About the Office for National Statistics

The Office for National Statistics (ONS) is the government Agency responsible for compiling, analysing and disseminating many of the United Kingdom's economic, social and demo-graphic statistics, including the retail prices index, trade figures and labour market data, as well as the periodic census of the population and health statistics. The Director of ONS is also the National Statistician and the Registrar General for England and Wales, and the agency administers the statutory registration of births, marriages and deaths there.

A National Statistics publication

National Statistics are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.

Introduction

UK Economic Accounts – the quarterly national accounts publication brings together recently published data on national and financial accounts and the balance of payments for the United Kingdom. UK Economic Accounts replaces the articles on the National Accounts and Balance of Payments previously included *in Economic Trends*. It contains two articles incorporating text, charts and tables.

Concepts, Sources and Methods

With effect from 24 September 1998 the UK national accounts were converted onto the European System of Accounts 1995 (ESA95). This change results in a number of changes to the terminology and methodology used in presenting and compiling the accounts. A short description of the national accounts is given in the introduction to the 2001 edition of *United Kingdom National Accounts,* the National Statistics *Blue Book*. More detailed information is available in *United Kingdom National Accounts: Concepts, Sources and Methods* (TSO 1998) and an overview of the move to ESA95 is available in *Introducing the ESA95 in the UK* (TSO 1998). Details of the balance of payments accounts are given in the 2001 edition of the Pink Book. Further information on the financial accounts is in the *Financial Statistics* and the *Financial Statistics Explanatory Handbook*.

Key Economic Developments: *The third quarter of 2002*
This article brings together a range of economic statistics on the last quarter and highlights key developments in the economy as well as providing analysis of the sector and financial accounts.

UK Economic Accounts: *The third quarter of 2002*
This article presents annual and quarterly estimates of national accounts providing a breakdown of the components of GDP and the Balance of Payments.

Appendix tables

The tables in the Appendix give series of quarterly figures and quarterly and annual growth rates. The data in these tables can be obtained in computer readable form via On-line Services Branch. For details see box below.

Notes on the tables

1 Most quarterly data are available seasonally adjusted: those not seasonally adjusted are indicated.

2. Rounding may lead to inconsistencies between the sum of constituent parts and the total in some tables.

3. "Billion" denotes one thousand million.

4. There is no single correct definition of money. Consequently, several definitions of money stocks are used:

   M0 the narrowest measure consists of notes and coins on circulation outside the Bank of England and bankers' operational deposits at the Bank.

   M2 comprises notes and coin in circulation with the public plus sterling retail deposits held by the UK private sector with UK banks and building societies.

   M4 comprises notes and coin in circulation with the public, together with all sterling deposits (including certificates of deposit) held with UK banks and building societies by the rest of the private sector.

5. **DM** - Deutschmark

6. **ERM** - Exchange Rate Mechanism

7. **ERI** - Exchange Rate Index

8. Symbols used:
   - .. not available
   - - nil or less than half the final digit shown

UK Economic Accounts on the Internet

Time Series Data

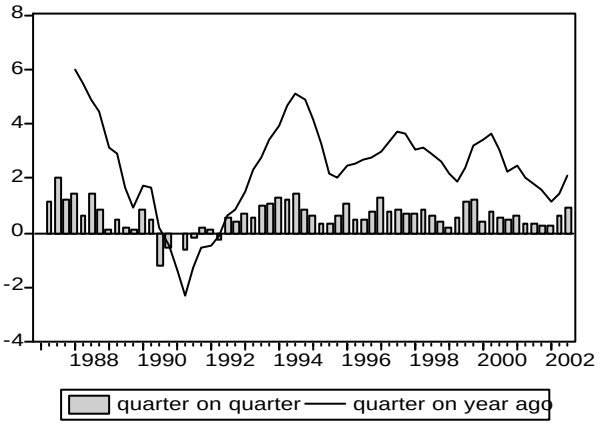
Access to around 40,000 time series, cross sectional data and metadata from across the Government Statistical Service (GSS), organised by theme and subject. Download many datasets, in whole or in part, or consult directory information for all GSS statistical resources, including censuses, surveys, periodicals and enquiry services. Information is posted as PDF electronic documents, or in XLS and CSV formats, compatible with most spreadsheet packages.

KEY ECONOMIC DEVELOPMENTS: THE THIRD QUARTER OF 2002

National Accounts data overview

Quarterly GDP growth in the third quarter of 2002 was 0.9 per cent, up from 0.6 per cent in the second quarter. Quarterly growth in the third quarter was the highest since 1999 (see chart 1), however it was affected by the Jubilee. The Jubilee, and the holidays associated with it, appears to have reduced output and growth in the second quarter and raised them in quarter three. The annual rate of growth in quarter three, at 2.1 per cent, is the highest since 2001 quarter one.

Chart 1
Gross domestic product
Growth



The stronger UK performance in the third quarter comes alongside a weak recovery in the main industrial economies during 2002. Growth continued in all the main industrial economies, but the sources of growth were mixed, with exports driving growth in Germany, while household consumption was the driver in France, USA and Japan. In all major economies investment demand is still in decline. Set against output, in most economies unemployment is at best broadly flat or inching up in some economies, employment growth is weakening.

Despite a slight rise in second quarter investment in the UK, the renewed fall in the third quarter means that the sharp decline in investment that was the primary cause of weakness in 2001 has not yet been reversed. Exports and imports both fell in the third quarter for the first time this year, in exports this marks a fall back from the strong growth of the second quarter. Other expenditure components of UK GDP show robust household demand in the second quarter, and while quarterly growth in Government demand remained low, growth remains strong compared with a year ago.

From the output perspective the increase in quarterly growth partly reflects the continuing service sector pick up following a particularly weak first quarter and the first increase in manufacturing output since 2000. The increase in manufacturing output offset a decrease of 6.0 per cent in production for the mining sector and the reduction in growth to 1.8 per cent in the electricity sector after the increases of 4.9 and 3.9 per cent respectively in the second quarter. However, both sectors are affected by the Jubilee.

Turning to the sectoral presentation. In the last two quarters the UK corporate sector has seen a return to net lending following a period of net borrowing that started in 1997. Those companies that are borrowing are relying increasingly on corporate bonds rather than other sources of finance. According to balance sheet data the level of indebtedness remains high. The strength in household consumption growth saw a continuation of the household net borrowing that resumed in the second quarter. Indebtedness as a share of income continues to accelerate and the value of household assets has fallen sharply, although interest payments as a share of income remain low. Over recent quarters the Government sector has returned to net borrowing as tax revenues have slowed and expenditure has risen strongly. For the UK as a whole the current account remains in deficit in 2002, underpinned by a deficit on trade in goods, although offset to some extent by continuing surpluses in trade in services and investment income. The international investment position worsens as re-valuations to assets and liabilities work against the UK's for the first time this year.

Markets and monetary developments

The Bank of England's Monetary Policy Committee (MPC) held Bank Repo rate at four per cent throughout the third quarter of 2002. Rates were held low to compensate for weak external and investment growth. Specific concerns were articulated over house price inflation, the volatility of financial markets, imbalances in the United States and the increasingly revealed weakness in the Euro area.

In the third quarter of 2002 the potentially weakening outlook on the global economy was reflected or even led in the markets, with the FTSE all-share index declining again. The index fell by 18.0 per cent in the third quarter of 2002, after a fall of 2.4 per cent in quarter two, this is the largest quarterly fall since 1987 (see chart 2). Similarly the overall decline since the peak in the third quarter of 2000 represents the largest fall in stock market valuations since the first half of the 1970s.

In the third quarter exchange rates continued to move in the same directions as in the previous quarter, which was against the recent pattern. Sterling rose against the dollar, but fell against the Euro and the Yen. All movements in the opposite direction to the main movements over the past few years (chart 3).

Chart 2
FTSE All-Share index, quarterly average

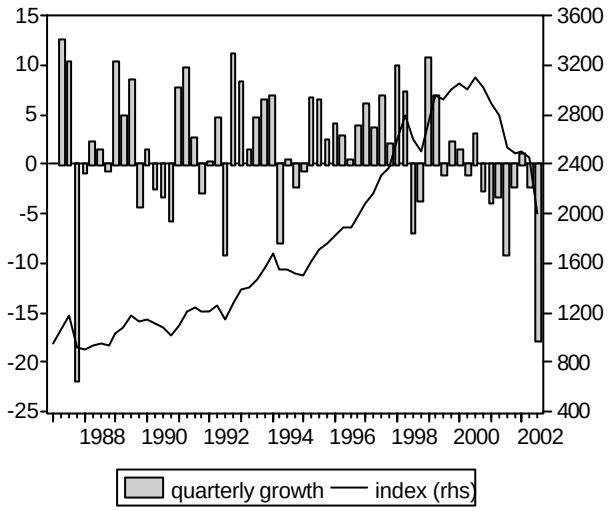


Chart 3
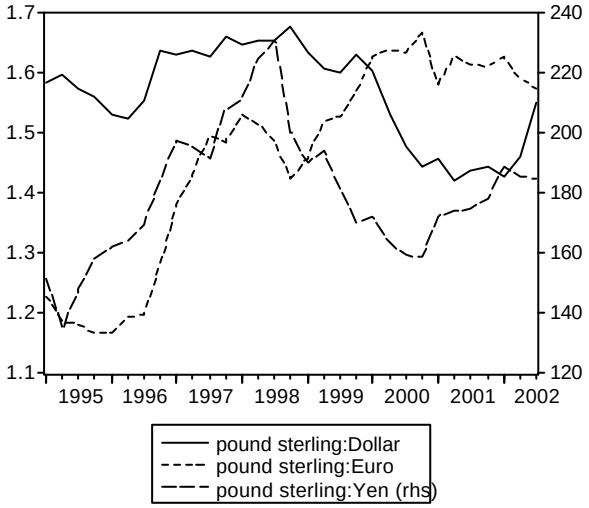
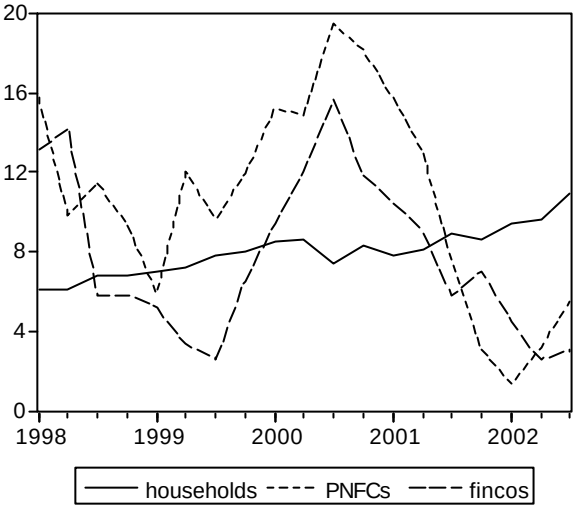
Sterling exchange rates
£1=



Despite the small fall in narrow money growth in the latest quarter, narrow money has continued to grow at an increasing annual rate, whereas broad money growth has decelerated. Broad money growth (M4, notes and coins and deposits) fell to 5.7 per cent in quarter three 2002, from 5.9 per cent in the previous quarter. Narrow money growth (M0, notes and coins) fell from 8.9 per cent in quarter two to 8.4 per cent in quarter three 2002, although this still above that of any other quarter since 2001 quarter one.

Bank and building society lending figures, so-called M4 lending, show an increase in lending to all sectors of the economy in the latest two quarters. Since quarter three 2000, lending has remained robust to the household sector only and lending to this sector continues to have the strongest annual growth at 10.9 per cent in the third quarter of 2002. Recently lending to both the financial and non-financial corporate sector has risen, although weak figures at the end of 2001 and start of 2002 mean that annual growth rates are low. In quarter three 2002, annual growth rates of lending to financial (fincos) and private non-financial corporations (PNFCs) has fallen to 5.5 and 3.0 per cent respectively, from peaks of 19.4 per cent and 15.6 per cent in quarter three 2000 (chart 4).

Chart 4
M4 lending
growth, quarter on year ago



The lending data mirrors the situation on the expenditure side, where total demand in the UK economy has mainly been maintained by the household demand.

The labour market

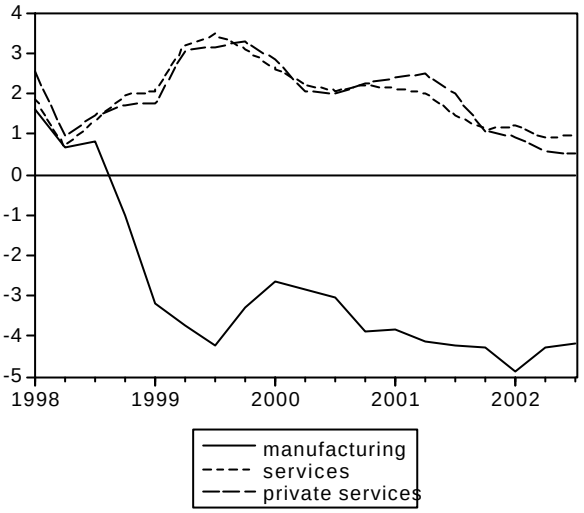
Overall the labour market should probably still be considered as flat or perhaps gently declining.

ILO unemployment was 5.3 per cent in quarter three 2002, up from 5.1 per cent in quarters one and two, and the Labour Force Survey employment rate fell to 74.3 per cent in quarter three 2002, from 74.5 per cent in the previous quarter. On the other hand the claimant count rate fell back to 3.1 following 3.2 per cent in quarter two, reversing the first increase since 1993.

In terms of growth rates, in the third quarter the count of LFS employment fell by 0.1 per cent compared with the previous quarter, 0.6 per cent compared with the same quarter in 2001. The employer-based survey of employment on the other hand shows a second consecutive decline of 0.1 per cent on the quarter, and 0.1 per cent growth on the year.

An industrial analysis growth in workforce jobs also emphasises the recent importance of public sector job creation. Chart 5 shows manufacturing employment continuing to fall (4.2 per cent decline in year to quarter two), and private sector services employment growing only slowly (0.5 per cent), while public sector employment continues to accelerate (2.1 per cent).

Chart 5
Employment
growth, quarter on year ago

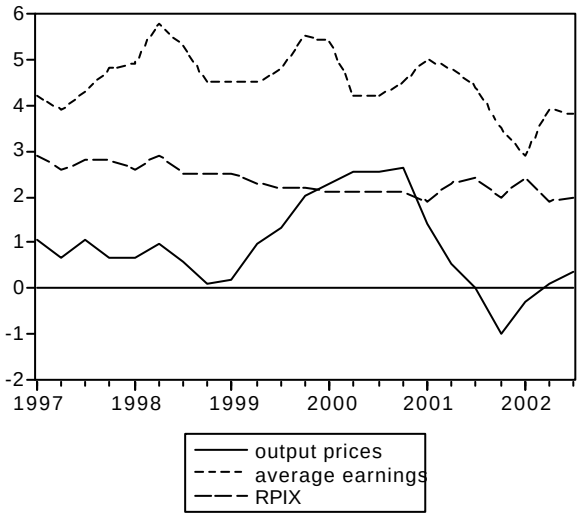


Earnings and prices

Overall in the second quarter, price pressures continued to remain subdued, with deflation seen in producer prices, consumer prices again at a historic low and earnings pressures fairly stable.

RPIX inflation rose slightly to 2.0 per cent in quarter three 2002, still some way below the target of 2.5 per cent, which has been the case since 1998 (chart 6).

Chart 6
Prices and earnings
Growth, quarter on same quarter a year ago



In the third quarter of 2002, output prices rose by 0.4 per cent annually, continuing the slight pick up that started in the second quarter. These quarters follow deflation in 2001 quarter four and 2002 quarter one, which were the first quarters of deflation on an annual basis since the series was started in 1974. Input prices showed an annual fall of 2.4 per cent in the third quarter, the smallest fall since input deflation began in the third quarter of 2001. It should also be noted that some of these movements have been exaggerated by falls to fuel prices.

Perhaps in parallel with the weakening labour market, average earnings growth has continued to remain subdued. The third quarter saw earnings growth at 3.8 per cent, as measured by the headline rate, similar to the second quarter, which was 3.9 per cent, down on growth of 4.4 per cent a year ago. For the first time since early 2001 bonuses have not had a negative effect on earnings growth. Latest headline figures remain comfortably below the growth of 4.5 per cent that the Bank of England regards as consistent with their inflation target.

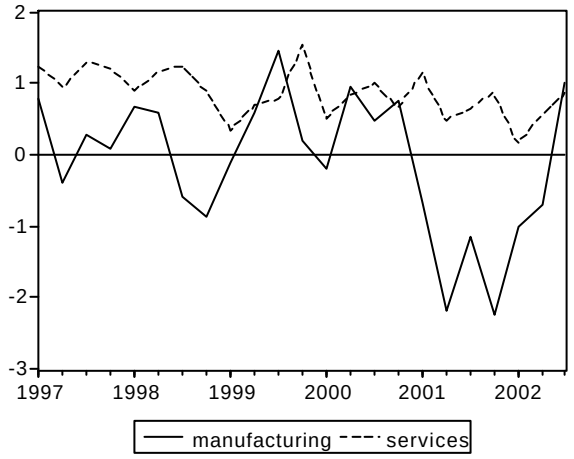
OUTPUT AND SECTORAL ANALYSIS

GDP output data

Gross domestic product (GDP) in the third quarter of 2002 shows quarterly growth of 0.9 per cent, following growth of 0.6 per cent in the second quarter of 2002. Growth comparing the third quarter of 2002 with the same quarter a year ago was 2.1 per cent, up from 1.5 per cent in the year to the second quarter of 2002. This marks a pick up in annual growth from quarter one 2001, which was the lowest figure since the economy emerged from the 1990-91 recession.

The sources of the increase in growth are primarily the manufacturing and service sectors, with the other sectors showing lower growth than in the second quarter.

Chart 7
Output
Growth, quarter on previous quarter



In the third quarter of 2002 manufacturing output grew by 1.0 per cent compared with the previous quarter, up from a fall of 0.7 per cent in the second quarter. This is the first increase in manufacturing output since 2000 (chart 7). However manufacturing was particularly affected by the Jubilee, with output falling by 5.4 per cent in June and then rising by 4.8 per cent in July. The monthly path within the third quarter shows a degree of decline towards the end of the quarter. The annual rate of decline, 2.9 per cent, is below recent annual rates of decline, which were

above 5.0 per cent and echoed those last seen in the 1991 recession.

The Jubilee has had a significant effect on both the level of production and the time path of that production in the manufacturing sector. In general, in the year to the third quarter, most sectors of manufacturing have shown declines in output, which have been partly offset by ongoing robust increases in motor vehicle production, which grew by 7.4 per cent over the same period.

Service sector quarterly growth was 0.9 per cent in the third quarter of 2002, following growth of 0.6 per cent in the second quarter (figure 3 again). The Jubilee seems to have had a lesser, but still significant, effect on services than on manufacturing. Comparing with the same quarter a year ago, annual growth was 2.5 per cent, up from 2.2 per cent in quarter two, and some way below the growth of 3.3 per cent recorded in 2001 as a whole.

Robust construction output growth continues to support overall GDP growth, figures show growth of 7.8 per cent in the year to 2002 quarter three, the highest growth since 1988. On the other hand, the strong production growth in the mining and quarrying industries and electricity gas and water supply industries in the second quarter has not been sustained, with output of the mining and quarrying sector falling sharply by 6.0 per cent in quarter three.

The household sector

Quarterly growth in household final consumption was 0.8 per cent in the third quarter of 2002, down from growth of 1.2 per cent in the second quarter. Growth compared with the same quarter a year ago was 3.8 per cent. This ongoing robust demand was echoed by other indicators of household demand. Annual growth in retail sales was 4.9 per cent in quarter three 2002, and whilst this was below rates of over six per cent in 2001, these are still high compared to other years. Gross consumer credit continued to grow robustly with year-on-year quarterly growth of 12 per cent in the third quarter of 2002, continuing the trend of slight falls in growth from quarter four 2001, which at 14.1 per cent was the highest rate since 1998. On the other hand, while confidence measures remained more upbeat, external indices of retailing showed a degree of weakening since the first quarter.

In the medium term the strength of consumer demand relative to total available household resources led to the sector becoming a net borrower in 1999 and 2000. The most important factor contributing to the lesser increase in resources has been a large increase in collected taxes on income, which grew by 39 per cent between 1997 and 2000. This increase has been dominated by increased collected taxes due to the introduction of the self-assessment system, although the effect was exaggerated due to almost static figures for taxes collected between 1995 and 1997.

In 2001 there was a return to net lending, as income from various sources increased. From the second quarter of 2002 there has been a return to net borrowing of £1.3 billion in the second quarter and £0.4 billion in the third. This return to net borrowing was due to lower dividend revenues and property income, and higher net interest payments, set against still high consumption.

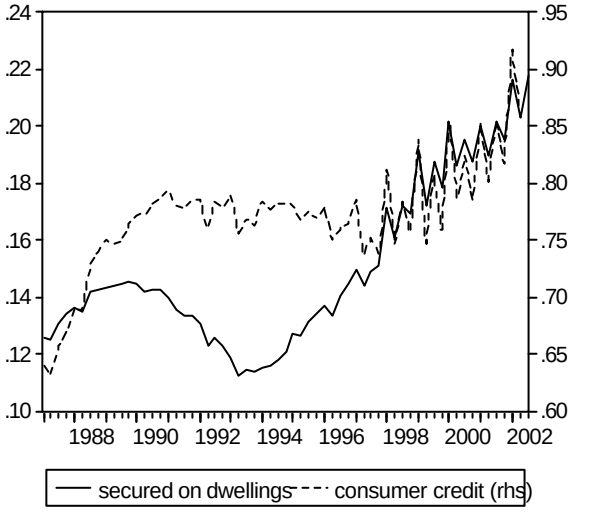
The household position according to the saving ratio has shown a significant change since early 2000, when rates were around 3.6 per cent. At the start of 2001 the savings ratio rose to over 6 per cent and since then, with the exception of 2002 quarter two, has been close to the third quarter level of 5.6 per cent.

The financial account shows that the general movement from net lending to borrowing since 1992 has primarily been facilitated by increases to both secured and unsecured loans. This continues a trend in borrowing that has been underway for a long time. Bank of England data on stocks of household debt outstanding to banks and building societies shows household debt at unprecedented levels relative to disposable income. Chart 8 shows that as a share of quarterly gross disposable income (GDI), household borrowing secured on dwellings and on credit are both at levels not seen since at least 1987; with debt on credit as a share of GDI having almost doubled since 1994.

Chart 8

Household debt

stock outstanding relative as % gross disposable income



While overall debt to banks and building societies has increased sharply, the overall financial wealth of the household sector also increased throughout the 1990s (chart 9). However, since quarter three 2000 the previous rapid growth in the value of equity and life assurance reserves held as assets went into reverse, with the decline in 2002 being particularly steep. Net financial assets were measured at £1536 billion in the third quarter of 2002, down fairly substantially from both the figure of £2025 billion in the first quarter of 2002 and from the peak of £2459 billion recorded in 2000 quarter three.

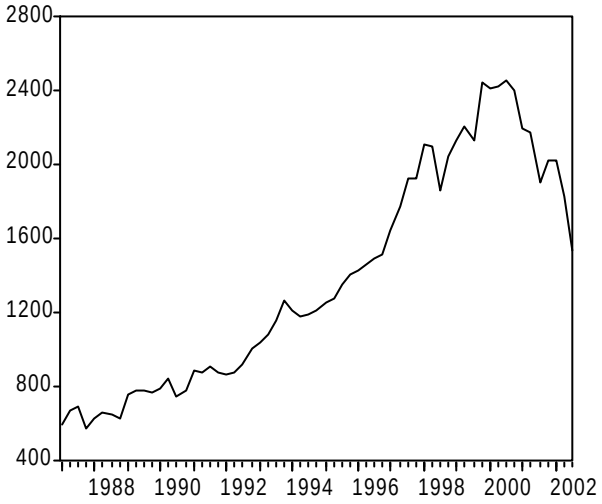
Overall though, households appear to be continuing to shrug off declines in wealth and support their high spending by taking on increasing levels of debt from

banks and building societies.

Chart 9

Household net financial assets

£ billion



Private non-financial companies

The income and capital account shows that 2002 has seen cutbacks in investment set against some recovery to profits and a return to net lending. PNFC's annual investment expenditure growth was negative for the fourth consecutive quarter. It fell by 7.7 per cent in the third quarter of 2002 compared to the same quarter a year ago, after a falls of 11.4 and 8.6 per cent in quarters one and two respectively. Whilst investment is significantly down on a year ago quarterly figures show that most of the fall occurred at the end of 2001 and the start of 2002. Dis-aggregated business investment figures show that falls in investment, relative to a year ago, are primarily due to the cut backs in 'other machinery and equipment', offset by stable investment in transport equipment and other buildings and growth in investment in dwellings.

Total net lending was £3.2 billion in the third quarter, the same as in the second quarter. This follows net borrowing in 2001. The switch to a net lending position in 2002 is accompanied by an improvement in profits and a reduction in investment compared with the same period a year ago. Overall, the sector had been in a position of net borrowing since 1997 when it was £3.5 billion, peaking at £13.0 billion in 1999. Borrowing recovered to £3.7 billion in 2000 but the sector fell back into a more substantial deficit of £7.8 billion in 2001, whilst so far this year net lending has been £7.8 billion.

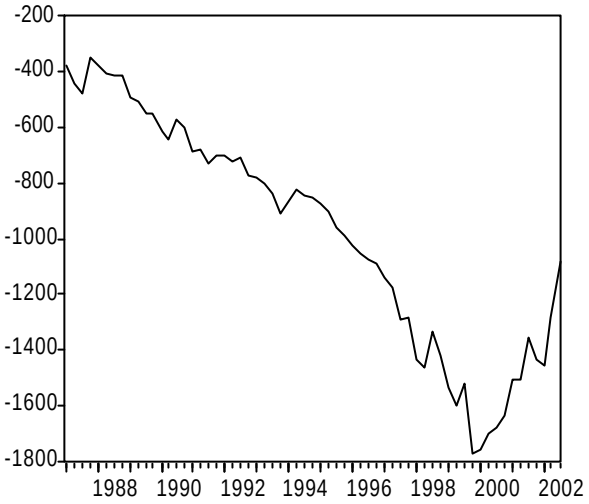
The financial account shows activity has picked up very strongly after the slightly subdued first half of the year. The main source of this new activity is the very large outward direct investment loans affecting both assets and liabilities in quarter three. The other sources of the increased activity are greater purchases of UK shares and continued purchases of rest of world shares. Liabilities have also seen increased growth in MMIs.

The PNFC sector has now been underpinned by a large stock of debt for some time. The financial balance sheet shows the sector having net liabilities of £1,079 billion in quarter three 2002 (chart 10). The latest estimates of this deficit are however a substantial improvement on the estimate in 2000 and this follows from lower valuations on UK shares held as liabilities.On the other hand, debt liabilities (i.e. non-equity and measured as a share of GDP) are at an all time high.

Chart 10

PNFC net financial assets

£ billion



Government

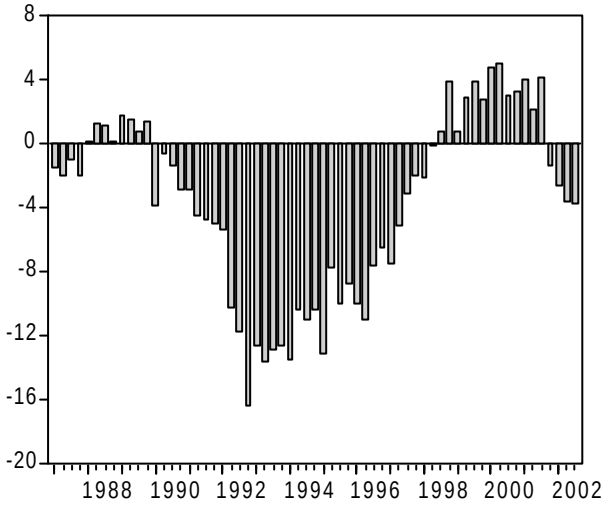
Constant price government final consumption expenditure, which is in part estimated by valuing output as opposed to deflating current consumption, grew by 5.4 per cent in quarter three 2002 compared with the same period a year ago. Current government final consumption expenditure, in contrast, grew by 10.3 per cent in the year to quarter two 2002. The large difference partly follows from the fact that there is likely to be a time lag between, as well as a non-necessary equivalent impact of, expenditure on inputs and resulting outputs. That said, overall there has been a strong increase in government activity since the beginning of 2001, coinciding with the slowdown in private sector activity.

Following a period of robust government finances, the recent acceleration in government expenditure has been set alongside weaker revenues reflecting the more subdued economic activity. As a consequence in the third quarter of 2002, central government saw seasonally adjusted net borrowing of £3.8 billion, following net borrowing of £3.6 billion in the previous quarter (chart 11). This is the largest central government net borrowing since 1997. Very broadly, the financial account suggests that this return to net borrowing over the past four quarters has been financed by issue of Treasury bills offset to some degree by a reduction in government security liabilities.

As a result of the previous prolonged surplus on the income and capital account, the Governments' balance

sheet showed diminishing net liabilities from the end of 1998 to the first quarter of 2002. The last two quarters have seen net financial liabilities rise to £277 billion, a similar level to that of 2000.

Chart 11
Central Government net lending
£ billion



Financial corporations

Latest data shows that the financial corporation sector has been a net borrower from other sectors of the economy since 1996, with net borrowing steadily increasing until peaking in 2000 at £21.4 billion. From a quarterly perspective, net borrowing declined during 2001 and has remained broadly stable so far in 2002, standing at £1.6 billion in the third quarter (chart 12).

The increase in net borrowing since 1996 was largely caused by a combination of sharply deteriorating gross trading profits and increasing investment. Gross trading profits fell to minus £30.2 billion in 2001 from minus £11.1 billion in 1996, while investment increased from a low of £4.2 billion in 1993 to a high of £11.6 billion in 2000. While these time periods do not exactly overlap, they indicate the broad trends that have been at work. It is important to note the nature of financial corporations' activity, much of their income comes from the margins between interest receipts and payments on lending activity, as a consequence their gross trading profits are negative reflecting primarily the costs faced by the industry.

The sharp decline in gross trading profits between 1999 and 2001 was driven by increased staffing costs including high bonus payments in the banking and other financial institutions (mainly securities dealers), higher than anticipated costs in the insurance industry (mainly due to bad weather) and increased marketing expenses for securities dealers. The recovery in recent quarters has been due to some recovery in gross trading profits and also improvements to net dividend revenues.

Financial account data, which dis-aggregates the borrowing between the different types of financial institution, reveals that the main deterioration in net borrowing was driven by a variety of sectors. The banking sector had very high net lending in 1999 that subsequently fell back to lower levels, at the same time as 'insurance and pension funds' became significant net borrowers. 'Other financial intermediaries' borrowed large amounts from 1993, particularly in 1998, before suddenly switching to massive lending in 2001. The 2002 figures show a switch to net borrowing in the banking sector, lower net borrowing by 'insurance and pension funds' and a return to net lending by 'other financial intermediaries' in the third quarter after significant borrowing in the previous two quarters.

Chart 12
Financial corporations net lending/borrowing
£ billion

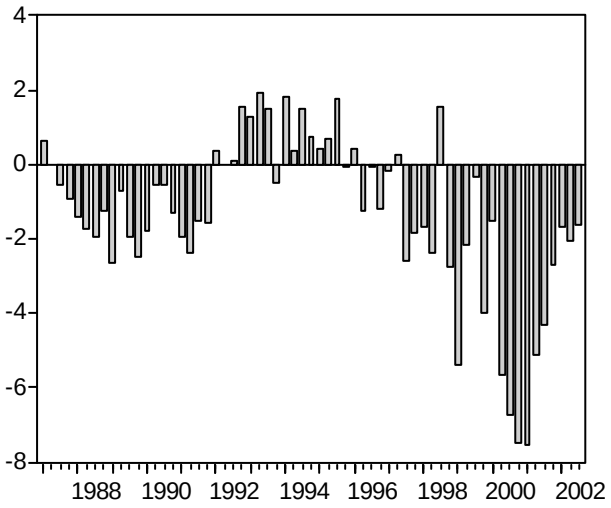


Chart 13
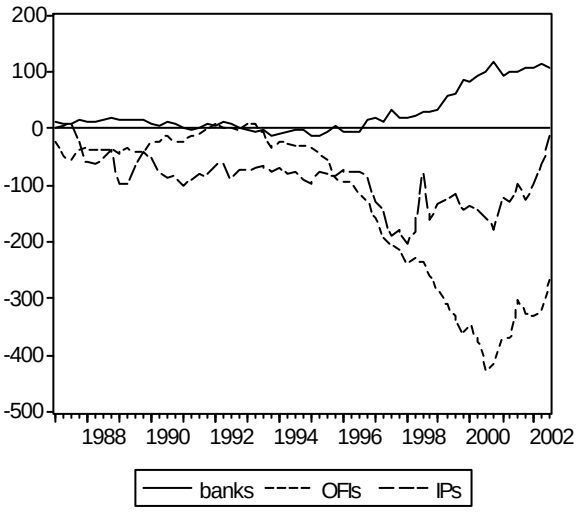
Fincos net assets/liabilities
£ billions

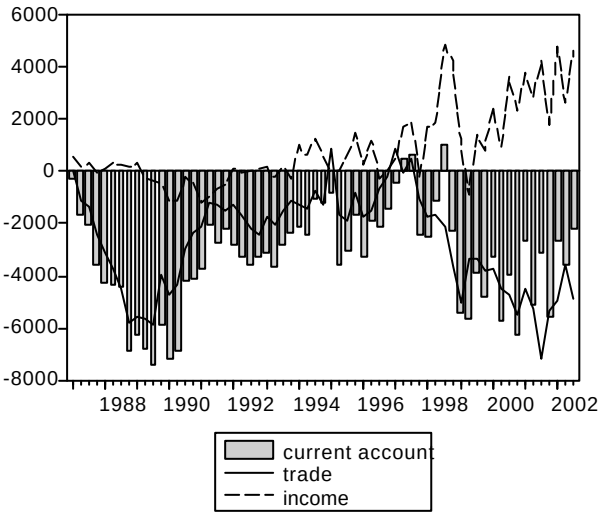


Looking at the overall net stock position on the balance sheet, net financial liabilities of the financial sector recovered in 2001 to £339 billion, after a prolonged deterioration that peaked at £469 billion in 2000. This recovery comes as a number of liabilities have fallen largely due to stock exchange revaluation, in particular holdings of net equity of households in life assurance recorded as a liability for the insurance and pension fund sector and OFIs' mutual fund equity liabilities. Chart 13 decomposes the overall balance sheet although it should be noted that an element of the figure for OFI's involves an adjustment for the coherence of the accounts as a whole.

The Balance of Payments

The UK has had a current account deficit with the rest of the world in every year since 1984. The deficit widened from 1997 and has been about £19 billion in 1999 and 2000, falling slightly to £15 billion in 2001. This deficit has been driven by a deteriorating trade balance, which was £4.9 billion in the third quarter of 2001 (chart 14). However, the deterioration in the trade balance has generally been counterbalanced to some extent by an increase in the investment income surplus, from £2.3 billion in 1999 to £12.7 billion 2001. From a quarterly perspective the trade balance has showed some improvement over recent quarters compared with the year before.

Chart 14
Balance of payments
£ million



The movements of the trade deficit however mask important movements in the flows of both imports and exports. Chart 15 shows how there was a sharp decline of these flows in the second and third quarters of 2001, reflecting the wider global economic conditions. Subsequently these sharp deteriorations have moved into reverse in quarter two before falling again in quarter three. Export volumes fell by 1.2 percent in the third quarter of 2002, a sharp change compared to the rise of 3.8 per cent in the second quarter of 2002. Import volumes fell a little in quarter three, with growth of -0.5 per cent following growth of 1.3 per cent in quarter two.

Overall, the persistence of the current account deficit since 1984 had led to a deterioration in the UK's international investment position (IIP) with the rest of the world. The net asset/liability balance turned negative in 1995 and peaked at net liabilities of £135.2 billion in 1998. Subsequently it has recovered to show net liabilities of £37.1 billion in quarter three. This is broadly similar to the second quarter, but is a lower net liability than the third quarter last year. This recovery has been partly due to re-valuations of overseas direct investment assets held in the UK that have not been matched with similar revaluation to UK assets overseas. Part of the effect on the IIP may be due to timing of these revaluations.

Chart 15

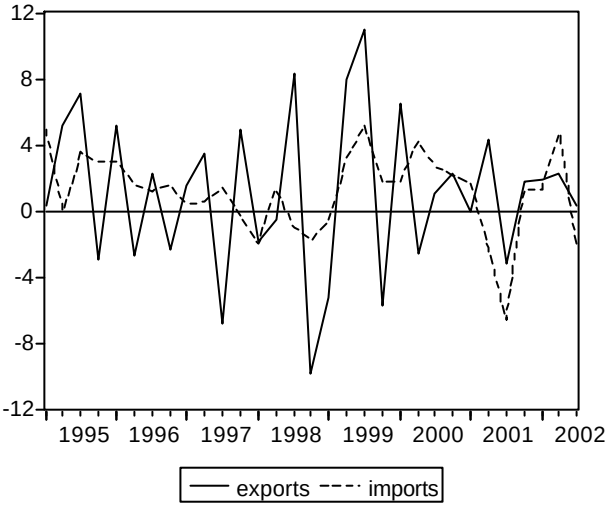
Quarterly growth



UK ECONOMIC ACCOUNTS: THE THIRD QUARTER OF 2002

This article presents the UK national accounts for the third quarter of 2002. It refers to seasonally adjusted data. Latest estimates were released on 23 December 2002.

GROSS DOMESTIC PRODUCT

GDP at current and constant prices (Table A1)

Latest figures show that gross domestic product (GDP) at constant 1995 market prices rose by 0.9 per cent in the third quarter of 2002 compared with the previous quarter (revised from 0.8 per cent). The level of GDP is now 2.1 per cent higher than the same quarter of 2001.

Growth in the last two quarters has been affected by the Jubilee holidays in June, which saw a significant decline in activity in manufacturing and services. Without this effect, growth would have been higher in the second quarter and lower in the third quarter.

Between quarter two and quarter three 2002:

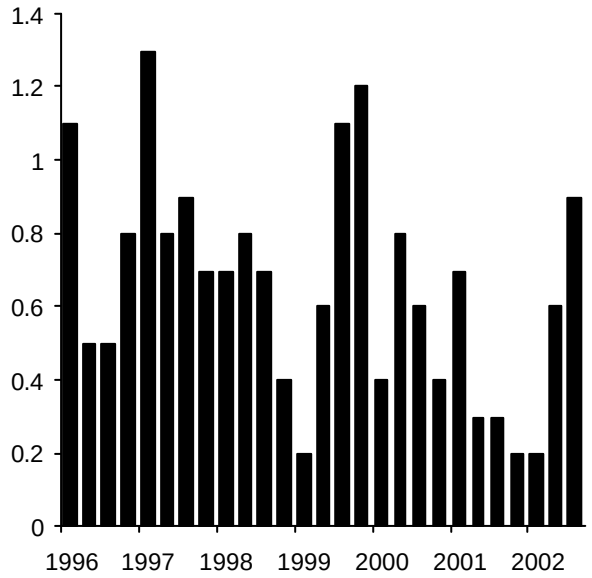
The volume of output in the production industries rose by 0.4 per cent; within this manufacturing rose by 1.0 per cent. Output of the service industries increased by 0.9 per cent (Table B1) over the quarter.

Gross national income at current market prices rose by 2.3 per cent during the third quarter of 2002.

Chart GDP1

GDP at constant 1995 market prices

Percentage change quarter on quarter
seasonally adjusted



Expenditure components of GDP (Tables A2, A7, A8, A9, and A10)

Gross domestic expenditure rose by 1.1 per cent over the quarter.

The GDP deflator is now 3.1 per cent higher than the third quarter of 2001.

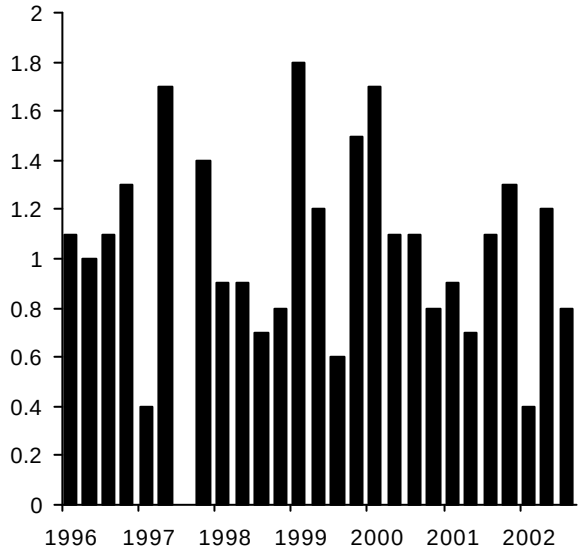
Household final consumption expenditure (Table A7)

Household expenditure rose by 0.8 per cent over the previous quarter with growth across most categories including food and drink, recreation and culture, health, clothing and footwear, housing and communication. In contrast, expenditure on transport, which includes purchases of vehicles, fell by 0.4 per cent.

Chart GDP2

Household final consumption expenditure at constant 1995 prices

Percentage change quarter on quarter
seasonally adjusted



Government final consumption expenditure

Government final consumption expenditure rose by 0.8 per cent in the latest quarter with levels of spending 5.4 per cent above the same quarter of last year.

Gross fixed capital formation (Table A8)

Gross fixed capital formation declined for the fifth time in the last six quarters. It fell by 0.9 per cent in the latest quarter after a rise of 0.5 per cent in the second quarter of

2002. Business investment declined by 2.2 per cent in the latest quarter and is now 9.8 per cent below the level of investment in the third quarter of 2001. General government investment rose by 5.6 per cent, after a large fall of 11.0 per cent in the previous quarter. Analysed by type of asset, there was a large increase in investment in transport equipment, rising by 7.2 per cent, contrasting with a fall of 5.6 per cent in other machinery and equipment.

Changes in inventories (Table A9)

Inventories fell slightly in the latest quarter. The largest decreases were in the manufacturing sector, particularly for stocks of materials and fuel, and the wholesaling industry. In contrast there was a third successive increase in inventories held by retailers.

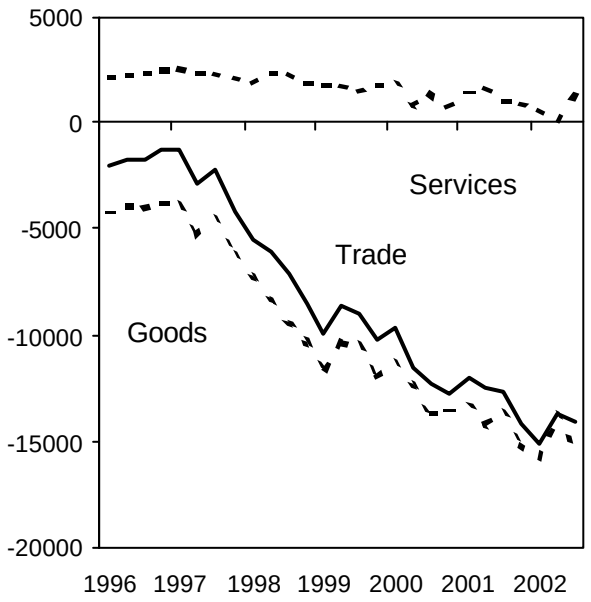
Exports and Imports of goods and services (Table A10)

Exports of goods and services fell by 1.2 per cent over the quarter. Within this, goods fell by 3.4 per cent while services increased by 5.9 per cent.

Imports of goods and services fell by 0.5 per cent over the quarter as goods fell by 0.6 per cent and services showed zero growth.

Chart GDP3

Trade balances at constant 1995 prices
£ million
seasonally adjusted



GDP analysed by output categories at constant prices

(Tables B1 and B2)

Between quarter two and quarter three of 2002, the output of the agriculture, fisheries and forestry industry rose by 0.4 per cent.

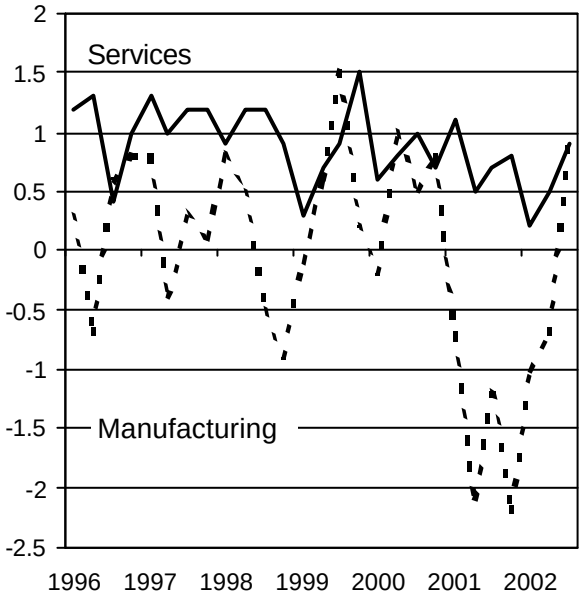
Output of the production industries rose by 0.4 per cent in the latest quarter as the output of mining and quarrying fell by 6.0 per cent, manufacturing rose by 1.0 per cent and the supply of electricity, gas and water rose by 1.8 per cent.

Construction industries continued their recent strong growth as output rose by 1.7 per cent over the quarter.

Output of the service industries rose by 0.9 per cent in quarter three of 2002, compared to a rise of 0.5 per cent in the previous quarter. Distribution rose by 0.7 per cent with growth across motor trades, wholesale and retail. Within the transport, storage and communications sector, output increased by 1.5 per cent in the latest quarter, with growth strongest in post and telecommunication. Transport and storage and hotels and restaurants both rose by 0.1 per cent over the quarter. Output of the financial sector increased by 1.3 per cent. Business services rose by 1.1 per cent driven by an increase in real estate activities. Government and other services rose by 0.6 per cent, with rises in public administration, education, health and social work and other services.

Chart GDP4

Manufacturing and services gross value added at constant 1995 basic prices
Percentage change quarter on quarter
seasonally adjusted



GDP analysed by income categories at current prices (Table D)

GDP at current market prices rose by 1.1 per cent over the quarter.

Compensation of employees rose by 0.7 per cent with earnings growing by 0.8 per cent and employment falling by 0.3. The gross operating surplus of corporations rose by 2.4 per cent. Within this, private non-

financial corporations (including the alignment adjustment) rose by 0.6 per cent and the erratic operating surplus of financial corporations rose by 19.0 per cent.

Taxes on production less subsidies rose by 1.6 per cent over the quarter.

REVISIONS ANALYSIS (TABLE A6)

GDP and components (previously published on 27 November 2002)

For this release data have been revised back to the first quarter of 2001.

Revisions to 2001 estimates

In 2001, the GDP growth rate expressed at constant market prices is 2.0 per cent, unchanged from last month.

Within output in 2001, there are downward revisions to the output of distribution services with the annual growth now at 3.4 per cent compared to 3.8 per cent previously published. The growth of the financial sector has also been revised down, now showing a 3.0 per cent rise compared to a 3.8 per cent rise previously published. There have been upward revisions to the output of hotels and restaurants, revised up to show a decrease of 3.2 per cent compared to a fall of 4.0 per cent previously published. The growth of real estate, renting and business activities has also been revised up, to show an increase of 7.1 per cent compared to a rise of 6.8 per cent previously published. These changes reflect new information from various data sources.

At constant prices in 2001, within expenditure, there were downward revisions to annual growth in household expenditure, mainly due to new figures for air travel. Household expenditure is now estimated to have risen by 3.8 per cent compared to 4.1 per cent previously published. The growth of government expenditure has also been revised downwards in 2001, now standing at 2.3 per cent, compared to 3.1 per cent published last month. These downward revisions affect most areas of government expenditure including health, education, social work and defence. There have been upward revisions to gross fixed capital investment with growth for business investment now at 1.6 per cent compared to the previous estimate of 0.9 per cent. In contrast government investment is now estimated to have grown by 2.5 per cent in 2001, compared to a 3.0 per cent rise previously published.
Compenstion of employees is now estimated to have risen by 6.1 per cent in 2001, compared to 6.0 per cent previously published. Total operating surplus of corporations has also been revised upward, now rising by 1.5 per cent, compared to a fall of 1.1 per cent previously published. These revisions mainly reflect an upward revison to the gross operating surplus of financial corporations, which is now estimated to have risen by 6.8 per cent. The gross operating surplus of non-financial corporations has also been revised upward, now estimated to have grown by 0.9 per cent in 2001.

Revisions to the third quarter of 2002

Growth of GDP at constant market prices for the third quarter of 2002 has been revised up to 0.9 per cent from 0.8 per cent published last month.

This reflects an upward revision to the output of the construction industry in the third quarter of 2002, due to updated information from the Department of Trade and Industry. Construction is now estimated to have grown by 1.7 per cent, compared to 0.5 per cent previously published.

Growth of the production sector remains at 0.4 per cent as a downward revision to the growth of manufacturing is offset by upward revisions to oil and gas extraction and electricity, gas and water supply. Growth of services output is unchanged at 0.9 per cent in the latest quarter.

Within expenditure, growth of household expenditure is unchanged, remaining at 0.8 per cent. Growth in government final consumption expenditure is revised down to show a 0.8 per cent rise compared to 1.3 per cent previously published. Investment is now estimated to have fallen by 0.9 per cent compared to a 2.0 per cent fall published last month. This reflects an upward revision to investment in machinery and equipment (excluding transport equipment). Compared to last month's release, exports of goods and services has been revised up to show a 1.2 per cent fall, from a fall of 1.7 per cent, and imports of goods and services has been revised up to show a 0.5 per cent fall in the latest quarter, from a 0.7 per cent fall.

Within income, the growth of operating surplus of corporations has been revised upwards in the third quarter of this year, to a rise of 2.4 per cent from a fall of 0.2 per cent.

Balance of payments

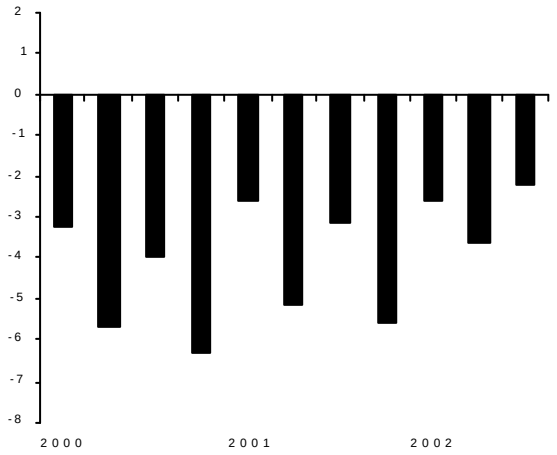
A deficit of £2.2 billion was recorded for the current account in the third quarter. This compares with a deficit of £3.6 billion in the second quarter. A deficit of £2.3 billion was recorded with EU countries compared with a deficit of £2.2 billion in the previous quarter.

The decrease in the current account deficit was due to higher surpluses on trade in services and investment income and a lower deficit on current transfers, partly offset by a rise in the deficit on trade in goods. The surplus on services increased to a record £3.8 billion in the third quarter and the surplus on investment income increased to £4.6 billion. The deficit on trade in goods rose to £8.7 billion from £6.4 billion in the second quarter.

Data in this release have been revised from the first quarter of 2001 following the inclusion of new data from annual benchmark inquiries covering foreign direct investment and international trade in services and later inquiry data for more recent periods. The current account deficit in 2001 has been revised to £16.4 billion, compared with £21.1 billion published in September.

Current balance

£ billion

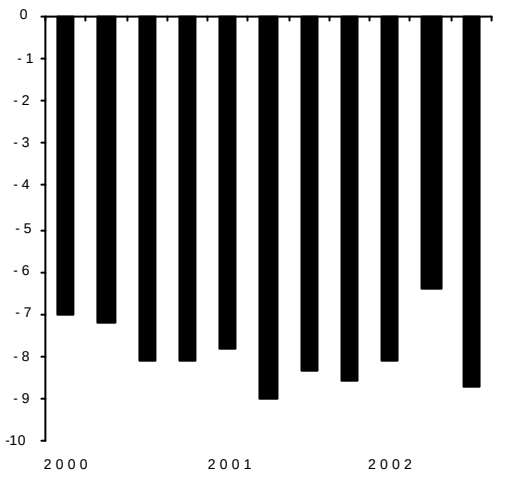


Trade in Goods (Table B2)

The deficit on **trade in goods** in the third quarter was £8.7 billion compared with a deficit of £6.4 billion in the second quarter. Exports fell by £2.6 billion and imports fell by £0.3 billion. Exports to EU countries fell by £1.8 billion and to non-EU countries by £0.8 billion. Imports from the EU rose by £0.5 billion while imports from non-EU countries fell by £0.8 billion. Exports of fuels, semi-manufactures and finished manufactured goods all showed falls of over £0.6 billion. Lower imports of precious stones accounted for most of the fall in imports.

Trade in goods balance

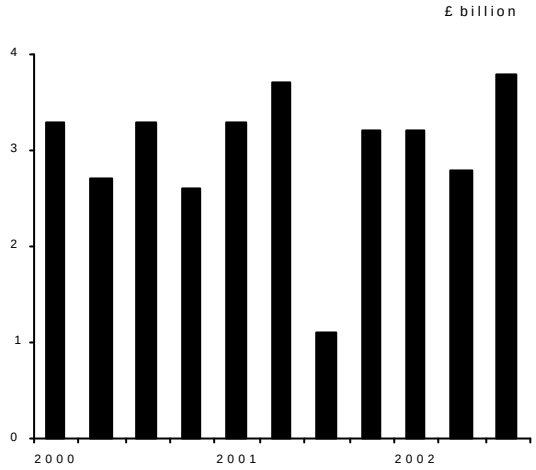
£ billion



Trade in Services (Table B3)

The surplus on **trade in services** was a record £3.8 billion in the third quarter, an increase of £1.0 billion on the £2.8 billion surplus recorded in the second quarter. Exports increased by £1.1 billion, mainly reflecting increases in exports of insurance and other business services. Imports rose by £0.1 billion in the third quarter, reflecting small increases across several accounts. The deficit on travel services continued to grow, reaching a record £3.7 billion in the third quarter.

Trade in services balance

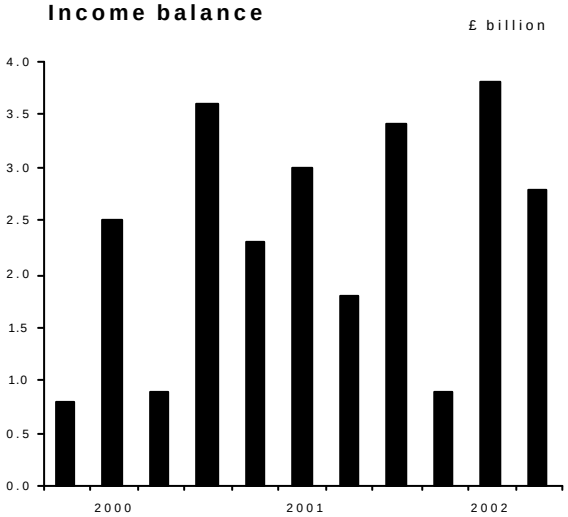


Income (Table B4)

The surplus on **income** in the third quarter was £4.6 billion compared with a surplus of £2.6 billion in the previous quarter. The surplus on direct investment grew to £6.9 billion in the third quarter compared with £5.9 billion in the previous quarter. Portfolio investment recorded a deficit of £0.1 billion compared with a deficit of £0.5 billion in the previous quarter. The deficit on other investment narrowed to £2.5 billion in the third quarter from £3.0 billion in the previous quarter.

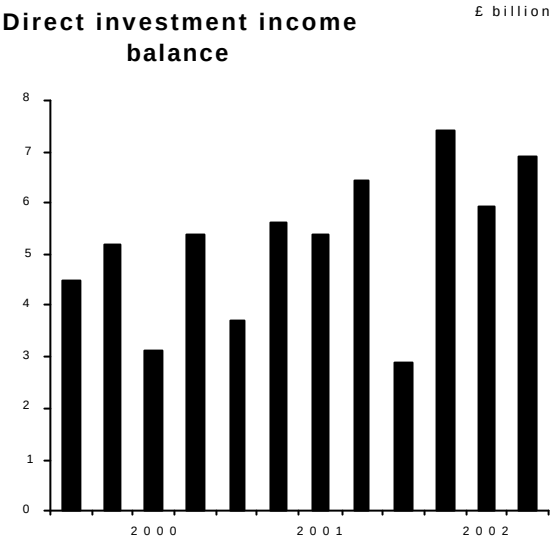
The **compensation of employees'** account was broadly in balance, the same as in the previous quarter.

Income balance



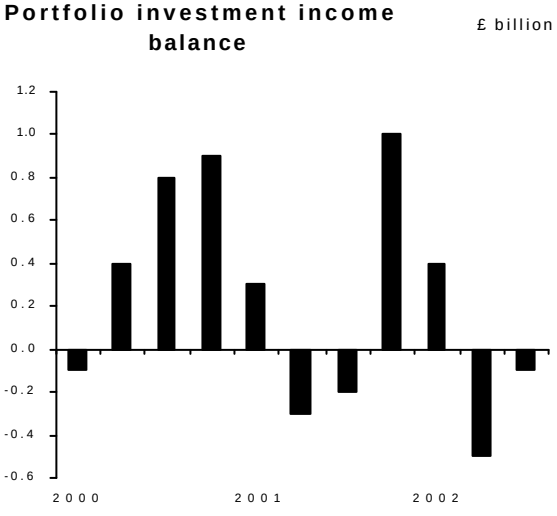
The surplus on **direct investment** income was £6.9 billion in the third quarter. Credits increased to £12.9 billion in the third quarter, principally reflecting an increase in the profits of UK owned oil companies. Debits were £6.0 billion in the third quarter, a decrease of £0.4 billion on the value recorded for the previous quarter, mainly due to lower earnings of foreign owned financial corporation in the UK.

Direct investment income balance

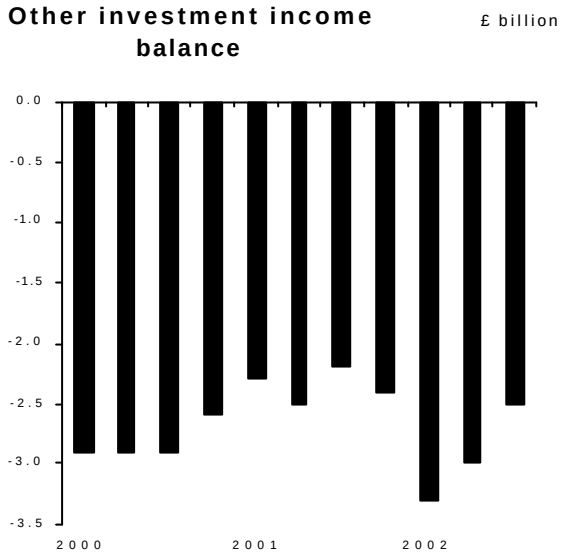


Portfolio investment income recorded a deficit of £0.1 billion in the third quarter compared with a deficit of £0.5 billion in the previous quarter. Portfolio investment credits were broadly unchanged at £7.9 billion in the third quarter. Portfolio investment debits fell to £8.0 billion in the third quarter, mainly due to lower dividend payments on foreign investment in UK equity securities.

Portfolio investment income balance



The deficit on **other investment** income was £2.5 billion in the third quarter compared to £3.0 billion in the previous quarter. Income credits rose by £0.2 billion to £10.0 billion while debits fell by £0.3 billion to £12.5 billion.



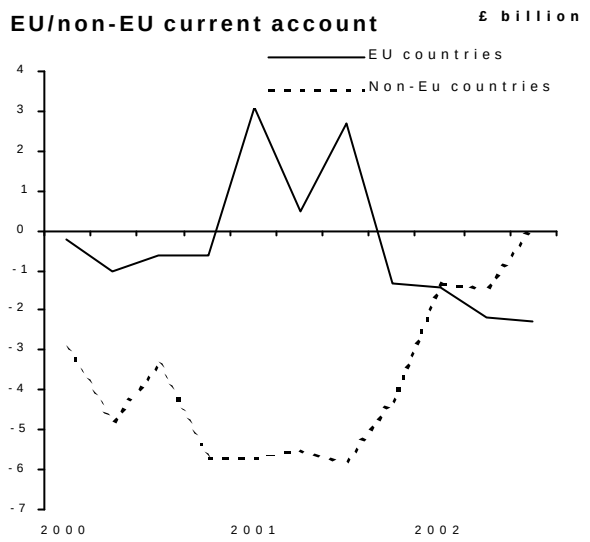
Income on **reserve assets** was £0.2 billion in the second quarter, largely unchanged from the value recorded in the previous quarter.

Current transfers (Table B5)

The deficit on **current transfers** decreased to £1.9 billion in the third quarter from £2.7 billion in the previous quarter. Credits were virtually unchanged from the previous quarter at £3.4 billion. Debits fell by £0.7 billion to £5.2 billion in the third quarter reflecting a sharp fall in other sectors VAT based contributions. It should be noted that the quarterly path of net contributions to EU institutions is erratic.

Current account with EU and non-EU countries (Table B6)

The current account with **EU countries** recorded a deficit of £2.3 billion in the third quarter compared with a deficit of £2.2 billion in the previous quarter. The current account with **non-EU countries** showed a small surplus of £0.1 billion in the third quarter compared with a deficit of £1.4 billion in the second quarter. The move into surplus was driven by increases in both the services and income balances.



Capital Account (Table B7)

The **capital account** surplus was £0.3 billion in the third quarter, an increase of £0.1 billion on the second quarter.

Financial Account (Table B8)

The **financial account** showed a net inflow (i.e. inward investment) of £9.2 billion in the third quarter compared with a net inflow of £3.3 billion in the second quarter. There was net disinvestment abroad of £16.5 billion and net disinvestment in the UK of £7.3 billion in the third quarter.

Direct investment abroad showed a net disinvestment of £6.1 billion in the third quarter compared with a net investment of £11.0 billion investment recorded in the previous quarter. This principally reflects inter-company transactions, for which there was a disinvestment of £22.3 billion compared with a disinvestment of £4.6 billion in the previous quarter. Reinvested earnings were £0.7 billion higher in the third quarter and equity capital transactions were £0.2 billion lower. Disinvestment by private non-financial corporations were the main cause of the overall disinvestment abroad. UK financial corporations showed net investment during the quarter.

Foreign direct investment in the UK was £3.5 billion in the third quarter compared with an investment of £13.6 billion in the second quarter. Equity capital rose from £3.4 billion in the second

quarter to £6.9 billion in the third quarter. There was a £0.2 billion rise in reinvested earnings to £2.5 billion while other capital transactions showed disinvestment of £6.0 billion in the third quarter. The lower level of direct investment into the UK in the third quarter resulted from a net disinvestment by financial corporations.

Direct investment acquisitions and disposals in the third quarter of 2002 included:
Outward acquisitions (of foreign companies):
The purchase of the Miller Brewing Company by South African Breweries Plc for a publicly reported £2.1 billion.
Outward disposals (of foreign companies):
The sale of Marconi Mobile Holdings SpA by Marconi Plc for a publicly reported £0.4 billion.
Inward acquisitions (of UK companies):
The purchase of Powergen Plc by E.On AG for a publicly reported £5.2 billion.
Inward disposals (of UK companies):
The sale of Coral Eurobet Ltd by Deutschebank AG for a publicly reported £0.9 billion.

Note: The figures used are those reported in the financial press

Portfolio investment abroad showed disinvestment of £35.4 billion in the third quarter, second quarter. There was disinvestment of £4.2 billion in equity securities and £31.2 billion in debt securities in the third quarter. In the third quarter, UK banks disinvested £15.0 billion in foreign equity and debt securities and other financial intermediaries disinvested £23.7 billion.

Portfolio investment in the UK showed investment of £5.8 billion in the third quarter compared with investment of £22.2 billion in the second quarter. Investment in equity securities showed disinvestment of £0.5 billion, compared to investment of £3.5 billion in the previous quarter. Investment in debt securities was £6.3 billion in the third quarter compared with £18.6 billion in the second quarter.

Financial derivatives showed net settlement receipts from interest rate swaps contracts of £2.7 billion in the third quarter compared with net settlement receipts of £2.0 billion in the previous quarter.

Other investment abroad showed investment of £27.0 billion in the third quarter compared with disinvestment of £23.9 billion in the second quarter. The investment was mainly due to UK banks increasing their deposits abroad by £19.9 billion compared with withdrawals of £17.8 billion in the previous quarter. UK banks also increased their lending abroad by £20.2 billion in the quarter. The increased investment by UK banks was partly offset by UK securities dealers who withdrew £38.5 billion from deposit abroad.

Other investment in the UK showed disinvestment of £16.6 billion in the third quarter following on from the disinvestment of £10.4 billion in the second quarter. UK securities dealers repaid £55.0 billion of outstanding loans and other UK residents repaid £3.8 billion. These loan repayments were partly offset as UK banks' deposit liabilities increased by £42.1 billion in the third quarter.

Reserve assets showed investment of £0.7 billion in the third quarter after being in balance in the previous quarter.

International Investment Position (B14)

The **international investment position** showed net external liabilities (i.e. liabilities exceed assets) of £36.3 billion at the end of the third quarter compared with net external liabilities of £37.6 billion at the end of the second quarter. UK assets abroad fell by £137.2 billion from the end of the second quarter to £3124.8 billion at the end of the third quarter. UK liabilities fell by

£138.5 billion from the end of the second quarter to £3161.1 billion at the end of the third quarter. The large falls in both assets and liabilities were due to disinvestment during the quarter and falls in equity prices as reflected in global equity markets.

BACKGROUND NOTES

This quarter

1. This release includes data available at 10 December 2002.

2. Figures have been revised from the first quarter of 2001. The main revisions stem from the inclusion of annual inquiry results for International Trade in Services and for Foreign Direct Investment.

   Foreign direct investment figures for 2001 are on a different basis to those released on 12 December. Late returns to the 2001 annual inquiry have not been included in this Release.

   Trade in goods - the revisions to trade in goods reflect the incorporation of the final HM Customs and Excise data for 2001.

   Trade in services - the revisions to 2001 and the first two quarters of 2002 reflect later, more detailed data from the International Trade in Services Annual Inquiry and International Passenger Survey.

   Income - the income revisions mainly reflect the inclusion of the annual benchmark inquiries for Foreign Direct Investment and non-residents' ownership of UK company shares from the Share Ownership Survey.

   Current transfers - the revisions reflect later data on taxes and government payments to the EU institutions.

3. Foreign direct investment figures for 2001 are on a different basis to those released on 12 December. Late returns to the 2001 annual inquiry have not been included in this Release.

General notes

4. Current and capital accounts are seasonally adjusted. Financial account and international investment position data are not seasonally adjusted.

5. When compiling the geographic breakdown of income, current transfers and trade in services the EU countries are seasonally adjusted. The non-EU seasonally adjusted figure is calculated by subtracting the seasonally adjusted EU total from the seasonally adjusted world total. Both EU and non-EU data are seasonally adjusted for trade in goods, these are aggregated to form the world total.

6. International Investment Position statistics are based on recording direct investments at book values and other assets and liabilities at estimated market values and are likely in some respects to be deficient in scope and coverage. Quarterly estimates tend to be less reliable because they are largely based on cumulated flows and not reported levels.

7. In theory, every credit entry should be matched by a corresponding debit so that total current, capital and financial account credits should be equal to, and therefore offset by, total debits. In practice there is a discrepancy termed net errors and omissions. The net errors and omissions are shown on Table B1.

SECTOR AND FINANCIAL ACCOUNTS: THE THIRD QUARTER OF 2002

This article presents the UK sector and financial accounts for the third quarter of 2002. Latest estimates were released on 23 December 2002.

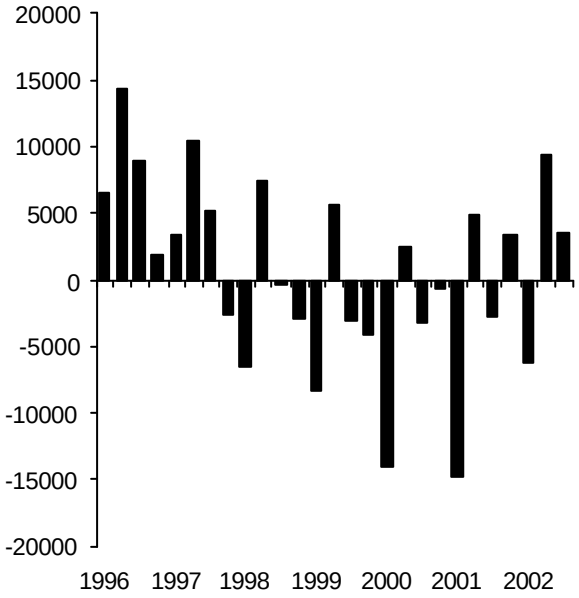
THE PUBLIC SECTOR

Sector position (non seasonally adjusted)

The Public Sector showed net borrowing of £3.6 billion in the third quarter. Within this, central government showed net borrowing of £3.1 billion, local government net borrowing of just £0.03 billion and public corporations net borrowing of £0.4 billion.

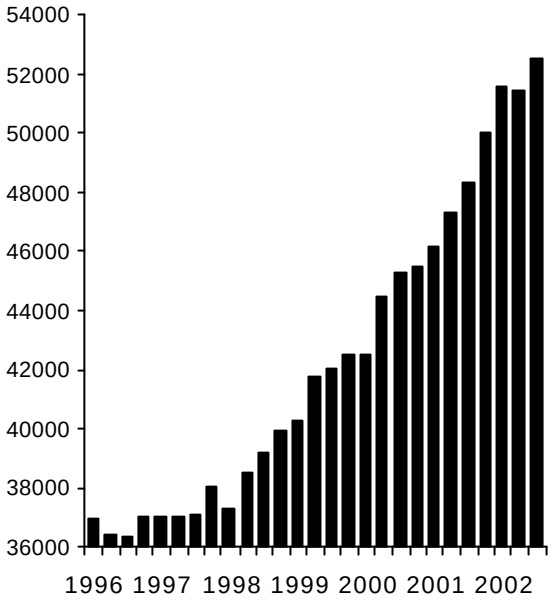
This is the first third quarter to show net borrowing since 1997 and compares with net lending of £2.7 billion in the third quarter of 2001. The third quarter has in recent years been a quarter where net lending is common due to high tax receipts (from yearly self-assessment) within the quarter but increased Government expenditure with receipts showing more modest growth has resulted in the switch to borrowing. (see chart SA1).

Chart SA1
Public Sector Net Borrowing
£ million
non-seasonally adjusted



Government consumption expenditure rose from £48.3 billion in the third quarter of 2001 to £52.5 billion in the third quarter of 2002. The continued recent rise in expenditure reflects the government's plans for increased spending in targeted areas. Social benefits expenditure in the same period rose from £30.5 billion to £32.3 billion.

Chart SA2
Government final consumption expenditure
£ million
non-seasonally adjusted



Public sector net investment was £2.1 billion in the third quarter of 2002, compared with £1.5 billion in the third quarter of 2001. There were year on year increases to public sector gross fixed capital formation of 14.0%.

Interest and dividend payments to the private sector and rest of world were lower (£4.7 billion versus £5.3 billion) in the third quarter of 2002 compared to the third quarter of 2001 due to lower debt levels and lower interest rates.

Receipts from taxes on income increased marginally from £35.7 billion in the third quarter of 2001 to £35.9 billion in the third quarter of 2002.

Tax receipts on production were up in the third quarter of 2002 (£36.9 billion against £34.5 billion in the third quarter of 2001), mainly due to higher VAT receipts - partially because of a VAT refund from the European Union - and the introductions of the Climate Change and Aggregates Levies. (see chart SA3).

Main events within the **Financial Accounts** included:

- Net redemptions of gilts worth £1.0 billion in the third quarter, with larger net issues of Treasury Bills worth £1.6 billion. This reflects the trend towards short-term rather long-term financing of government debt. (see chart SA4).

Chart SA3

Tax receipts on production
£ million
non-seasonally adjusted

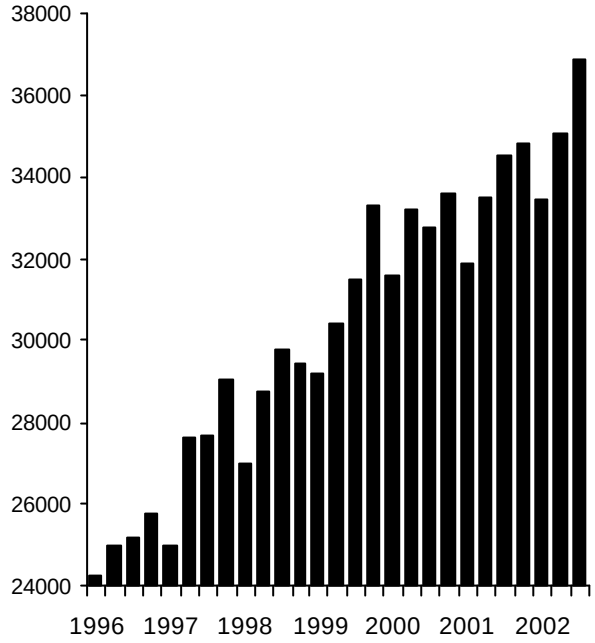


Chart SA4

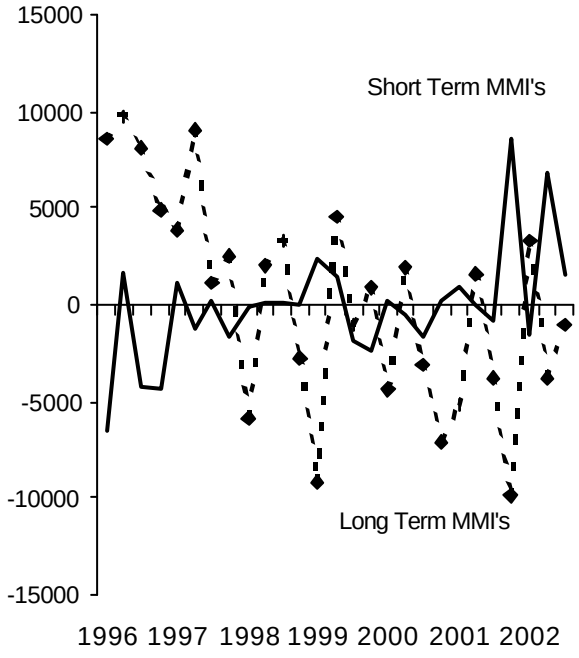
Government issues of Money Market Instruments
£ million
non-seasonally adjusted



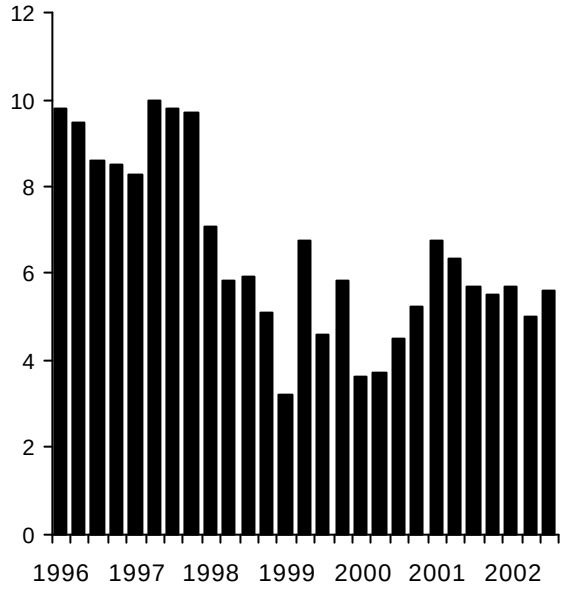
THE HOUSEHOLD SECTOR

Sector position (seasonally adjusted)

Saving ratio:
The saving ratio was 5.6 per cent in the third quarter of 2002, an increase on the 5.0 per cent value in quarter two, but in line with other recent estimates. (See chart SA5).

Chart SA5

Household Saving Ratio
per cent
seasonally adjusted



Gross household disposable income rose by 0.9 per cent in quarter three; the deflator rose by 0.2 per cent; so real household disposable income rose by 0.7 per cent.

Available resources increased by 1.6 per cent on quarter two compared with a rise in household and NPISH final consumption expenditure of 1.0 per cent. This resulted in a rise in the saving ratio.

This rise in the saving ratio in quarter three was mainly due to property income - receipts back up from a low level in quarter two (although still relatively low); and payments down.

In addition there was an increase in employment/self-employment income, partially offset by commensurate increase in taxes.

The main quarter on quarter changes to components of household disposable income were as follows:

- Within B.2/B.3 gross operating surplus (main component is imputed rent) rose by 2.0 per cent , and mixed income by 1.2 per cent.
- There was an increase of just 0.4 per cent in wages & salaries (D.11); the lowest quarter on quarter increase since 1996q1; and the lowest quarter on

an annual comparison since 1994 quarter three. There was a rise of 0.8 per cent in the published Average Earnings index (0.6 for current weighted) whilst there was a fall in employment of 0.3 per cent, quarter three on quarter two.

- D.12 employers contributions increased by 2.5 per cent, due to higher employers pension contributions.

- D.4 Property income receipts showed a rise of 3.0 per cent on the low quarter two figure; but this was still 10 per cent lower than the 2001 quarter three figure. Both D.42 distributed income of corporations and D.44 attributed property income of insurance holders showed increases between quarter two and quarter three. The fall on an annual comparison was partly due to dividends received from companies - dividends from quoted shares (as in quarter two) were slightly lower than in the same quarter of 2002; dividends from unquoted shares were also down on 2001 quarter three - by nearly £1.0 billion - (although this represented a recovery from the 2002 quarter two level). On an annual comparison D.41(R) interest received also fell considerably (lower interest rates).

- D.41U interest payments showed a fall in quarter three on quarter two of 3.1 per cent reflecting lower interest rates and good deals available on mortgages - new mortgages were at a record level.

- No change on quarter two in social benefits received (D.62): a fall in private pension receipts (D.622) - back down from an exceptionally high quarter two - was offset by increases in social benefits received from government and unfunded social benefits.

There was an offset to the above increases with decreases to gross disposable income caused by:

- An increase of 2.1 per cent in social contributions paid;

- A 1.6 per cent in taxes on income (D.51) which was due to increases in tax on PAYE income and self assessment tax (in line with increases in income).

Total resources rose by 1.6 per cent, a considerably larger increase than in gross disposable income. This is because the erratic series - adjustment for the change in net equity of households in pension funds rose markedly from (the relatively low) £2.6 billion in quarter two to £3.8 billion in quarter three.

Net borrowing of the sector was £0.4 billion in the third quarter.

Main events in the financial account:

On the liabilities side, new loans on dwellings continued to set new records. At £22.8 billion in the third quarter it was 43 per cent up on quarter three last year. (see chart SA7).

At the same time the new asset position has weakened mainly reflecting sales of shares and other equity.

Chart SA6

Household Net Lending

£ million

seasonally adjusted

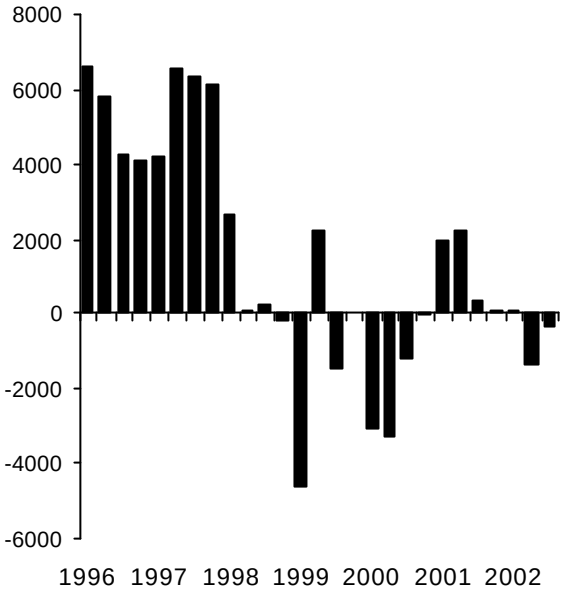


Chart SA7

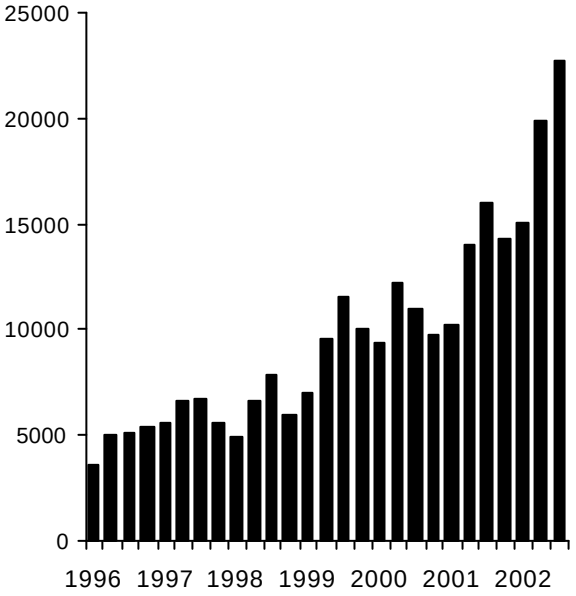
Household loans secured on dwellings

£ million

non-seasonally adjusted



Household Wealth:

Net financial wealth fell sharply in quarter three to £1536.0 billion, the lowest since 1996 quarter four.

The value of financial assets fell in the quarter to £2428.4 billion, linked to the movement in the stock market; whilst financial liabilities continued to rise, to £892.4 billion.

THE PRIVATE NON-FINANCIAL CORPORATIONS SECTOR

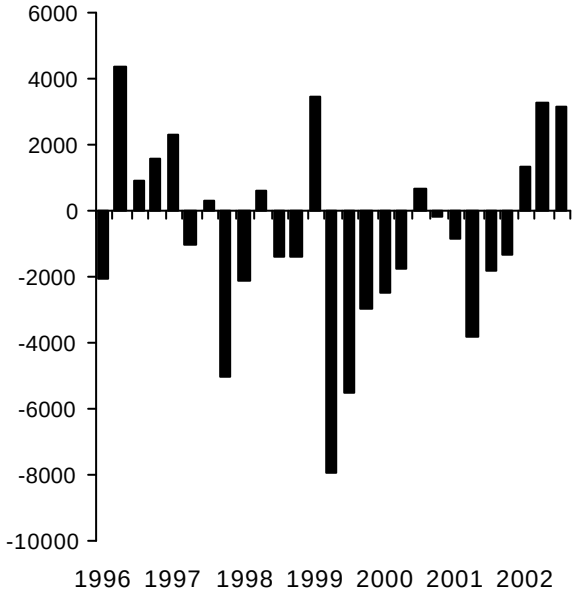
Sector position (seasonally adjusted)

Net lending of private non-financial corporations was unchanged from the previous quarter at £3.2 billion, this continues the recovery in 2002, and follows borrowing of £7.8 billion in 2001.

Within the primary income account, the gross operating surplus of non-financial corporations rose by 0.6 per cent. Property income receipts rose by 9.2 per cent and property income payments rose by 1.7 per cent over the quarter. The increase in the operating surplus and in net property income led to a rise in the balance of gross primary income of 3.5 per cent.

Despite taxes on income rising by 2.0 per cent, gross disposable income still rose by 3.9 per cent over the quarter. This rise was entirely offset within the capital account mainly due to the high destocking in quarter two not being observed in the latest quarter.
(See chart SA8).

Chart SA8
Private NFC's Net Lending
£ million
seasonally adjusted



THE FINANCIAL CORPORATIONS SECTOR

Sector position (seasonally adjusted)

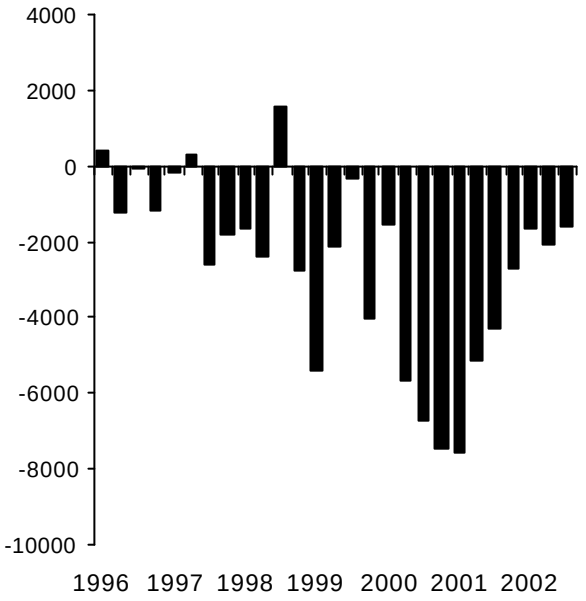
In the third quarter of 2003, the net borrowing of financial corporations was £1.6 billion, £0.5 billion lower than in the previous quarter and the lowest since the first quarter of 2001.

The gross operating surplus rose £1.0 billion in the latest quarter, mostly due to the £0.7 billion increase in earnings from financial intermediation services (FISIM). Receipts of interest and of dividends both fell, by £1.7 billion and £1.3 billion respectively. Payments of interest and dividends were also lower, by £0.6 billion and £2.2 billion.

Receipts of employers' actual social contributions were £0.4 billion higher than in the previous quarter, whilst payments of social benefits fell £0.7 billion, resulting in an increase in the D.8 adjustment (for the change in the net equity of households in pension funds) of £1.2 billion. Payments of taxes on income were £0.3 billion lower than in the second quarter.

(see chart SA9).

Chart SA9
Financial Corporations Net Lending
£ million
seasonally adjusted



Financial account (non-seasonally adjusted)

Banks: There was an increase in the net acquisition of financial assets and liabilities in the third quarter by UK banks. Deposits with rest of the world MFIs increased to £19.9 billion in the third quarter of 2002, following disinvestment in the second quarter at £17.8 billion. Investment in Short Term Money Market Instruments (MMIs) was £3.4 billion in the third quarter, compared with disinvestment of £5.0 billion in the second quarter. Sterling Bank deposits increased in the third quarter at £12.4 billion from £5.1 billion in the second quarter. Similarly, sterling loans by UK MFIs increased at £17.2 billion in the third quarter from £11.2 billion in the second quarter. These increases in investment were partially offset by disinvestment in bonds issued by the rest of the world at £11.5 billion, compared with substantial investment in the second quarter at £17.3 billion. The largest increase in financial liabilities in the third quarter was in transferable deposits at £63.8 billion, compared with £39.6 billion in the second quarter.

Building societies: Conversely there was a decrease in the net acquisition of financial assets and liabilities in the third quarter by Building Societies. In the third quarter of 2002 Building Societies increased loans at £6.4 billion, compared with £4.2 billion in the second quarter. This is the highest quarterly figure since the third quarter of 1990. This was more than offset by a fall in investment in securities (other than shares) at £0.3 billion, compared with £1.9 billion in the second quarter and disinvestment in deposits (mainly with banks and other building societies) at £0.5 billion, compared with investment at £1.3 billion in the second quarter. The decrease in financial liabilities of building societies was lead by a fall in investment in securities (other than shares, namely short term MMIs) at £0.6 billion in the third quarter, compared with investment at £2.2 billion in the second quarter.

Other financial intermediaries and financial auxiliaries: There was a record net withdrawal of deposits with overseas monetary financial institutions of £38.3 billion in the third quarter. There was also net disinvestment in overseas bonds of £18.3 billion, the highest since the fourth quarter of 1999. Loans to households secured on dwellings continued to increase strongly. Liabilities on short term loans from monetary financial institutions fell sharply: those from overseas institutions fell £55.5 billion and foreign currency loans from UK institutions fell £8.0 billion, though sterling loans from UK institutions showed a net increase of £6.4 billion.

Insurance companies and pension funds: Total net acquisition of financial assets grew strongly in the quarter primarily driven by acquisitions in securities other than shares. There was net investment in all bonds, with investment in UK central Government and other UK resident bonds being particularly strong. Net disinvestment in quoted UK shares was more than offset by investment in shares issued by the rest of the world and UK mutual funds reserves. There was also a strong growth in the acquisition of financial liabilities being driven by continued strength of net equity of households in life assurance and pension funds.

THE REST OF THE WORLD SECTOR

Sector position (seasonally adjusted)

The external balance **B.12** (current account) shows a decreased surplus of £2.2 billion compared with £3.6 billion in the previous quarter.

The Goods and Services surplus **B.11** rose to £4.9 billion compared with £3.5 billion in the previous quarter. Whilst the deficit on Trade in Services increased to a record £3.8 billion, the surplus on Trade in Goods also increased substantially to £8.7 billion (up from £6.4 billion in the previous quarter). Exports of goods (to the UK) fell by £0.3 billion, whilst imports (from the UK) fell by £2.6 billion. Lower UK exports of finished manufactured goods and a lower UK oil surplus were the main drivers of the widening balance on goods - the bulk of the fall in both exports and imports relates to trade with the USA; UK exports to the EU, Ireland in particular, also fell. Within Services, higher imports (from the UK) of a range of business and financial services more than offset increased exports (to the UK) of travel services.

Income **D.4** showed a higher deficit of £4.6 billion in quarter three, compared with £2.6 billion in quarter two. Dividend income received **D.42** fell to £6.7 billion, whilst dividends paid rose to £6.4 billion - the overall surplus in D.42 decreased by £1.7 billion. High levels of reinvested earnings D.43 on UK foreign direct investment continued into quarter three.

The surplus on current transfers decreased to £1.9 billion, largely as a result of a reduction in UK non-government sectors payments to EU institutions (VAT-based contributions).

NOTES

National Accounts on the Internet

More information on National Accounts, Sector Accounts and Balance of Payments and can be found at:

http://www.statistics.gov.uk/themes/economy/articles.asp

All National Statistics First Releases are available on the Internet at:

http://www.statistics.gov.uk/press_release/default.asp

This publication is available from the National Statistics web-site (http://www.statistics.gov.uk/). In addition the data, including those for earlier periods, can be accessed on-line via StatBase. Data can also be obtained in computer readable form via the National Statistics DataBank Service. For details see introduction on page 4.

As well as the data presented in this publication, many other series are also available quarterly. More detailed quarterly and monthly financial data are shown in *Financial Statistics* and various National Statistics *Bulletins*.

Interpretation of constant price estimates

In the interpretation of quarterly and annual national accounts estimates, special attention needs to be paid to the higher margins of error attaching to series estimated at constant prices when the rate of inflation is changing significantly. Movements in exchange rates may also affect the valuation of international transactions.

Effects of Spectrum Payments

The tables in this publication treat the payments to Government for the third generation of mobile phone spectrum use as rent. This is consistent with the ONS's interpretation of ESA95. An article in the 2000 Q2 edition of United Kingdom Economic Accounts gave a comprehensive description of the impact of these receipts in the accounts. In summary receipts of £22.5 billion were paid to government during the second and third quarters of 2000. These are treated as pre-payments of rent at the rate of £1 billion per annum over the life of the licences. The sector accounts article in this edition refers to the payments where they impact on the private non-financial corporation and central government sectors.

Note on Monetary Financial Data

The accounts for both banks and buildings societies reflect improvements recently implemented by the Bank of England in their aggregation methods. These changes have been particularly important and widespread in the area of banks' transactions in foreign currency instruments.

Quarterly alignment adjustments

To improve the coherence of the quarterly accounts, adjustments are made to quarterly estimates of both the expenditure and income analyses of GDP for 1983 onwards. These adjustments, which sum to zero across each of the years 1983 to 2001, are attributed to the change in inventories component of GDP analysed by expenditure and to gross operating surplus of companies component analysed by income. These adjustments may be considered as allowing for timing differences in the recording of transactions in different parts of the economy. In addition changes in inventories is a component where accurate quarterly measurement is more difficult. These quarterly adjustments modify the aggregates derived from expenditure or income components so that they better reflect the quarter to quarter paths of the output measure of GDP.

The alignment adjustments included in GDP estimates in this publication are as follows:

ALIGNMENT ADJUSTMENTS

1 The residual error is, by convention, the amount by which the expenditure -based approach to measuring GDP exceeds the income-based estimate. It is also the sum of two components: the statistical discrepancy (expenditure) with sign reversed, and the statistical discrepancy (income) with natural sign.

2 Income data deflated by the implied GDP deflator, based on expenditure data.
