wages disputes in 1895 were due to demands for an advance, 94,761 workpeople having struck for an increase, and only 47,038

against a decrease of wages. In the previous year the numbers were more equal (117,028 for increase and 109,302 against decrease), while in 1893 the number who resisted reductions nearly doubled those who struck for an increase.

The great bulk of the persons affected by the disputes of 1895 are accounted for by four great groups of trades, mining and quarrying (83,879), textile trades (57,415), clothing trades (57,078), and metal, engineering, and shipbuilding trades (46,314), leaving only 19,072 among all other groups of trades, including 9,898 affected by no less than 197 disputes in the building trade.

The most important dispute of the year was in the boot and shoe trade, affecting 46,000 persons, which was settled at a conference at the Board of Trade.

The months of the year most prolific in disputes were March (61,136 persons affected) and August (46,908 persons). The months most free from fresh disputes were December (6,527 persons) and February (7,634 persons).

The parts of the country most affected in proportion to population were Wales and Monmouthshire (43,222 persons out of a population of 1,776,405), and Scotland (62,770 out of a population of 4,025,647).

Arbitration and Conciliation.—Of the above trade disputes, 45 (involving 58,898 persons (or 22 per cent. of the whole number of persons affected) were settled by arbitration or conciliation through the mediation of outside parties, compared with 42 disputes, involving 18,325 persons so settled in 1894. Of the above total, 28, involving 7,945 persons, were settled by arbitration, and 17, involving 50,953 persons, by conciliation. The latter figure includes 46,000 persons involved in the great boot and shoe dispute.

Eleven of the above 45 disputes were settled by permanent trade boards, and the remaining 34 (involving no fewer than 53,354 persons) through the agency of individuals.

The table on pages 64 and 65 shows particulars of the work accomplished during 1894 and 1895 by trade and district boards of conciliation and arbitration, not only in settling actual trade disputes but in determining questions which otherwise might have led to disputes. The table records the cases dealt with by 52 trade boards and four district boards, so far as reported. In 1895, 39 of the trade boards dealt with 1,255 cases of all kinds, of which 292 were withdrawn, referred back, or settled outside, and the remaining 963 were settled, viz., 805 by the boards and 158 by arbitrators or by the casting vote of the The number of cases settled in 1894 by the boards included in the table was larger, viz., 1,365, but it is to be remembered that during the greater part of 1895 most of the local arbitration boards in the boot and shoe trade were either suspended owing to the dispute in that trade or were restricted in function pending the revision of rules under the terms of settlement of the dispute agreed to at the Board of

Trade Conference. The four district boards (only two of which did any work during the year) dealt with five questions, of which they settled four, the same number as in 1894.

IV. Workmen's Organizations.

Trade Unions.—Information has been obtained with regard to 1,250 trade unions in existence in 1895, containing 1,330,104 members. The number of unions shows a very great increase compared with 1894, when it was only 822; but the difference is not due so much to an actual increase in the number of trade unions in existence as to the improved methods adopted for collecting particulars with regard to a large number of small unregistered societies. The membership of the 822 unions for 1894 was 1,256,448.

For comparative purposes 100 of the more important unions have been selected. Their membership in 1895 was 911,866, a falling-off compared with 923,896 in 1894. Their income (1,553,705l. compared with 1,624,332l.) also shows a falling off, but as expenditure was considerably below income, viz., 1,400,336l. (compared with 1,436,892l. in 1894) the funds in hand at the end of the year show an increase from 1,551,093l. in 1894 to 1,706,517l. in 1895.

Of all the unions making returns for 1895, 78 with 268,384 members belonged to the mining and quarrying industries. Next come the metal, engineering, and shipbuilding group with 219 unions and 243,069 members. Textile unions numbered 211, with 197,035 members, building trade unions 208, with 186,605 members.

Taking the 100 selected unions, grouped according to trades for comparison between 1895 and 1894, we find that there was a growth in the unions connected with the building, metal, furnishing, and printing groups of trades, but a falling off in those connected with mining, textile and clothing industries, transport and general labour. Thus the membership of the 13 mining unions selected for comparison was 202,226 in 1894 and only 196,499 in 1895; that of 14 principal textile unions fell from 92,850 in 1894 to 90,979 in 1895, and that of six clothing trade unions fell from 71,813 to 67,710. Fifteen unions connected with transport and general labour fell in membership from 151,672 to 144,012. On the other hand, the membership of 14 principal unions in the metal and shipbuilding group rose from 184,385 to 188,149; that of 15 building trade unions from 151,602 to 152,458; and of seven printing trade unions from 34,293 to 35,994.

The table on pp. 14 and 15 gives the provision made for old age by trade unions, showing that in 1894, 105 unions, with 444,995 members, paid 129,007l. in superannuation to 7,67,1 members. The average amount paid in superannuation perhead was 16l. 16s. The greater amount of the superannuation

benefit was paid by unions connected with the engineering, shipbuilding, and building trades.

Returns were received for 1895 with regard to 141 Trades Councils, embracing 3,323 unions and branches with (so far as stated) 661,826 members.

The Federations of Trade Unions known to the Department in 1895 numbered 108, with 1,151 unions or branches affiliated, containing 1,053,940 members.

Co-operation.—Though many particulars given in the Abstract with regard to workmen's co-operative societies refer to the year 1895, the complete figures for all classes of such societies (based on the Chief Registrar's figures) can only be stated up to the end of 1894. In that year, 1,589 societies made returns, with a membership of 1,245,958 persons or 3.2 per cent. of the population of the United Kingdom, compared with 1,564 societies and 1,199,106 members (3.1 per cent. of population) in 1893. The value of the total recorded sales (exclusive of transfers from productive to distributive departments of societies) was 47,147,230*l*. in 1894, compared with 47,086,233*l*. in 1893.

The sales of the 1,421 retail distributive societies, with 1,212,945 members, amounted to 32,242,394l in 1894, compared with 31,925,896l for the same number of societies in 1893, and their net profit, after allowing for interest on capital, and all trade charges and depreciation, to 4,460,110l, compared with 4,139,606l in the previous year. (Preliminary figures for 1895, obtained from a different source, give the number of societies as 1,439 with 1,302,723 members, and 34,140,768l sales.)

The production carried on by co-operative societies falls under four chief heads: (1.) That of societies established mainly for the purpose of production. (2.) That carried on as part of their business by the retail stores. (3.) That of the productive departments of the wholesale societies. (4.) That of the cornmilling societies, which for various reasons are most conveniently considered separately from other productive societies. Under each of these heads an increase is shown by the returns for 1895 compared with those for 1894. The 172 societies for production making returns, employed in 1895, 7,635 workpeople and sold goods to the value of 1,618,148*l.*, compared with 1,399,772*l.*, the value of goods sold by the 157 productive societies, employing 6,580 persons, which made returns for 1894.

The productions of the productive departments of retail stores transferred to the distributive departments in 1895 were valued at 2,374,275*l.*, so far as stated in the returns; but the large increase which this figure shows over that for 1894 (1,514,529*l.*) is largely accounted for by the greater completeness of the returns.

The value of the productions of the wholesale societies transferred to their distributive departments went up from 1,105,074l. to 1,570,598l., and the sales of corn-milling societies

from 939,685*l.* to 957,906*l.* The total number of persons employed by co-operative societies of all kinds in production was returned as 23,596 in 1895.

Sixty of the productive societies making returns devoted 9,839l., out of a profit of 50,209l., to their workers as a bonus on wages, of which 7,178l is accounted for by societies connected with the textile, boot and shoe, and baking trades.

Taking together the societies of all'classes by which production is carried on, we find that three-fourths of the total value (6,520,927*l*) of the productions sold or transferred to distributive departments is accounted for by four branches of trade, viz., baking, corn-milling, textile, and boot and shoe trades. The bulk of the baking (value 1,207,603*l*. out of 1,577,841*l*.) is carried on by retail stores, though a considerable number of independent baking societies exist in Scotland. The corn-milling is done by independent societies (957,906*l*.), wholesale societies (615,240*l*.), and retail stores (394,921*l*.). The textile manufactures are carried on mainly by independent societies (638,956*l*. out of 725,023*l*.), while the boot and shoe trade is divided among 24 independent productive societies (171,109*l*.), 241 retail stores (218,780*l*.), and the wholesale societies with productions of the value of 431,438*l*.

The sales of the distributive departments of the English Wholesale Society to its constituent stores show a rise from 9,443,938l. in 1894 to 10,141,917l. in 1895, while those of the Scottish Society show an increase from 3,056,583l. to 3,449,462l. The Irish Co-operative Agency Society shows sales amounting to 77,606l. in 1895 against 64,858l. in 1894.

The manufacturing departments of the English and Scottish wholesale societies show a considerable growth. In 1895 they produced goods to the value of 1,598,332*l.*, and expended 277,792*l.* in productive wages to 6,684 employees compared with productions valued at 1,130,616*l.* and 212,964*l.* wages paid to 5,196 employees in 1894.

Co-operative farming shows a slight increase in 1895 compared with 1894, both in acreage and capital.

Workmen's Clubs.—Turning to workmen's clubs we find from the returns obtained from clubs connected with the "Working Men's Club and Institute Union," that such clubs increased from 439 with a membership of 103,594 in 1894 to 467 with a membership of 115,307 in 1895. The total number of registered workmen's clubs, whether connected with the union or not, at the end of 1895 was 555, compared with 543 at the end of 1894.

Friendly Societies.—Though no statistics are as yet available with regard to all friendly societies in the United Kingdom in 1895, the tables on pp. 52-7 give particulars with regard to 10 of the principal friendly societies for each year from 1884 to 1895.

From these tables it appears that the 10 societies referred to included in 1895 an adult male membership in the United Kingdom of 2,210,476, compared with 2,188,006 in 1894, an

increase of 1 per cent.

Their total income, exclusive of female and juvenile funds, was 3,531,637l. compared with 3,398,464l. in 1894, and the total amount paid in benefits on account of male adults by nine of these societies which have given particulars for 1894 and 1895, was 2,346,974l. during 1895, compared with 2,098,552l. in the previous year.

The total accumulated funds of the ten societies and their branches at the end of 1895 (exclusive of female and juvenile funds for nine societies) was 17,049,303l. compared with

16,478,627*l*. a year before.

V. Industrial Accidents.

The table on page 143 summarises all the industrial accidents which are reported to any Government Department, including accidents to persons engaged in factories, workshops, mines and quarries, ships and fishing vessels, railway service, and in certain classes of constructive work.

In 1895, 4,493 workpeople were reported as killed by accidents, compared with 4,699 in 1894, showing a falling off. In 1894, quarrymen (102 deaths in 1895) were not included in the returns; but, on the other hand, the deaths at sea were considerably more numerous in 1894 than in 1895 (2,460 compared with 2,236). Fatal accidents to railway servants numbered 489 in 1895, compared with 522 in 1894. The number of factory and workshop operatives killed by accidents was 455 in 1895, compared with 448 in 1894; of coal miners 1,042, compared with 1,127; of metal miners 54, compared with 46.

During 1895 non-fatal accidents were reported injuring 27,421 workpeople belonging to the above-named classes, excluding seamen, for whom no returns of non-fatal accidents have been tabulated before the beginning of 1896. This total includes 575 quarrymen, for whom no returns existed in 1894. Omitting these for comparative purposes, we get 26,846 reported as injured in 1895, compared with 23,863 in the previous year.

Of the total, 10,011 were in factories and workshops (compared with 9,301 in 1894), 5,470 in and about mines (compared with 4,105), 7,480 among railway servants (compared with

7,229).

VI. Pauperism and Labour Bureaux.

Pauperism.—On the whole for the United Kingdom the mean number of paupers relieved in 1895 was about 255 per 10,000 of population, compared with 253 in 1894.

The table on p. 95 shows that the number of paupers relieved in England and Wales in 1895 was greater than in the

xxvi REPORT.

previous year. The total number relieved at the beginning of January 1895 was 817,431, and at the beginning of July 783,554, giving a mean of 800,493 compared with 785,880 for 1894.

The number relieved on January 1st, 1896, was 827,217, viz., 216,872 in-door and 610,345 out-door. Of these, 112,379 were adult able-bodied persons compared with 114,415 at the

beginning of 1895.

In Scotland the number of paupers is counted in the middle of January and September. In 1895 the total figure for January 14th was 96,671, and for September 14th, 96,225, giving a mean of 96,448 for 1895, compared with 94,173 for 1894. The number for January 1896 was 99,261.

The numbers of paupers relieved in Ireland at the beginning and middle of 1895 were 100,596 and 96,901, respectively, giving a mean figure of 98,749 compared with 100,330 for 1894. The mean number of adult able-bodied indoor paupers (including a few casuals) was 5,448 in 1895, and 5,770 in 1894.

It should be observed that a great temporary increase in pauperism, especially out-door, took place in February and March 1895, owing to the prolonged frost. This increase, which soon subsided, is not shown in the tables, owing to the dates on which the counting takes place. Some idea of the magnitude of the increase is afforded by the following figures for the 35 districts (mainly urban) for which returns for the middle of each month are published in the "Labour Gazette":—Number of paupers, December 1894, 335,634; January 1895, 352,637; February, 406,381; March, 386,401; April, 343,688; May, 328,189.

Labour Bureaux.—The returns from eight* labour bureaux show that the number of applicants for work on their registers during 1895 at the end of each month varied from 3,309 at the end of January to 1,764 at the end of June. About 86 per cent. of those on the register were men, 6 per cent. lads and boys, and 8 per cent. women and girls.

During the year, so far as known, 19,862 fresh applications for work were registered, 5,239 employers applied for work-people, and work, either permanent or temporary, was found

for 9,586 persons.

VII. Growth and Movement of Population.

In 1895 the estimated population of the British Islands was 39,124,496, viz., 30,394,078 in England and Wales, 4,155,654 in Scotland, and 4,574,764 in Ireland.

During the year, 1,154,427 persons were born, 735,017 died, and 279,208 were married in the United Kingdom, or 30, 19, and 7 per 1,000 of population respectively, compared with 29, 17, and 7 per 1,000 in 1894.

^{*} The returns from the Salvation Army bureau were for nine months only, and have been omitted from this summary.

The number of passengers of British and Irish origin who left the United Kingdom for places out of Europe in 1895 was 185,181, a considerable increase compared with the total (156,030) in 1894, but a decrease compared with 1893, when the total was 208,814.

The total number of emigrants, British and foreign, was 271,772 in 1895, compared with 226,827 in 1894.

If the outward and inward movement of British and Irish passengers caused by emigration to and immigration from countries outside Europe be balanced one against the other, the result is a net outflow of 75,763, almost exactly double the figure (37,721) for 1894, but considerably less than that for any other year within the period of 15 years included in the table.

The number of alien immigrants from Europe in 1895 was 23,762, exclusive of 9,894 seamen and of 44,637 aliens who landed in the United Kingdom, but were known to be en route for other countries. The corresponding figure for 1894 was 22,066, and for 1893, 23,599. It will be understood that these "immigrants" are not known to be immigrants for permanent settlement, but include passengers who either return to the Continent or proceed to other destinations.

Of the total, 10,033, or rather less than half, were Russians and Poles, compared with 7,246 in 1894.

Finally, the balance of the total passenger movement outwards and inwards, of all nationalities, to and from all countries, gives a net outflow from the United Kingdom of 67,595 persons, compared with 28,016 in 1894, and 93,299 in 1893.

VIII. Miscellaneous Statistics.

Profit Sharing.—Information has been received of the starting during the year ended 30th June 1896, of five new profit sharing schemes of British firms, and also of the existence of a scheme of this nature started in 1865, but no particulars as to which had been known to the Department, while three are reported to have ceased to exist. Thus the number of such schemes known to be in operation at the end of June 1896 was 101, compared with 98 at the end of June 1895. These firms employed an average of 29,069 persons, compared with 28,459 in 1894-5. The greatest number of schemes at the end of June 1896 in any one trade is in the printing trade (16 firms employing 3,274 persons). The trade, however, employing the greatest number of persons under the profit-sharing system is the engineering trade (4,747 persons, employed by 7 firms) followed by gasworks (2 firms, employing 4,369 persons). During 1895 the mean bonus on wages paid by all these businesses was 4.7 per cent., compared with 4 per cent. in 1894.

Industrial Prosecutions under Statutes affecting Labour.— During 1895 there were 596 prosecutions and 555 convictions under the Mines Regulation Acts, the total amount of fines and costs imposed being 664l. During the same year there were 3,038 convictions for breaches of the Factory and Workshop Acts, including 1,113 in the clothing trades, and 678 in the textile trades. Of the offences under the Factory and Workshop Acts, 2,153 related to illegal employment of protected persons, viz., the illegal employment of women (988), of young persons (1,008), and of children (157). No comparison can be made with 1894 in this case, owing to a change in the method of tabulating the statistics.

In 1895, 131 convictions, compared with 195 in 1894, were obtained for breaches of the Merchant Shipping Acts, resulting in the imposition of penalties amounting, with costs, to 835l. 4s. 0d., compared with 2,172l. 17s. 4d. in the previous

year.

As stated on a previous page, the above account is for the most part limited to the statistics of the year 1895. Many of the tables in the Abstract dealing with wages relate to the Census of Wages (1886-91), while those dealing with standard rates refer to the present year, 1896. The tables dealing with the occupations of the people being based on the Census returns of 1891 remain the same as in last year's report. These, and other sections of the Abstract, however, sufficiently explain themselves without an introduction.

I am, &c.
H. LLEWELLYN SMITH,
Commissioner for Labour.

^{*} In the case of the English Co-operative Wholesale Society no bonus on wages is paid to

workers.

1 Including interest on capital, depreciation of property, and expenses of management, &c.

2 "Making up" only for the distributive departments.

3 Previous to 1887 the amount of bonus to workers in the manufacturing departments was not shown separately from that paid to distributive employees.

SCOTTISH CO-OPERATIVE WHOLESALE SOCIETY.-MANUFACTURING DEPARTMENTS.

(b.) DETAILED STATEMENT, CLASSIFIED BY INDUSTRIES.

TABLE 23 .- STATEMENT showing, for each of the Years 1894 and 1895, the Number of Workpeople employed, Amount of Capital, Value of PRODUCTIONS and AMOUNT of Expenses of the MANUFACTURING DEPART-MENTS of the Scottish Co-operative Wholesale Society.

^{*} The numbers given in the table include persons employed in and about fireclay, stratified ironstone and shale mines. Such mines are included under the Coal Mines Act, and the numbers employed in them are not shown separately.

[†] Staffordshire, Nottinghamshire, Leicestershire, Worcestershire, Shropshire, Derbyshire, and Warwickshire.

¹ Not separately stated.

⁵ Up to and including 1892 the figures given in the table are exclusive of persons employed on private branch railways and tramways, and in washing and coking coal on premises adjacent to or belonging to the mines. For 1893, 1894, and 1895 these persons are included, but the number is not shown separately in the reports. In 1891 and 1892, however, the total number of such persons was 19,533 and 19,342 respectively.

^{*} No particulars given.
† Including 8,800 tons obtained from quarries under the Quarries Act of 1894.
‡ Including a large quantity of ordinary brick clay returned under the Quarries Act, which Act only came into operation in 1895.
§ The difference between the figures for 1895 and those for previous years is mainly accounted for by more complete returns from quarries in 1895, a result due to the passing of the Quarries Act.

PRODUCTION OF COAL.

COAL AND IRON TRADES.—MISCELLANEOUS TABLES.

ASCERTAINED PRICES OF COAL AND IRON.

Table 52.—Statement showing the mean ascertained Selling Price per Ton of Coal or Iron in the under-mentioned Districts for each Year from 1880 to 1895 inclusive.

[The prices given below are the mean for each year of the realised prices as ascertained periodically from an examination of certain employers' books by accountants appointed by the employers and workpeople concerned. The ascertained prices are largely used in regulating changes of wages under Sliding Scales, &c.]

	Co	al.	Pig Iron.	Manufactured	Iron and Steel.
Year.	North- umberland (Average for all classes of Coal per Ton at Pit's Mouth).	South Wales and Monmouth (Average for certain classes of Coal per Ton, f.o.b.).	Cleveland (Average per Ton of No. 3 Cleveland Pig Iron).	North of England (Average Selling Price of Rails, Plates, Bars, and Angles per Ton).	Midlands, South Yorkshire, and South Lanca- shire (Average Selling Price of Bars, Hoops, Sheets, Plates, and Strips per Ton).

^{||} No returns were received in 1894 for the St. Martin's and Salvation Army Labour Bureaux.

"No return was received for this month.

"The Labour Bureaux at Plymouth was closed for one week during August, and the return of work is consequently for three weeks only.

† Of this number, 1,000 were employed by the Distress Committee and 180 by the Corporation.

[•] Workpeople affected in the iron mining, pig-iron and iron and steel industries in Cleveland are included in the northern counties. The 1893 figures include in addition, the effect of the changes in workpeople's waxes in the shipbuilding industry in Middlesbrough.
† Includes the workpeople employed at Deptford and Pembroke, who are included in the general total for the Home Dockyards and Victualling yards.
† This advance in rates of wares was accompanied by a reduction in hours of labour, with the result that weekly earnings remained unchanged.

CHANGES IN HOURS OF LABOUR IN 1894.

[†] The amounts given for 1893 for the building trades differ from those published in the previous report, owing to an alteration in the method of computing. Changes in the hourly rate of wages are sometimes accompanied by changes in hours of labour; and in the present statement such changes in hours have been taken into account in estimating the effect of the changes on weekly wages.

CHANGES IN RATES OF WAGES IN 1894-NET EFFECT ON WEEKLY RATES—continued.

TABLE 67 .- STATEMENT showing for each of the Under-Mentioned Occupations the TOTAL NUMBER OF SEPARATE INDIVIDUALS following those Occupations whose RATES OF WAGES were CHANGED during 1894, so far as full particulars have been obtained, and the TOTAL AMOUNT and AVERAGE AMOUNT per HEAD of such CHANGES, distinguishing NET INCREASES from NET DECREASES; together with the corresponding Totals for each Group of Trades in 1893—continued.

[§] Recognised by the Hull and District Operative Painters' Society.

|| The wages of ironfounders and engineers at Manchester will be increased 1s. per week from 1st January 1897.

¶ These wages and hours of labour are recognised by the Amalgamated Society of Engineers.

* The hours given are those of the old agreement, which expired on 1st May 1895. During the present winter some of the painters are continuing to work these hours, while others are conforming to the land of the land

^{*} Rates were also returned for a few men employed as mantle cutters at an average wage of

^{**}Rates were also returned for a few men employed as mainte cutters at an average wage of 48.6.4, per week.

† The returns also included a number of unpaid girls (apprentices and improvers). These numbered 42.6 per cent. of the total number of girls returned under "Dressmaking," 47.0 per cent. under "Millinery," and 14.3 per cent. under "Mantle-making." Very few of these girls had board or lodging provided by employers, and about one-sixth of them paid their employers amail nerminums. small premiums.

18959	r -	-	481	24	455	8,281	1,780	10,011	8,662	1,804	10,466

Note.—From a Parliamentary Paper (No. 402 of 1890) it appears that the number of persons actually at work in factories when the returns were furnished to the Home Office was 3,270,835, but there are no figures available as to the number of persons employed in workshops, although the number is very large.

^{*} Up to and including 1894, the twelve months covered by each report ended on 31st October; in 1895 the period is from January to December.

[†] In 1891 the total number of factories registered was 67,991, of workshops 77,963.

[†] In 1892 § In 1893 || In 1894 71,851. 99 99 ,, 74,059, of workshops 86,915. 39 39 27 ,, 77,712, 92,141. 99 ¶ In 1895 79,110, 105,116.

Note.—As this Act only came into operation on July 20th, 1894, and was probably imperfectly known in 1895, the number of accidents reported to the Board of Trade is doubtless below the total number which have occurred in all works included in its provisions during that year.

^{*} Section 6 of the Act states that "Nothing in this Act shall apply to any employment which "is for the time being regulated by any Act of Parliament administered by the Secretary of "State, or by inspectors appointed by him, or shall require notice to be given of any accident "of which notice is required by any other Act to be given to the Board of Trade," † The Factory and Workshop Act, 1895, provides that accidents occurring in these employments on and after the 1st January 1896, shall be reported to the Inspector of Factories for the District (and in certain cases also to the Certifying Surgeon) instead of to the Board of Trade. † Authorised by any local or personal Act of Parliament. § On buildings more than 30 feet high by means of scaffolding. If In buildings more than 30 feet high in which more than 20 persons, not being domestic servants are employed for wages.

servants, are employed for wages,

INDUSTRIAL ACTIONS AND PROSECUTIONS.

UNDER THE EMPLOYERS LIABILITY ACT.

Table 92.—Summary of Actions tried in England and Wales during each of the Years 1881 to 1894.

[Compiled from Home Office Returns.—Parliamentary Papers Nos. 151 of 1884, 320 of 1885, 226 of 1886, 290 of 1888, 357 of 1892, and 301 of 1895.]

Note.—The definition of a Room, for the purposes of the Scotch and English Censuses respectively, not being identical, the above table cannot be compared accurately with the corresponding table for England on p. 164. For the same reason no table for overcrowded tenements can be given for Scotland, the definition of such tenements given in a footnote on p. 165 not being applicable to Scotland.

of such tenements given in a footnote on p. 165 not being applicable to Scotland.

* For the purposes of this table families consisting of from 1 to 15 persons only are included, as the original figures do not show the exact number of persons in larger families. In the whole of Scotland the number of separate families of more than 15 persons was 1,650, with 78,305 persons, making (with vagrants and persons on board training ships and shipping belonging to the Royal Navy or merchant service which have also been excluded from the Table) a grand total of 876,089 families, with 4,025,647 persons.

⁺ Comprising all towns with a population of 2,000 and upwards.

IRELAND.

Classification of Houses.
