About the Office for National Statistics

The Office for National Statistics (ONS) is the government Agency responsible for compiling, analysing and disseminating many of the United Kingdom's economic, social and demo-graphic statistics, including the retail prices index, trade figures and labour market data, as well as the periodic census of the population and health statistics. The Director of ONS is also the National Statistician and the Registrar General for England and Wales, and the agency administers the statutory registration of births, marriages and deaths there.

Introduction

UK Economic Accounts – the quarterly national accounts publication brings together recently published data on national and financial accounts and the balance of payments for the United Kingdom. *UK Economic Accounts* replaces the articles on the National Accounts and Balance of Payments previously included in *Economic Trends*. It contains two articles incorporating text, charts and tables.

Concepts, Sources and Methods

With effect from 24 September 1998 the UK national accounts were converted onto the European System of Accounts 1995 (ESA95). This change results in a number of changes to the terminology and methodology used in presenting and compiling the accounts. A short description of the national accounts is given in the introduction to the 2002 edition of *United Kingdom National Accounts*, the National Statistics *Blue Book*. More detailed information is available in *United Kingdom National Accounts: Concepts, Sources and Methods* (TSO 1998) and an overview of the move to ESA95 is available in *Introducing the ESA95 in the UK* (TSO 1998). Details of the balance of payments accounts are given in the 2002 edition of the Pink Book. Further information on the financial accounts is in the *Financial Statistics* and the *Financial Statistics Explanatory Handbook*.

Key Economic Developments: The second quarter of 2003

This article brings together a range of economic statistics on the last quarter and highlights key developments in the economy as well as providing analysis of the sector and financial accounts.

UK Economic Accounts: The second quarter of 2003

This article presents annual and quarterly estimates of national accounts providing a breakdown of the components of GDP and the Balance of Payments.

Appendix tables

The tables in the Appendix give series of quarterly figures and quarterly and annual growth rates. The data in these tables can be obtained in computer readable form via On-line Services Branch. For details see box below.

Notes on the tables

- 1 Most quarterly data are available seasonally adjusted: those not seasonally adjusted are indicated.

- 2 Rounding may lead to inconsistencies between the sum of constituent parts and the total in some tables.
- 3 "Billion" denotes one thousand million.
- 4 There is no single correct definition of money. Consequently, several definitions of money stocks are used:

M0 the narrowest measure consists of notes and coins on circulation outside the Bank of England and bankers' operational deposits at the Bank.

M2 comprises notes and coin in circulation with the public plus sterling retail deposits held by the UK private sector with UK banks and building societies.

M4 comprises notes and coin in circulation with the public, together with all sterling deposits (including certificates of deposit) held with UK banks and building societies by the rest of the private sector.

- 5 **DM** - Deutschmark
- 6 **ERM** - Exchange Rate Mechanism
- 7 **ERI** - Exchange Rate Index
- 8 Symbols used:
 - .. not available
 - nil or less than half the final digit shown

UK Economic Accounts on the Internet

Time Series Data

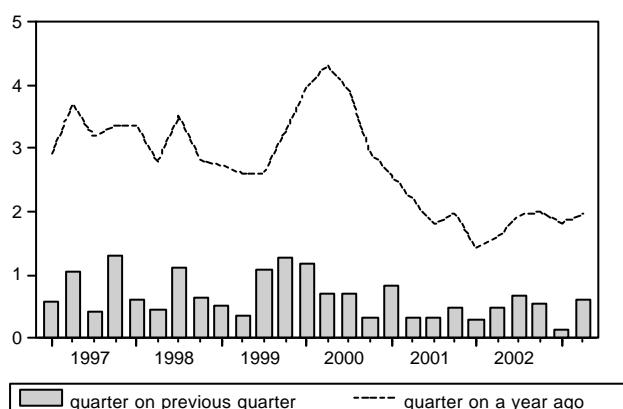

Access to around 40,000 time series, cross sectional data and metadata from across the Government Statistical Service (GSS), organised by theme and subject. Download many datasets, in whole or in part, or consult directory information for all GSS statistical resources, including censuses, surveys, periodicals and enquiry services. Information is posted as PDF electronic documents, or in XLS and CSV formats, compatible with most spreadsheet packages.

KEY ECONOMIC DEVELOPMENTS: THE SECOND QUARTER OF 2003

National Accounts data overview

Quarterly GDP growth in the second quarter of 2003 was 0.6 per cent, up from 0.2 per cent in the first quarter of 2002 and 0.5 per cent in the last quarter of 2002. The annual rate of growth in the second quarter, at 2.0 per cent, is slightly above the 1.8 per cent of the previous quarter, although this annual rate will have been distorted by the fact that GDP in the second quarter of 2002 was effected by the Jubilee (chart 1). This current set of data is the first to be calculated by the new method of chain linking, and as a result the historic numbers have also changed from those contained in previous versions of this article and so are not directly comparable with earlier editions.

Chart 1
Gross domestic product
Growth

Internationally the second quarter was a mixed picture as growth picked up in the US and to a lesser extent in Japan but continued to stagnate in the EU. The three biggest mainland EU economies, France, Germany and Italy, all saw their output fall slightly in the second quarter. Much of the acceleration in growth in the US was down to spending on the Iraqi conflict but consumer spending was also buoyant and even investment showed some signs of life. The biggest drag on growth was the export sector, which actually declined during the quarter, a pattern that was repeated in almost all of the major OECD economies. Japanese economic growth was also supported by consumer spending and in particular by a rebound in investment. In contrast many European economies continued to suffer from stagnant domestic demand as well as sluggish exports. Even those economies that saw some acceleration in activity still continued to experience sluggish labour markets.

Consumer expenditure in the UK picked up significantly in the second quarter of 2003 following a first quarter fall, however growth remained below the more rapid growth rates seen in the last two years. Second quarter growth was 0.7 per cent, which compares with a fall of 0.2 per

cent for the first quarter. Growth in other areas of final spending showed a mixed picture when compared to the previous quarter. Gross fixed capital formation rose by 1.2 per cent in the second quarter of 2003, after falling by 0.7 per cent in the first quarter. This rise was attributable to investment in buildings and particularly in housing, as businesses were still cutting back on their spending on new equipment. Exports, which had grown strongly in the first quarter, fell back in quarter two but the impact of this on GDP was offset by a similar reversal for imports. Meanwhile, quarterly growth in government demand, which had surged in the first quarter, at least partly due to expenditure on the Iraqi conflict, fell back to a more modest 0.5 per cent growth rate in the second quarter.

On the output side the principle cause of the acceleration in growth was due to a surge in construction output. This category of production underwent a dramatic turnaround from falling by 1.9 per cent in the first quarter of 2003 to rising by 4.4 per cent in the second. Outside this sector the differences between the first and second quarter were much more modest. Output of the production industries went up by 0.2 per cent, compared with a small fall in the previous quarter. This was due both to a rebound in electricity production, which was partly due to the impact of unseasonably hot weather and partly by a rebound in manufacturing. In contrast, the service sector grew more slowly in the second quarter than the first with the weakness being particularly concentrated in transport and storage.

The UK corporate sector proved to be a net lender in the second quarter for the sixth successive quarter in a row. Unfortunately as these surpluses have been quite modest when compared with the much larger deficits ran during the period of heavy borrowing between 1997 and 2001, the sector as a whole still remains burdened with very high debt levels. The faster rate of consumer spending growth in the first quarter was partly paid for by an acceleration in household's real disposable income. Despite this however, households remained net borrowers and as a result their savings rate fell further to 4.8 per cent, from a revised 5.0 per cent in quarter one. Household's debt levels continue to climb, although the quarter interest payments on the loans are being kept down by very low interest rates. The government sector continued to be a large net borrower due to waning tax revenues, alongside big rises in cash expenditure. The current account of the UK balance of payments was in the deficit to the tune of £8.6 billion in the second quarter largely due to fall off in investment income, while the previously announced small surplus for the first quarter was revised down to a £2.3 billion deficit.

Markets and monetary developments

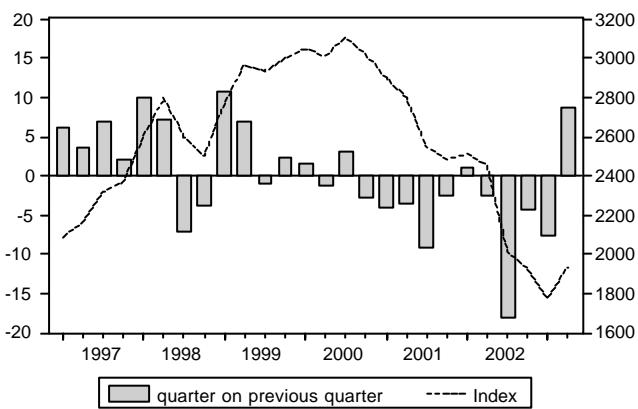

The Bank of England's Monetary Policy Committee (MPC) left the Bank Repo rate unchanged during the second quarter, although it was reduced by a quarter of a point

from 3.75 per cent to 3.5 per cent on July 10th just after the quarter ended. Throughout the quarter it had been clear that a number of members of the Committee, citing the downside risks to growth both in the UK and elsewhere, had been in favour of another small rate cut, despite the fact that the inflation rate was slightly above target. The majority, however, remained of the opinion that the downside risks for economic growth were diminishing and that another loosening would only encourage to build up further unsustainable levels of debt.

The general air of pessimism during the first quarter was reflected in a further fall in stock market prices as the bear market seemingly continued into its fourth successive year (see chart 2). During the first quarter the FTSE All Share Index fell by just under another 8%. The second quarter though saw a recovery in the market taking it up 9% and leaving it above its levels at the start of the year, although this still left the index some 20% below its level at the same period in 2002.

Chart 2

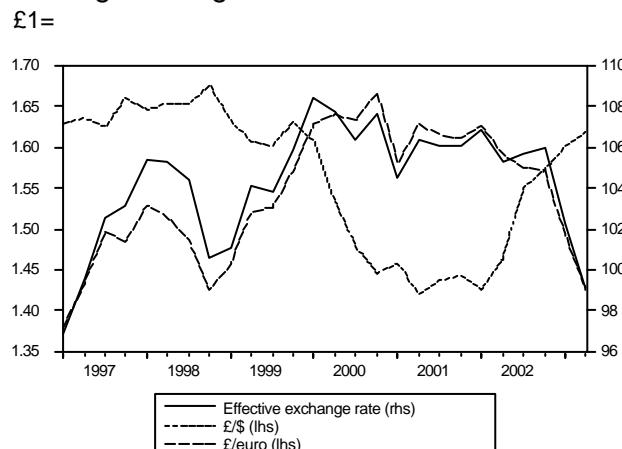

FTSE All-Share index, quarterly average

The first quarter had seen sterling fall sharply against the euro, a move which also dragged the trade weighted exchange rate down despite sterling appreciating against the US dollar. The second quarter saw a continuation of these trends, albeit at a somewhat slower pace. The pound fell by some 4.6 per cent against the euro but rose by just over 1 per cent against the dollar, a combination that resulted in a 3 per cent slide versus the effective exchange rate (chart 3).

Chart 3

Sterling exchange rates

Narrow money (M0) growth and broad money (M4) grew at similar rates in quarter two. Narrow money grew by 2.7 per cent in the quarter, slightly up from the 2.1 per cent growth rate in quarter one. Broad money grew by 2.1 per cent, compared with 0.8 per cent of the fourth quarter. These latest figures show broad and narrow money growing at rates close to 7 per cent on an annual basis.

Bank and building society lending figures, so-called M4 lending, remained robust in the second quarter. In quarter one 2003, annual growth rates of lending to financial (fincos) and private non-financial corporations (PNFCs) rose to 4.6 and 10.5 per cent respectively, above their rates in the previous quarter although admittedly still down on the peak rates of 19.2 per cent and 15.8 per cent respectively in quarter three 2000. Lending to the household sector that has been particularly strong of late and this continued to be the case in the second quarter. Annual growth in lending secured on dwellings rose by 10 per cent in the second quarter a figure similar to that of the previous quarter, while credit card lending went up by 5.7 per cent, an acceleration on the previous number.

The labour market

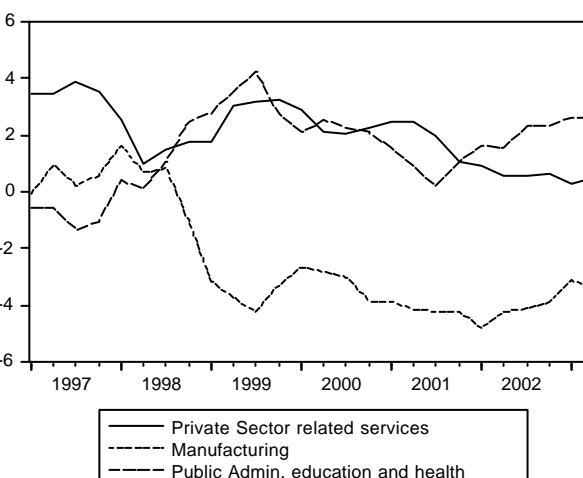

Overall the labour market in quarter two can still be described as stable at what is by recent historical standards a rather high level.

ILO unemployment was 5.0 per cent in the second quarter of 2003 down slightly from the previous three months, and the claimant count was 3.1 per cent, the same as in most quarters of the past two years. The Labour Force Survey employment rate was 74.7 per cent in quarter two, also up slightly from the previous quarter, and the highest level seen since 1990. The employer-based survey of jobs, workforce jobs, showed a rise of 0.2 per cent in the number of people employed, the same as in both the first quarters of 2003 and the fourth quarter of 2002.

Chart 4

Employment

Growth, quarter on a year ago

While there continues to be little change in any of the main aggregate totals, there have been some developments within the labour market. For one thing the recent trend of part-time employment to rise more quickly

than full-time employment continues. Over the twelve months to the second quarter part-time employment rose by 1.8 per cent, while full-time workers only went up by 0.5 per cent. Another development has been for self employment to rise at the expense of workers in employment. Again over the twelve months to the second quarter the former category rose by almost 7 per cent while the number of employees only went up by 0.1 per cent.

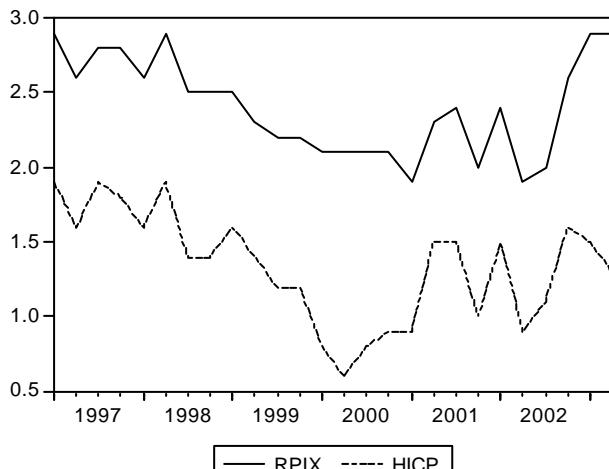

An industrial analysis of growth in workforce jobs shows that public sector job creation continued to be important in the second quarter. Chart 4 shows manufacturing employment fell again in the second quarter while employment in construction and services rose. Within services employment growth was most rapid in two areas, finance and business services and public administration and health, which contains most of the public sector jobs.

Earnings and prices

The picture for prices in the second quarter was little changed from earlier in the year. Inflation remained low by the standards of recent history but higher than they were twelve months ago. However, some of the forces that have recently caused inflation to edge upward were starting to ease as the quarter drew to a close.

RPIX inflation was steady at 2.9 per cent in the second quarter, the same figure as in the previous quarter. This meant that it remained above the target level of inflation for the second successive quarter. The main reason for this continued to be a rapid rate of house price inflation, but goods price falls that hitherto had been an important source of deflationary pressure in the economy were now also less of a factor. The inflation rate fell slightly to 2.8 per cent in the last month of the quarter but this still left it above the target rate of 2.5 per cent. The HICP fell slightly from 1.5 per cent in the last quarter of 2002 to 1.3 per cent. The key differences between the two indices continued to be rapid house price rises and differences in the method of calculation (chart 5).

Chart 5 Prices Growth, quarter on same quarter a year ago

Output prices rose by 1.2 per cent annually in the second quarter, a slight deceleration from the 1.9 per cent figure seen in the previous quarter. This represented a break in the slight upward trend to inflation that had been seen in the last five quarters but still left the rate well above its position of a year ago. Much of the recent rise and subsequent flattening out in inflation has been due to fluctuations in the oil price but underlying inflation has also gone up. Output prices excluding food, beverages tobacco and petroleum products were also up by 1.3 per cent in quarter 2, only slightly below the 1.4% rate of the first quarter and well above the 0.3 percent rate posted in the second quarter of last year. Input price has also accelerated in the early months of 2003. In the first quarter this rose by 5.0 per cent, although it fell back to 1.2 per cent in the second quarter as the oil price waned. Excluding food, beverages, tobacco and petroleum products input price inflation went up to 2.0 per cent from 0.6 per cent in the previous quarter suggesting that the pound's weakness may be having an impact on costs.

There was in contrast no sign of labour costs picking up, despite what on the face of it still seems to be a fairly tight labour market. Average earnings growth continued to remain subdued in the second quarter of 2003 as the headline growth figure fell to 3.1 per cent, down from 3.4 per cent in the previous quarter and 3.7 per cent in the back end of last year. A substantial gap has opened up between weaker private sector earnings growth of 2.6 per cent and the public sector where earnings are currently growing at a 5.1 per cent rate. However, the overall figure is comfortably below the growth of 4.5 per cent that the Bank of England regards as consistent with their inflation target.

OUTPUT AND SECTORAL ANALYSIS

GDP output data

Gross domestic product (GDP) in the second quarter of 2003 showed quarterly growth of 0.6 per cent, up from 0.2 per cent in the previous quarter. A change in the way that the GDP numbers have been calculated has meant that the numbers for previous quarter have changed somewhat compared with those that have been previously reported. GDP for the three years up until and including 2000 have been revised upward while 2002 as a whole has been revised downward to 1.7 per cent. However, while these revisions may have changed some of the detail in the numbers they fail to alter the basic fact that by the standards of recent UK economic history this is still an extremely muted cycle. Comparing the second quarter of 2003 with the same quarter a year ago shows an annual growth rate of 2.0 per cent. This was slightly above the rate in the previous quarter and less than 2 per cent lower than that seen in 2000 when the economy has recently been at its most robust.

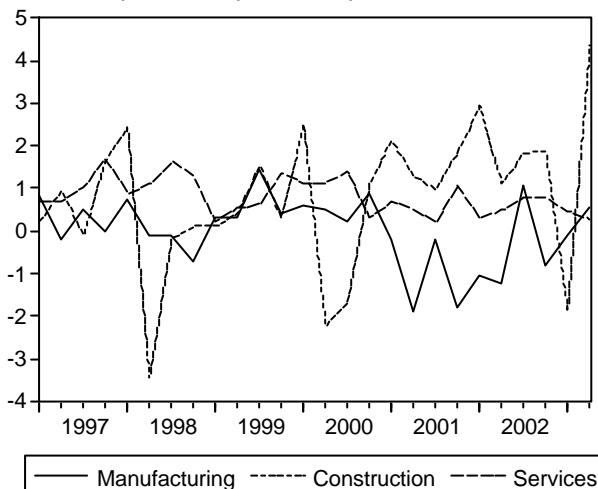

For the last few years economic growth has been maintained by strength in construction and services while manufacturing and energy production declined. The first half of 2003 however has seen a less clear cut picture. In the first quarter the economy was dragged down by a fall in construction output and by a slowing in the service sector, while industrial production fell at the same rate as the previous quarter. Service sector growth decelerated further in the second quarter, partly offset by a rebound in

industrial production. However, the bulk of the rebound in GDP between the first and second quarters was caused by a turnaround in construction output (chart 6).

Chart 6

Output

Growth, quarter on previous quarter

Construction output fluctuated significantly in the first half of 2003. In the first quarter output fell by 1.9 per cent, while in the second quarter it rebounded by 4.4 per cent. This fluctuation will have accounted for a difference in the GDP growth rate of around 0.3 per cent between the first and second quarters. The annual growth rate between the second quarters of 2003 and 2002 was 6.2 per cent, lower than the annual growth seen through last year. A sizeable part of the second quarter rebound seems to have been accounted for by higher repairs and maintenance by local authorities.

Manufacturing output rose by 0.5 per cent in the second quarter, following another small fall in activity in the first quarter. Prior to this the only quarter of positive growth in the previous two years was the third quarter of 2002, which was distorted upward by a rebound following the Jubilee break. The year on year rate of manufacturing output growth climbed back above zero in the second quarter having gradually risen from a low of -5 per cent in the first quarter of 2002. It appears then that the manufacturing sector is now dragging itself out of what has been a deep recession (chart 6). The turnaround seems to be led by motor vehicle production and investment goods output.

Service sector quarterly growth was 0.2 per cent in the second quarter of 2003, a slowdown from the 0.5 per cent growth rate in the first quarter and 0.8 per cent in the fourth quarter of last year (chart 6 again). Compared with the same quarter a year ago, annual growth was 2.2 per cent, slightly down on the 2.6 per cent annual growth rate of the first quarter. The quarterly slowdown was concentrated in the private sector and seems to have occurred in a number of industries. The output of business services after growing strongly in the first quarter fell slightly in the second quarter but the biggest decline in output occurred in transport and storage, which fell by over 1.5 per cent for the second quarter in a row. The most rapid growth rates in services by contrast were seen in wholesale and retail trade and in hotels and restaurants, both reflecting the rebound in consumer

spending and in other services.

Production growth in the mining and quarrying industries and electricity, gas and water supply industries continues to be volatile. Output in the electricity, gas and water supply industries rebounded in the second quarter after having fallen in the last two quarters, possibly due to a demand for air conditioning due to unseasonably hot weather. In contrast mining and oil and gas extraction continued to fall.

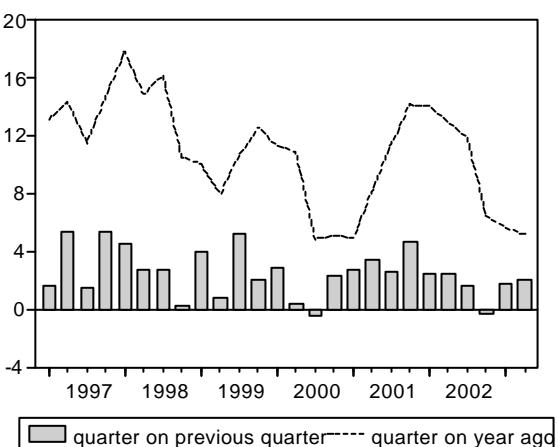

The household sector

Quarterly growth in household final consumption was 0.7 per cent in the second quarter of 2003, up from the small fall of 0.2 per cent seen in the previous quarter, which had been the weakest quarter for consumer spending for over five years. Growth compared with the same quarter a year ago was 2.4 per cent, a deceleration from the 2.8 per cent of the previous quarter. This rebound was echoed in retail sales growth of 1.5 per cent, however almost all of this was concentrated in June, suggesting that the pace of consumer spending growth picked up significantly through the quarter.

The breakdown of consumer spending patterns showed that the rebound was widely based. Spending on durable goods which had fallen particularly sharply in the first quarter, rose by 2.6 per cent in the second quarter, while purchases of both semi-durable goods and on services was also faster than in the first quarter. In contrast, spending on non-durable goods rose at a slower rate than in the first quarter.

Chart 7

Gross Consumer Lending

Consumer credit growth rose more strongly in the second quarter than in the previous six month period. Total gross consumer credit rose by 2.0 per cent in the second quarter, leaving the annual rate above 5 per cent (chart 7). Lending had previously been showing some signs of slowing over the previous two quarters after growing rapidly until the third quarter of 2002. A second quarter revival in measures of consumer confidence and external measures of retailing were also in line with the stronger spending numbers and together suggest that at least some of the earlier slowdown was temporary and may

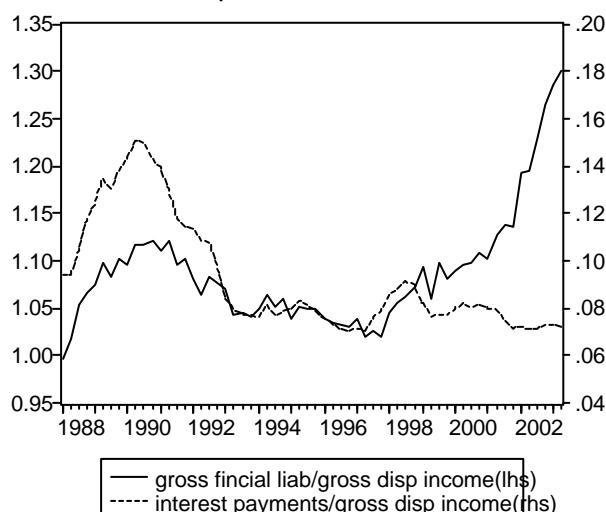

have been partly influenced by geo-political events.

The strength of consumer demand relative to total available household resources has led in recent years to the household sector becoming a net borrower. The process had been underway since 1997 although at first all that happened was that the sector became a smaller net lender. However, from 1999 onwards consumers have been net borrowers. The most important factor contributing to the initial move into net borrowing was a slower rate of increase in incomes due to big rises in collected taxes on income. These grew by 39 per cent between 1997 and 2000. This increase has been dominated by increased collection of income taxes due to the introduction of the self-assessment system, although the effect was exaggerated due to almost static figures for taxes collected between 1995 and 1997.

2001 saw a temporary return to net lending, as income from various sources increased. In 2002, however, net borrowing resumed and reached £8.7 billion for the year as a whole. This higher borrowing has continued into 2003. The increase in net borrowing in the latest two quarters was due to higher household investment, possibly linked to the housing market, and lower savings as consumption rose faster than incomes. The savings rate fell to 4.8 per cent in the second quarter of 2003, while households' share of gross national income rose slightly to 73.8 per cent., a slight rebound from the previous quarter but still low by historic standards. The rise in households' share of gross national income was at least partly due to a pick-up in dividend payments.

The financial account shows that the general movement from net lending to borrowing since 1992 has primarily been facilitated by increases in both secured and unsecured loans. This continues a trend in borrowing that has been underway for a long time. Bank of England data on stocks of household debt outstanding to banks and building societies shows household debt at unprecedented levels relative to disposable income.

Chart 8 Household debt position

While overall debt to banks and building societies has increased sharply, the overall financial wealth of the household sector also increased throughout the 1990s

(chart 8). However, since quarter four 2000 the previous rapid growth in the value of equity and life assurance reserves held as assets has gone into reverse, while the decline since the start of 2002, the last quarter aside, has been particularly steep. Net financial assets fell once again in the first quarter of 2003, but rebounded in the second quarter as the revival in the stock market boosted returns from mutual funds and life assurance reserves.

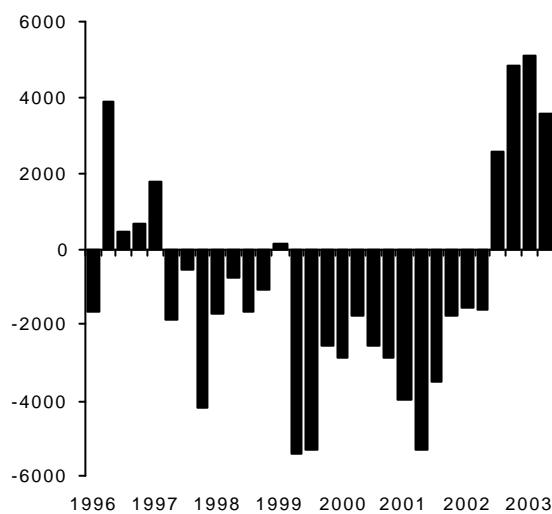

Private non-financial companies

Firms continue to rebuild their balance sheets by reducing investment and lowering dividends and this, along with higher profits, has allowed a return to net lending. Net lending resumed in the last quarter of 2001, and has increased in every quarter since then (chart 9). The latest quarter has seen a further net lending of £3.6 billion, as higher dividends were paid for by cuts in inventories and by a rise in investment grants. The PNFC's share of gross national income fell back to 11.6 per cent from 12.6 per cent in quarter one due to a smaller rise in the gross operating surplus and a fall in reinvested earnings on direct foreign investments.

Chart 9

PNFC net lending/borrowing

£ million

PNFCs fixed investment was up sharply in the second quarter rising, at current prices, by 5.1 per cent compared with an admittedly very weak first quarter number and by 2.5 per cent when compared with a year ago. These figures lend credence to the idea that investment spending is picking up after a period of pronounced weakness but other data paint a less rosy picture. Dis-aggregated investment figures by asset, which admittedly are for the business sector as a whole and so are not directly comparable, show that spending on equipment fell sharply in the second quarter and the investment were only held up by certain elements of construction investment. It may still be right to argue that investment spending has stabilised but it is premature as yet to call for an upturn.

Financial account activity was slightly subdued in the second quarter of 2003. On the asset side there was a pick up in loan activity and a fall in purchases of shares from the rest of the world. Meanwhile on the liability side

issuance of bonds remained high but a fall off in loans from abroad and the issuance of quoted shares remained negligible.

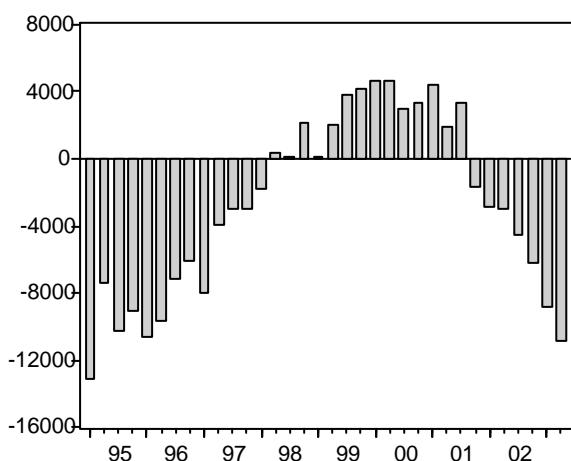

The PNFC sector debt levels remain high despite the sector surplus of recent quarters. The financial balance sheet shows the sector having net liabilities of £1,109 billion in the second quarter of 2003, a slight rise when compared with the previous quarter. The total value of assets rose during the quarter but was more than matched by a rise in liabilities driven principally by a rise in the value of UK shares held as liabilities.

Government

Government final consumption expenditure grew by 0.5 per cent in the second quarter of 2003, a much slower pace of growth than in the first quarter of the year. Much of this first quarter surge and the subsequent fall back was accounted for by a one-off rise in defence spending linked to the Iraqi conflict. However, some other areas of spending were also somewhat weaker. Growth compared with the same quarter a year ago was 3.9 per cent, a figure that is above the average annual growth rates of the last few years. Thus it seems as though the recent tendency, first seen in late 2001, for government spending to grow more quickly than GDP is still very much intact.

The combination of faster government expenditure growth alongside weaker revenues reflecting the more subdued economic activity has led to a deterioration in the public sector's finances. The public sector, a substantial net lender in the years 1998 to 2001 became a net borrower again in 2002. The net borrowing figure for 2002 was £16 billion, which compares with a net lending figure of £7.5 billion in the previous year. This deterioration has continued into 2003 and the second quarter saw a net borrowing figure of £9.7 billion, up from £7.4 billion in the first quarter (chart 10). The financial account shows that the issuance of sterling treasury bills and government securities has financed this return to net borrowing in 2002. The latest quarter has seen the issuance of £3.4 billion of government securities and £6.2 billion of sterling treasury bills.

Chart 10
Central Government net lending/borrowing
£ million

As a result of the previous prolonged surplus on the
10

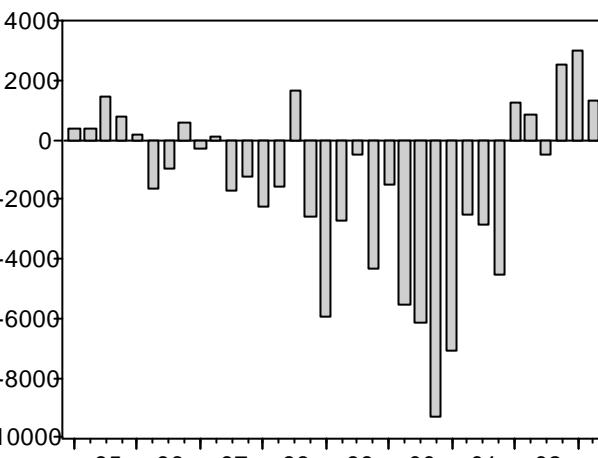

income and capital account, the Governments' balance sheet showed diminishing net liabilities from the end of 1998 to the first quarter of 2002. Since then net financial liabilities have risen to £349 billion, a similar level to that of 1999.

Financial corporations

Financial corporations were net lenders in 2002 for the first year since 1995. The net lending figure for the year as a whole was £ 4.2 billion, which compares with a net borrowing figure of £16.8 billion in 2001 and a peak of £22.5 billion in 2000. In the second quarter of 2003, financial corporations were net lenders to the tune of £1.4 billion, down from £3.0 billion in the first quarter, primarily due to increased pay outs including dividends (chart 11).

Chart 11

Financial corporations net lending/borrowing
£ million

The increase in net borrowing since 1996 was largely caused by a combination of sharply deteriorating gross trading profits and increasing investment. The reduction in net borrowing since 2000 has been driven by a degree of recovery in gross trading profits, from -£31.9 billion in 2001 to -£22.2 billion in 2002, higher employee social contributions, and lower employers social contributions and tax payments. The last two quarters reflect this, with much of the switch to net lending being due to an increase in gross operating surplus from around £6 billion in earlier quarters of 2002 to £9.1 billion in the first quarter and £8.5 billion in the second quarter of 2003. It is important to note the nature of financial corporations' activity, much of their income comes from the margins between interest receipts and payments on lending activity, as a consequence their gross trading profits are negative reflecting primarily the costs faced by the industry.

The sharp decline in gross trading profits between 1999 and 2001 was partly driven by increased staffing costs including high bonus payments in the banking and other financial institutions (mainly securities dealers), higher than anticipated costs in the insurance industry (mainly due to bad weather) and increased marketing expenses for securities dealers.

Financial account data, which dis-aggregates the

borrowing between the different types of financial institutions, reveals that the net borrowing position was driven by a variety of sectors. The banking sector was a net lender for every year between 1993 and 2001, was briefly a net borrower in 2001 before becoming a net lender again in 2002 and in the first quarter of 2003, before becoming a small net borrower again in the second quarter. 'Insurance and pension funds' became significant net borrowers between 1999 and 2001 before returning to net lending in 2002. The first quarter of 2003 also saw substantial net lending but the figure for the second quarter was much smaller. 'Other financial intermediaries' who borrowed large amounts from 1994 onward, borrowed less in 2001 and in 2002, the net borrowing figure rose substantially in the first quarter of 2003 but the sector became a net lender in the second quarter. Consequently the reduction in net borrowing in 2002 was largely driven by 'insurance and pension funds' and the net borrowing figure for the last quarter was principally due to 'Other financial intermediaries' and to a lesser extent to 'insurance and pension funds'. 'Insurance and pension funds' have increased their holdings of bonds and British government securities while reducing their holdings of UK shares. The increase in banks lending has been particularly notable in foreign currency loans, which has occurred at the same time as foreign currency deposits with banks have risen.

Looking at the overall net stock position on the balance sheet, net financial liabilities of the financial sector recovered sharply until this year, after a prolonged deterioration that peaked at £470 billion in 2000. However, the second quarter of 2003 saw a rise in net financial liabilities to £340 billion. The deterioration was due to rise in a number of liabilities including loans from the rest of the world and quoted shares. The latter particularly affects holdings of net equity of households in life assurance recorded as a liability for the insurance and pension fund sector and OFIs' mutual fund equity liabilities. Chart 13 decomposes the overall balance sheet although it should be noted that an element of the figure for OFI's involves an adjustment for the coherence of the accounts as a whole.

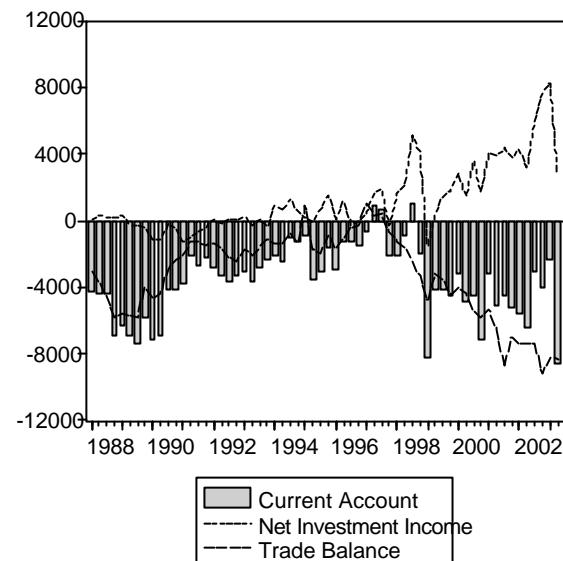

The Balance of Payments

The UK current account was in substantial deficit in the second quarter of 2003 and the first quarter previously estimated to be in surplus was revised to also show a deficit. The deficit for the second quarter was £ 8.6 billion, compared with a deficit of £2.3 billion for the first quarter and £19 billion for 2002 as a whole. The data has now been revised to take into account missing trader intra-community fraud (MTIC). This is fraud by traders who import goods, registered for VAT, from other EU countries but then fail to pay the VAT. As data on imports from EU are collected from VAT receipts these would consequently be unrecorded and the level of imports has now been adjusted to reflect that fact. The first quarter number has moved into deficit partly because of this upward adjustment of imports but also because income from foreign direct investment had previously been overestimated.

The rise in the deficit between the first and second quarter was primarily due to a fall in net investment income, both from direct and portfolio investment. The trade balance in

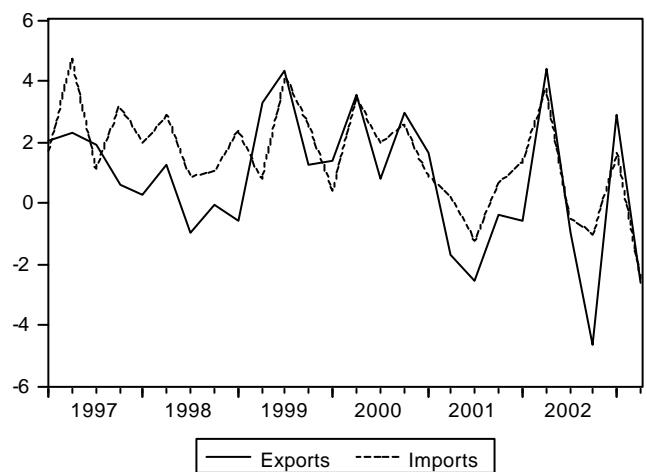

both goods and services was roughly unchanged between the first and second quarters. The deficit in trade in goods improved significantly between the final quarter of last year and the first quarter of this, primarily due to rise in exports to countries outside the EU. The impact of this though was offset by a fall in the trade in services surplus (chart 12).

Chart 12
Balance of payments
£ million

The movements of the trade deficit somewhat mask important movements in the flows of both imports and exports. Chart 13 shows that the recent pattern of movements in both imports and exports of goods in constant price terms has been erratic.

Chart 13
Import & export volumes
annual change

The clampdown by customs on MTIC fraud will have affected recent export numbers and so make historical comparisons difficult at present. The numbers suggest that exports example picked up sharply in the first quarter of 2003 after declining in the previous two quarters, but then fell back again in the second quarter but some of

that second quarter fall will have been due to the clampdown. Imports also fell in the first quarter but again for goods some of this will reflect the effects of the MTIC adjustment.

Overall, the persistence of the current account deficit since 1984 has led to a deterioration in the UK's international investment position (IIP) with the rest of the world. The net asset/liability balance turned negative in 1995, peaked at net liabilities of £115 billion in 1998, and since then has recovered until in the second quarter of 2003 the UK had net assets of £22.4 billion. This recovery was partly due to re-valuations of overseas direct investment assets held in the UK that have not been matched with similar revaluation to UK assets overseas. Part of the effect on the IIP may have been due to timing of these re-valuations.

UK ECONOMIC ACCOUNTS: THE SECOND QUARTER OF 2003

This article presents the UK national accounts for the second quarter of 2003. It refers to seasonally adjusted data. Latest estimates were released on 30 September 2003.

GROSS DOMESTIC PRODUCT

Real and nominal GDP at market prices (Table A1)

Latest figures show that the chained volume measure of gross domestic product (GDP) rose by 0.6 per cent (revised up from 0.3 per cent) in the second quarter of 2003 compared with the previous quarter. The level of GDP is 2.0 per cent higher than the second quarter of 2002.

Between quarter one and quarter two 2003:

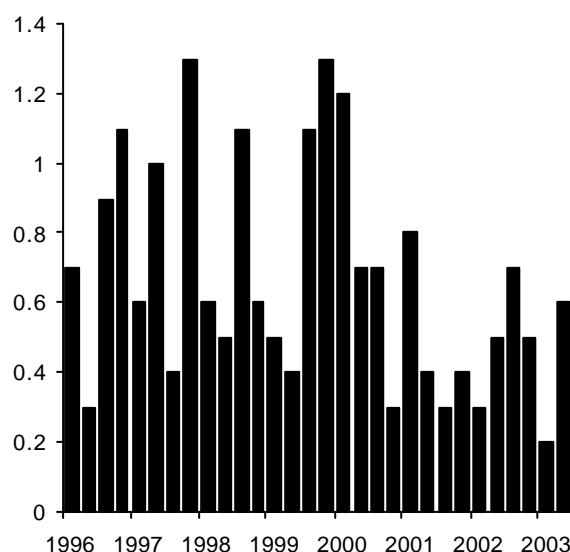

The volume of output in the production industries rose by 0.2 per cent, within which manufacturing rose by 0.5 per cent.

Construction output rose by 4.4 per cent over the quarter and the output of the service industries increased by 0.2 per cent (Table A4).

Gross national income at current market prices fell by 0.8 per cent during the second quarter of 2003.

Chart GDP1

GDP chained volume measure
Percentage change quarter on quarter
seasonally adjusted

Expenditure components of GDP (Tables A1, A2, A7, A8, A9, and A10)

Gross domestic expenditure rose by 0.5 per cent over the quarter.

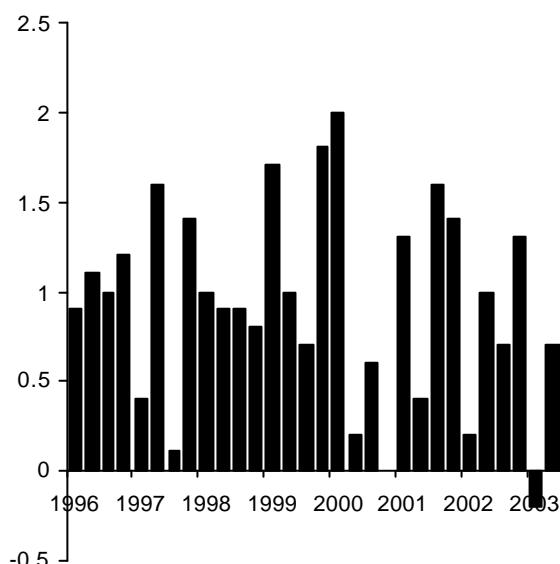

The GDP deflator is now 3.1 per cent higher than the second quarter of 2002.

Household final consumption expenditure (Table A7)

Household expenditure recovered from the fall in the first quarter of this year, rising by 0.7 per cent in 2003 Q2, with strong growth in expenditure on clothing and footwear and household goods and services.

Chart GDP2

Household final consumption expenditure
chained volume measure
Percentage change quarter on quarter
seasonally adjusted

Government final consumption expenditure

Government final consumption expenditure rose by 0.5 per cent in the latest quarter as a result of increases in local authority spending. Defence expenditure fell from the high levels seen in the first quarter although the change over the second quarter of 2002 remains high.

Gross fixed capital formation (Table A8)

Gross fixed capital formation rose by 1.2 per cent in the latest quarter as increased investment in dwellings and other buildings and structures was partially offset by falls in machinery and equipment. Business investment rose by 2.0 per cent over the quarter, whereas general government investment fell by 3.6 per cent.

Changes in inventories (Table A9)

Inventories fell by £0.6bn in the latest quarter with decreased inventories of materials and fuel held by the manufacturing sector. In contrast, there was a rise in the stocks held by the retailing sector.

Exports and Imports of goods and services (Table A10)

Exports of goods and services fell by 2.6 per cent over the quarter following a rise of 2.9 per cent in the first quarter. Falls of 2.6 per cent were recorded for both the exports of goods and of services.

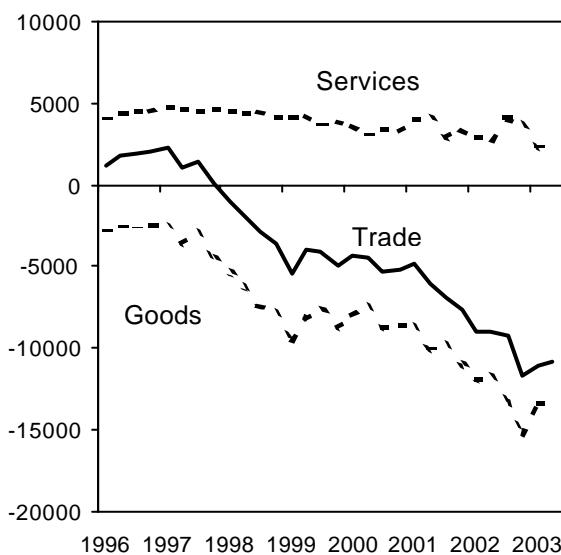

Imports of goods and services fell by 2.5 per cent over the quarter, due to a fall of 1.9 per cent in the imports of goods and a fall of 4.7 per cent in the imports of services. The imports of goods data used in the national accounts have been adjusted to take account of VAT missing trade intra-community fraud (MTIC). This is the first national accounts dataset to be published including these adjustments (see background note on page 29).

Chart GDP3

Trade balances chained volume measure

£ million

seasonally adjusted

GDP analysed by output categories at chained volume measures (Table A4)

Between quarters one and two of 2003, the output of the agriculture, fisheries and forestry sector rose by 0.6 per cent.

Output of the production industries rose by 0.2 per cent over the second quarter. Growth of 0.5 per cent in the manufacturing sector was driven by increases in machinery and equipment (including transport equipment). The supply of electricity, gas and water rose by 1.2 per cent whereas the output of mining and quarrying fell by 2.2 per cent.

Following a large fall in the first quarter of 2003,

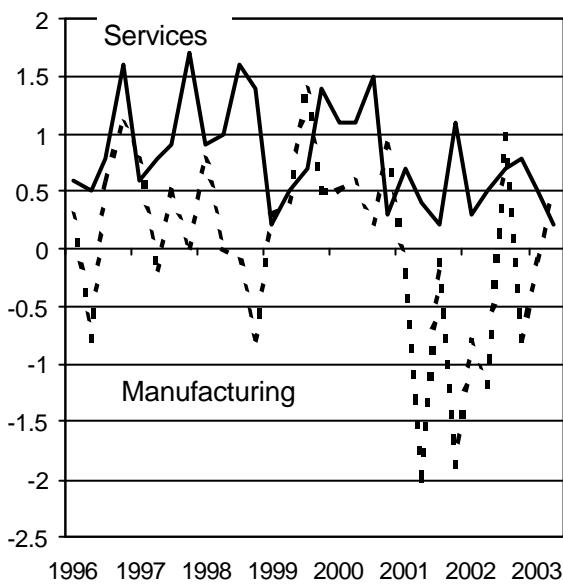

construction output showed strong growth of 4.4 per cent in the second quarter, driven by repairs and maintenance (public and private) and public new work.

Output of the service industries rose by 0.2 per cent in the second quarter, compared to a rise of 0.5 per cent in the previous quarter. Distribution rose by 0.7 per cent and the output of hotels and restaurants rose by 1.3 per cent over the quarter. A fall of 0.5 per cent was recorded in the transport, storage and communications sector, as a drop in transport activity was partially offset by a rise in the telecommunications industry. Government and other services rose by 0.6 per cent, with rises in education and radio and television services.

Chart GDP4

Manufacturing and services gross value added
chained volume measure

Percentage change quarter on quarter
seasonally adjusted

GDP analysed by income categories at current prices (Tables A1, A3)

GDP at current market prices rose by 1.2 per cent over the quarter.

Compensation of employees rose by 0.8 per cent.

The gross operating surplus of corporations rose by 1.7 per cent; rises were recorded for both public and private non-financial corporations (including the alignment adjustment) of 9.4 per cent and 3.1 per cent respectively. The gross operating surplus of financial corporations, which tends to be erratic, fell by 7.4 per cent.

Taxes on production less subsidies rose by 0.4 per cent over the quarter.

REVISIONS ANALYSIS

GDP and components (previously published on 22 August 2003)

For this release data feeding in to GDP have been revised back to the first quarter of 1948.

GDP and components (previously published on 22 August 2003)

2002

The 2002 annual growth rate for real GDP has been revised down to 1.7 per cent (from 1.9 per cent published last month).

On the production side, upward revisions in agriculture and all the main categories of production (revised up from -3.5 per cent to -2.7 per cent) have been offset by downward revisions across the service industries (revised down from 2.6 per cent to 2.3 per cent), in particular government and other services, and business services.

The downward revision to the expenditure measure of GDP is driven by downward revisions to the final consumption expenditure of both households and government, and upward revisions to the imports of goods resulting from the adjustments for VAT missing trader intra-community fraud (MTIC). Offsetting these downward effects, gross fixed capital formation has been revised upwards from -1.0 per cent to 1.8 per cent, following upward revisions to business investment in plant and machinery.

On the income side, the downward revision to growth of GDP at current market prices of 0.1 per cent is driven by a downward revision to the gross operating surplus of private non-financial corporations now estimated to have grown by 2.3 per cent compared to 3.4 per cent previously published.

2003 Q1

The latest quarterly growth rate for the first quarter of 2003, in chained volume terms, has been revised up to 0.2 per cent, from 0.1 per cent published last month.

This upward revision of 0.1 per cent reflects higher estimates for business services, including real estate, renting and computer related activities.

2003 Q2

The previously published growth rate for GDP in the second quarter of 2003 has been revised up from 0.3 per cent to 0.6 per cent.

This large upward revision is due to higher estimates for construction output reflecting revised data received from the Department of Trade and Industry. Construction output is now estimated to have grown by 4.4 per cent as opposed to 0.8 per cent previously published. Manufacturing output has been revised up by 0.4 per cent as a result of higher estimates for the transport equipment

and chemicals industries. The output of services, on the other hand, has been revised downwards by 0.1 per cent.

A downward revision to the quarterly growth in imports of goods is the main contributor to the upward revision to GDP from the expenditure side. This downward revision of 3.5 per cent is mainly due to the VAT MTIC adjustment to imports of goods in 2003 Q1 being much larger than the adjustment in the second quarter. Gross fixed capital formation has been revised up by 1.7 per cent due to increased estimates of investment in dwellings and other buildings and structures. Household expenditure estimates have been revised downwards by 0.7 per cent.

On the income side the current price measure of GDP has been revised upwards by 0.2 per cent driven by an upward revision of 0.4 per cent to compensation of employees.

Balance of payments

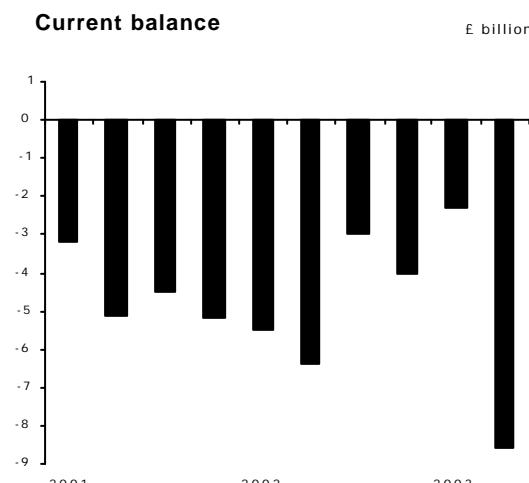

The current account showed a record deficit of £8.6 billion in the second quarter of 2003. This compares with a revised deficit of £2.3 billion in the first quarter of 2003.

A deficit of £5.9 billion was recorded with EU countries compared with a deficit of £3.6 billion in the previous quarter.

The surplus on investment income fell sharply to £3.0 billion in the second quarter of 2003 from £8.3 billion in the first quarter.

Total trade in goods and services was broadly unchanged from the first quarter of 2003, showing a deficit of £8.3 billion in the second quarter.

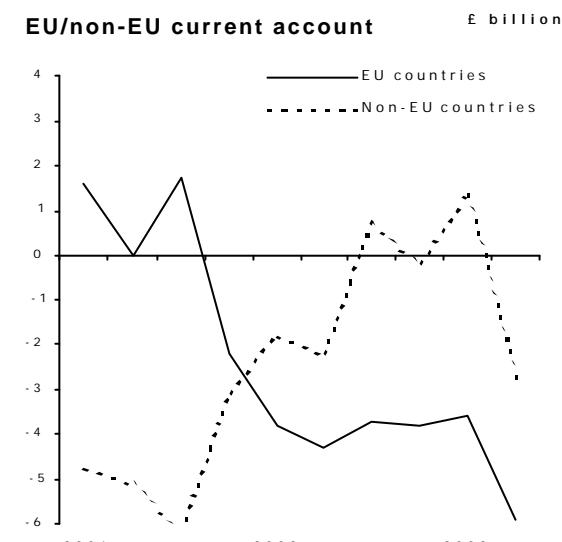

Data in this release are consistent with the electronic dataset for Pink Book 2003 which is available from today. Data have been revised from the first quarter of 1996. As a result, the current account deficit has narrowed between 1996 and 1998, but increased in all years from 1999 onwards. The current balance for 2002 now shows a deficit of £19.0 billion.

Current account with EU and non-EU countries (Table B6)

The current account deficit with **EU countries** increased to £5.9 billion in the second quarter of 2003 from a deficit of £3.6 billion in the first quarter. The higher deficit was driven by a marked fall in the income surplus, down from the record level recorded in the first quarter to £2.5 billion in the second quarter, together with an increased deficit on current transfers.

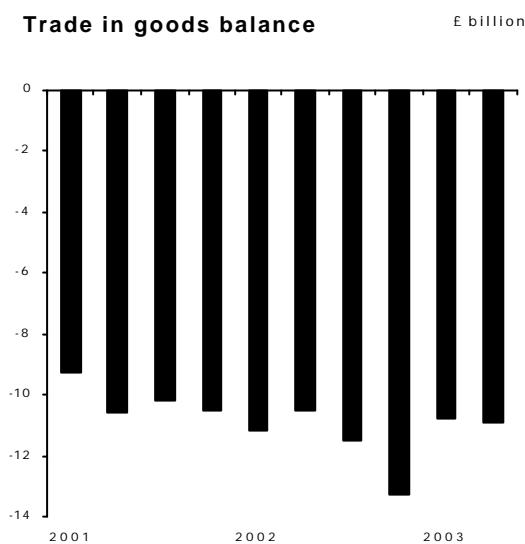

The current account surplus with **non-EU countries** recorded in the first quarter was followed by a deficit of £2.7 billion in the second quarter. This was mainly due to a large fall in the income surplus, but also to a widening trade deficit and increased deficit on current transfers.

Trade in Goods (Table B2)

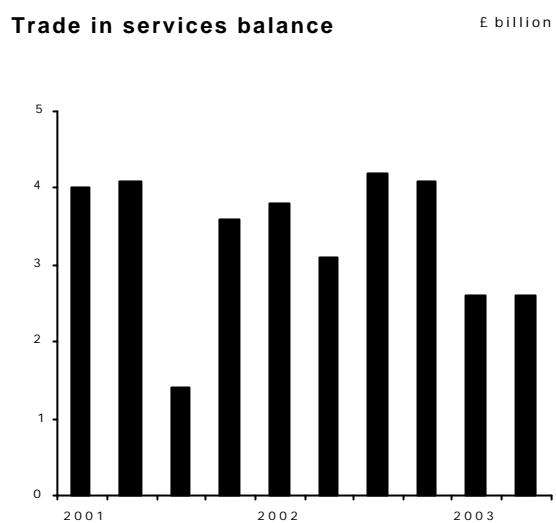

The deficit on trade in goods in the second quarter of 2003 was £10.9 billion compared with a deficit of £10.8 billion in the first quarter of 2003. Exports fell by £1.1 billion while imports fell by £1.0 billion. Exports to EU countries fell by £1.4 billion and imports from the EU fell by £1.3 bil-

lion. Exports to non-EU countries rose by £0.3 billion while imports from those countries rose by £0.4 billion. The fall in both exports and imports was concentrated in exports and imports of capital goods.

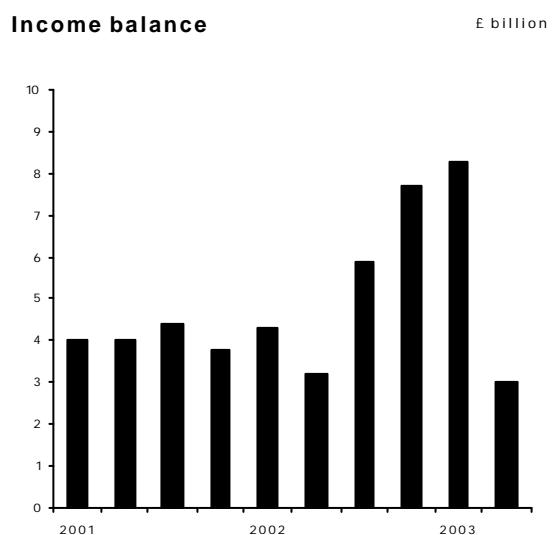

Trade in Services (Table B3)

The **trade in services** surplus stood at £2.6 billion for the second quarter, virtually unchanged from the first quarter. Exports decreased by £0.5 billion from the first quarter to £20.6 billion, due to falls in exports of other business services and insurance. Imports also fell by £0.5 billion, to £17.8 billion, reflecting lower imports of travel and transportation services.

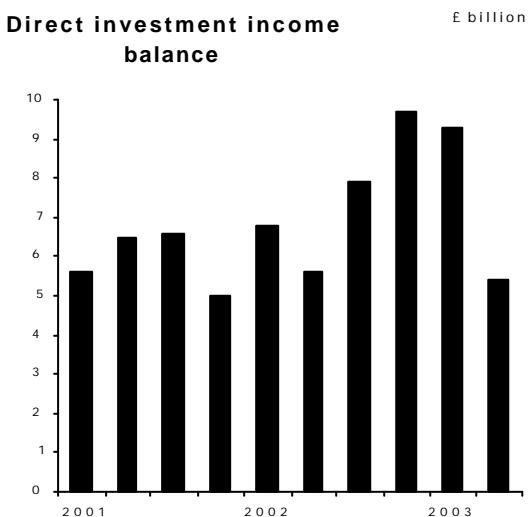

Income (Table B4)

The surplus on **income** in the second quarter of 2003 was £3.0 billion, down from the record surplus of £8.3 billion in the first quarter. Income credits fell by £2.7 billion in the second quarter to £30.1 billion, mainly reflecting a fall in earnings on direct investment abroad. Earnings on portfolio investment were also down, although partially offset by a small rise in earnings on other investment abroad. Income debits rose by £2.5 billion in the second quarter, to £27.1 billion. Debits on foreign direct investment in the UK rose by £1.4 billion, whilst debits on portfolio and other investment rose by £0.5 and £0.6 billion respectively.

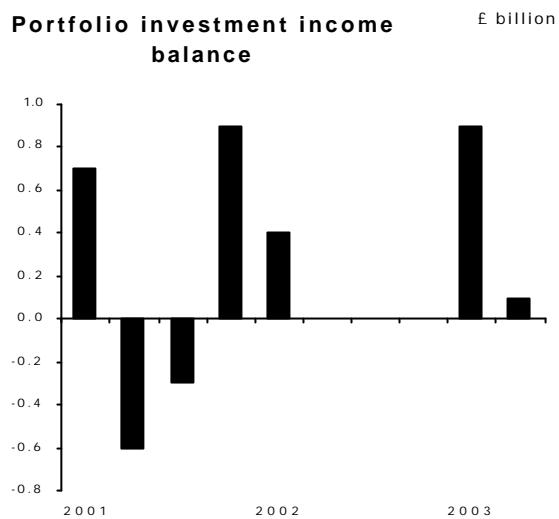

The **compensation of employees**' account was broadly in balance, the same as in the previous quarter.

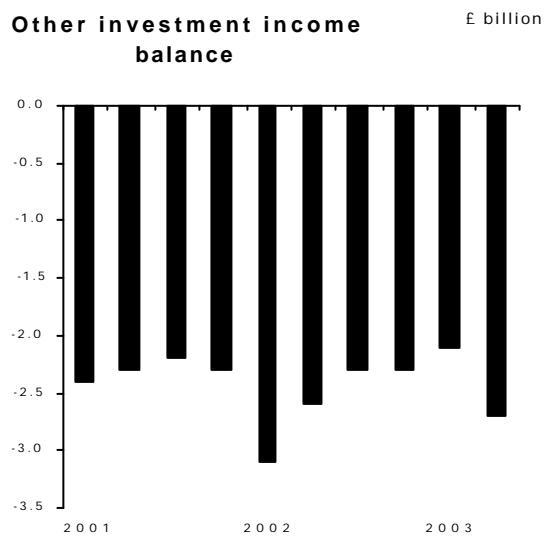

The surplus on **direct investment** income was £5.4 billion in the second quarter of 2003, a decrease of £4.0 billion compared with the first quarter 2003. Credits were £12.3 billion in the second quarter of 2003 compared with £14.9 billion in the previous quarter, principally reflecting lower profits of UK owned oil companies. Debits were £7.0 billion in the second quarter of 2003, an increase of £1.4 billion on the previous quarter due mainly to higher earnings of foreign-owned banks and insurance companies in the UK.

Portfolio investment income recorded a surplus of £0.1 billion in the second quarter of 2003, down from £0.9 billion in the first quarter. UK earnings on holdings of foreign issued securities fell slightly to £7.9 billion. Foreign earnings on portfolio investment in the UK in the second quarter increased to £7.8 billion, predominantly due to higher earnings on equity securities.

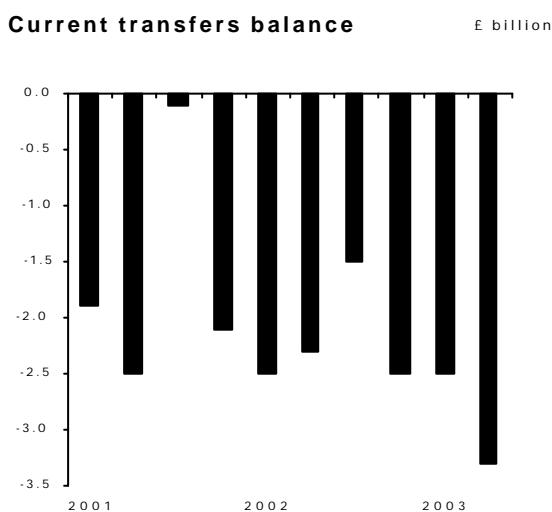

The deficit on **other investment** income increased to £2.7 billion in the second quarter, from £2.1 billion in the first quarter. Earnings on other investment abroad rose £0.1 billion to £9.4 billion in the second quarter, largely due to higher earnings on banks' deposits abroad. Earnings on other investment in the UK rose by £0.6 billion to £12.1 billion in the latest quarter, due to higher interest payments on borrowing by securities dealers and higher bank interest payments on foreign currency deposits.

Income on **reserve assets** was £0.2 billion in the second quarter, unchanged from the income earned in the previous quarter.

Current transfers (Table B5)

The deficit on **current transfers** increased to £3.3 billion in the second quarter. Credits remained unchanged from the previous quarter at £3.0 billion. Debits rose by £0.8 billion in the second quarter to £6.3 billion, reflecting increases in GNP fourth resource contributions and other payments within central government. It should be noted that the quarterly path of net contributions to EU institutions is erratic.

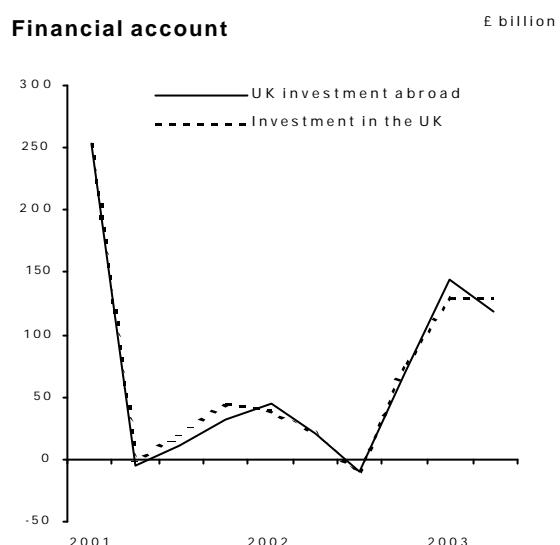

Capital Account (Table B7)

The surplus on the **capital account** increased by £0.1 billion in the second quarter to £0.2 billion.

Financial Account (Table 12)

The **financial account** showed a net inflow (i.e. inward investment) of £11.2 billion in the second quarter compared with a net outflow of £14.6 billion in the first quarter. There was net investment abroad of £118.4 billion and net investment in the UK of £129.6 billion in the second quarter.

Direct investment abroad showed net investment of £5.4 billion in the second quarter of 2003 compared with net investment of £32.8 billion recorded in the previous quarter. Reinvested earnings showed disinvestment of £3.2 billion in the second quarter compared with investment of £10.4 billion in the previous quarter. Transactions in equity capital fell to £1.8 billion from £11.0 billion in the previous quarter. Other capital transactions fell by £4.6 billion, to £6.7 billion in the second quarter. By sector, oil companies and other financial intermediaries were the main contributors to the lower direct investment abroad in the latest quarter.

Foreign direct investment in the UK was £3.8 billion in the second quarter of 2003 compared with investment of £2.2 billion in the first quarter. Equity capital moved from investment of £0.1 billion in the first quarter of 2003 to disinvestment

of £0.2 billion in the second quarter. Reinvested earnings rose from £3.4 billion in the first quarter 2003 to £3.5 billion in the second quarter. There was investment of £0.5 billion in other capital transactions, following disinvestment of £1.3 billion in the first quarter of 2003. Investment in the UK in the second quarter of 2003 was higher than in the first quarter in both the financial and non-financial sectors.

Direct investment acquisitions and disposals in the second quarter of 2003 included :

Outward acquisitions (of foreign companies):

The purchase of M.I.M. Holdings Ltd by Xstrata Plc for a publicly reported £1.3 billion.

Outward disposals (of foreign companies):

The sale of their Australasian businesses by Royal and Sun Alliance Insurance Group Plc for a publicly reported £0.5 billion.

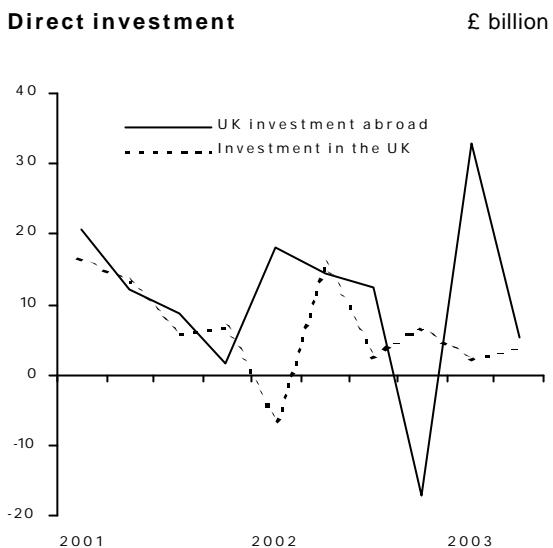

Inward acquisitions (of UK companies):

The purchase of the First National group of Abbey National Plc by the GE Consumer Credit group of the General Electric Company for a publicly reported £0.8 billion.

Inward disposals (of UK companies):

There were no significant disposals during the quarter.

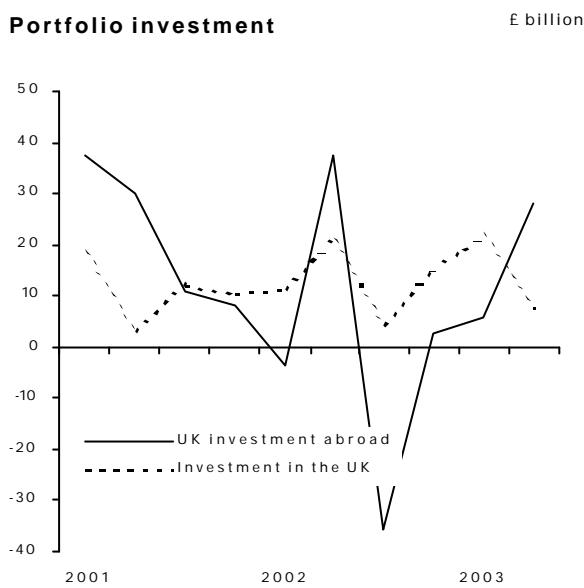

Note: The figures used are those reported in the financial press

Portfolio investment abroad showed investment of £27.9 billion in the second quarter, compared with investment of £5.7 billion in the previous quarter. The increase in investment was primarily due to purchases of equity securities of £26.3 billion, primarily by UK banks and securities dealers. Within an overall investment of £1.6 billion in debt securities in the second quarter, banks purchased £12.5 billion of bonds and notes, which was partially offset by disinvestment of £7.1 billion by securities dealers. Transactions in money market instruments were broadly neutral, following net purchases of £13.2 billion in the previous quarter.

Portfolio investment in the UK showed investment of £7.7 billion in the second quarter compared with investment of £22.0 billion in quarter one. The high level of equity purchases in the first quarter was largely due to FDI acquisitions funded by the issue of share capital. Investment in quarter two has returned to more usual levels.

Financial derivatives showed net settlement receipts from interest rate swaps contracts of £2.3 billion in the second quarter, compared with net settlement payments of £7.7 billion in the previous quarter.

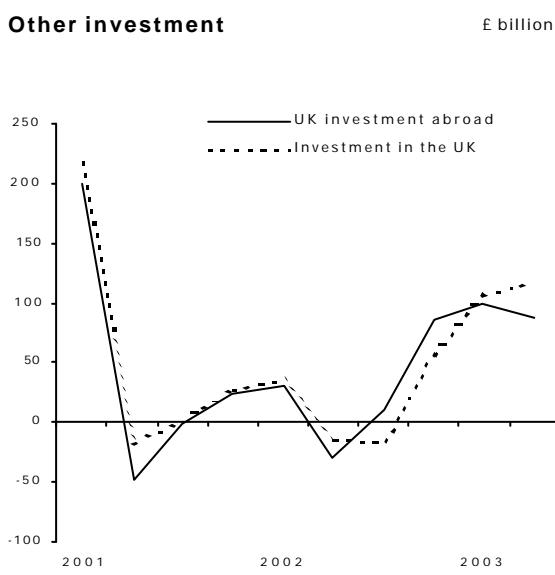

Other investment abroad showed investment of £88.1 billion in the second quarter of 2003, compared with investment of £99.4 billion in the first quarter. Banks foreign lending decreased by £39.3 billion to £3.6 billion in the second quarter, whilst total UK deposits abroad increased by £26.5 billion to £84.0 billion.

deposits with UK banks both rose in the latest period.

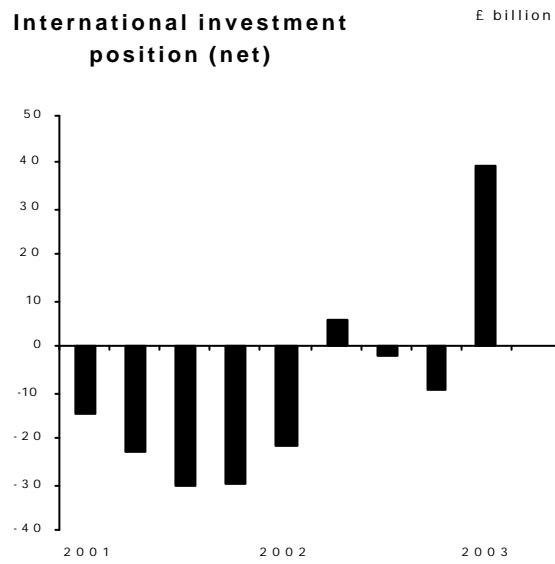

Reserve assets showed net disinvestment of £0.6 billion in the first quarter following net disinvestment of £1.6 billion in the previous quarter.

International Investment Position (Table B14)

The **international investment position** showed net external assets (i.e. assets exceed liabilities) of £24.8 billion at the end of the second quarter, compared with net external assets of £39.1 billion at the end of the first quarter. UK assets abroad rose by £124.7 billion from the end of the previous quarter to £3549.6 billion in the latest period. UK liabilities rose by £139.1 billion from the end of the first quarter to reach £3524.8 billion in quarter two. The changes to balance sheets are broadly in line with the net investment flows recorded in the financial account.

Other investment in the UK showed investment of £118.0 billion in the second quarter, compared with investment of £105.2 billion in the previous quarter. Lending to UK residents and

Note: This publication includes a new table (B20) showing an external debt presentation of the International Investment Position.

BACKGROUND NOTES

This quarter

1. This release includes data available at 12 September 2003.
2. Figures have been revised from the first quarter of 1996 although the most significant changes have been introduced from 2001. These changes are summarised in the table below.

The annual and 2003Q1 revisions by current balance component are as follows:

	£ billion				
	99	00	01	02	03q1
Goods	-1.7	-2.7	-7.1	-11.3	-1.8
Services	1.3	1.6	1.7	1.0	-0.2
Income	-0.2	0.4	-0.2	0.5	-2.8
Transfers	-0.7	0.3	0.1	0.5	0.0

Current balance

-1.2 -0.4 - 5.6 -9.3 -4.8

Trade in goods - revisions mainly reflect the impact of VAT missing trader intra-Community fraud. See Note 3 below.

Trade in services - exports and imports of services have been revised up in all years since 1996. These changes are mainly due to the expanded sample of the annual International Trade in Services (ITIS) survey introduced in 2002.

Income - the main change to the income account is in the first quarter of 2003, which includes corrected contributor data for direct investment inquiries.

Transfers - revisions mainly reflect the move to accruals recording for net contributions to EU institutions

3. Import figures for Trade in Goods now include adjustments to allow for the impact of VAT Missing Trader Intra-Community (MTIC) fraud. The adjustments were introduced for the first time in the UK Trade

May 2003 First Release published on 9 July. The adjustments are added to the EU import estimates derived from Intrastat returns. An article explaining the fraud and the impact on the trade figures was also published on 9 July (www.statistics.gov.uk/articles/economic_trends/ETAug03Ruffles.pdf).

International convention determines that the treatment of the impact is to adjust imports upwards by the relevant amounts. However users may wish to interpret short-term movements in exports and imports excluding completely this fraudulent activity, and for this purpose an analysis of the export and import figures with the MTIC adjustments excluded has been produced.

The following table shows the quarterly values of imports and exports of goods at current prices excluding the impact of MTIC fraud:

	Total Exports less MTIC £b	Total Imports less MTIC £b
99 Q1	38.8	46.7
Q2	40.0	46.6
Q3	43.1	49.7
Q4	42.6	50.5
00 Q1	43.9	51.4
Q2	46.4	53.8
Q3	46.6	55.5
Q4	48.1	57.4
01 Q1	48.1	57.4
Q2	46.6	57.2
Q3	44.6	54.8
Q4	43.6	54.2
02 Q1	43.0	54.1
Q2	45.6	56.1
Q3	44.3	55.8
Q4	42.3	55.5
03 Q1	45.1	55.8
Q2	45.6	56.5

These estimates are liable to revision as later information becomes available. The Table will be revised and updated as necessary in future Background Notes.

The revisions to trade in goods relate only to part of the 'carousel' version of VAT missing trader intra-Community (MTIC) fraud. This fraud leads to under recording of imports as fraudsters import goods, which they then sell on before disappearing without paying VAT on that sale. The goods are eventually exported back to the EU. Such exports are declared so VAT can be claimed back. Because intra-EU trade statistics are collected using the VAT system, these exports are therefore already reflected in the UK's trade in goods statistics.

4. This release is consistent with the ONS publications United Kingdom National Accounts - The Blue Book and UK Balance of Payments - The Pink Book. The Blue and Pink Books will be published on the National Statistics website on 24 October 2003 and in hard copy on 21 November 2003.

SECTOR AND FINANCIAL ACCOUNTS: THE SECOND QUARTER OF 2003

This article presents the UK sector and financial accounts for the second quarter of 2003. Latest estimates were released on 30 September 2003.

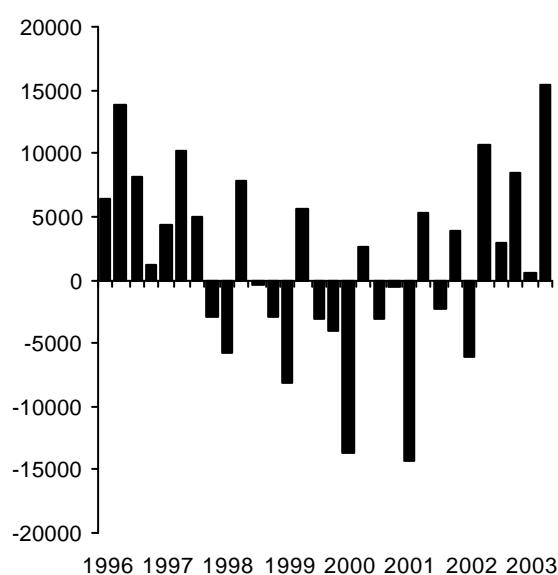

THE PUBLIC SECTOR

Sector position (non seasonally adjusted)

The public sector showed net borrowing of £15.4 billion in the second quarter of 2003. Within this, central government showed net borrowing of £17.3 billion, local government net lending of £2.1 billion and public corporations net borrowing of £0.3 billion. This compares with net lending for the public sector as a whole of £10.6 billion in the second quarter of 2002. It is the highest public sector net borrowing in a second quarter since 1993. (see chart SA1).

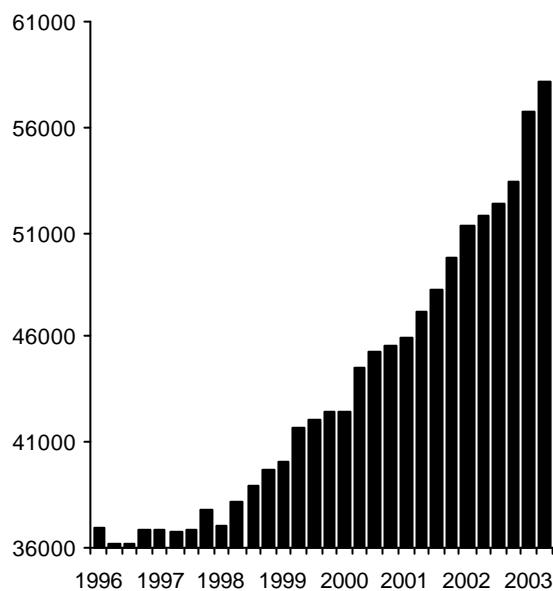

The net borrowing in the second quarter partially reflects increased government current expenditure with receipts showing less rapid growth - current expenditure grew by 10.7 per cent from £95.6 billion in the second quarter of 2002 to £105.9 billion in the second quarter of 2003, while current receipts grew by 8.0 per cent from £88.6 billion to £95.7 billion in the same period. Public sector net investment also grew from £1.2 billion in the second quarter of 2002 to £2.6 billion in the second quarter of 2003. The main component of this increase was central government capital grants to the private sector, which grew from £1.5 billion in the second quarter of 2002 to £2.8 billion in the second quarter of 2003 reflecting planned increases in expenditure on transport.

Chart SA1
Public Sector Net Borrowing
£ million
non-seasonally adjusted

The main component of the increase in current spending was General Government consumption expenditure which was £58.1 billion in the second quarter of 2003 compared to £51.8 billion in the second quarter of the previous year. The rise in expenditure reflects the government's plans for increased spending in targeted areas, as well as some effect both from the war and the continuing military presence in Iraq. General government net social benefits expenditure grew from £31.2 billion in the second quarter of 2002 to £33.6 billion in the second quarter of 2003. The largest component of this increase was the payment of retirement pensions, which rose from £11.0 billion in second quarter of 2002 to £11.5 billion in the second quarter of 2003. The increase also partly reflects the introduction of the new tax credit system in 2003/04, particularly the new child tax credit.

Chart SA2
Government final consumption expenditure
£ million
non-seasonally adjusted

Receipts from national insurance contributions rose by 14.8 per cent from £14.6 billion in the second quarter of 2002 to £17.0 billion in the second quarter of 2003 as a result of the rise in the contribution rate, announced in the 2002 Budget. Receipts from taxes on products and production were also up in the second quarter of 2003, £37.5 billion against £34.6 billion in the second quarter of 2002. The largest component of this rise was higher VAT receipts, which contributed £2.5 billion to this increase. This has partly been attributed to the success of anti-fraud measures. Receipts from taxes on income increased from £28.8 billion in the second quarter of 2002 to £30.1 billion in the second quarter of this year - mainly from taxes paid by households. (see chart SA3).

THE HOUSEHOLD SECTOR

Government partly funded the net borrowing in the second quarter of 2003 through net issues of gilts worth £3.4 billion and net issues of Treasury Bills worth £6.2 billion.

Chart SA3

Tax receipts on production

Sector position (seasonally adjusted)

Saving ratio:

The saving ratio was 4.8 per cent in the second quarter of 2003, which is down slightly on the ratio of 5.0 per cent in 2003 quarter one, which has been revised up from 4.6 per cent. Although the ratio for the current quarter is down on the previous quarter, it is still higher than 2002 quarter four. 2002 has been revised up from 4.6 per cent to 5.0 per cent. (See chart SA5).

Chart SA5

Household Saving Ratio
per cent
seasonally adjusted

Gross household disposable income in quarter two rose by 1.7 per cent on the previous quarter, this follows low growth in the preceding three quarters. The deflator rose by 0.3 per cent so real household disposable income rose by 1.4 per cent.

Household and NPISH final consumption expenditure increased by 1.0 per cent in the second quarter. With available household resources only rising by 0.7 per cent this led to the slight fall in the saving ratio.

The largest quarter-on-quarter contributions to higher disposable income were higher dividends received and lower employees' social contributions. Gross disposable income rose despite big increases in certain deductions from income, especially national insurance contributions and council tax.

In detail, the main quarter on quarter changes to components of household disposable income were as follows:

Within B.2/B.3 there was an increase of 0.9 per cent; gross operating surplus (the main component is imputed rent) rose by 0.6 per cent, and mixed income by 1.2 per

cent.

Wages & salaries (D.11) rose by 0.5 per cent. The published Average Earnings Index (base weighted) rose by 0.6 per cent. Employment (Workforce employee jobs) showed no change. (Current weighted AEI rose by 0.5 per cent).

Employers' social contributions (D.12) rose by 2.4 per cent, with a big increase in national insurance contributions due to the introduction of a higher rate in April, partially offset by lower employer pension contributions (slightly down on an exceptionally high quarter one, but still nearly 10 per cent up on 2002 quarter two).

Property income receipts (D.4) rose by 1.2 per cent. The main increase was in dividends received from shares: dividends from unquoted shares particularly were the highest since 2001 quarter four (non seasonally adjusted). Attributed property income of insurance holders fell by 4.2 per cent.

There was an increase of 0.9 per cent in social benefits received (D.62). Private pensions paid were lower than in quarter one (which was exceptionally high), but there were increases in some government benefits, eg state retirement pensions paid, the new child tax credit, and rent allowances.

Social contributions paid (D.61) fell by 1.4 per cent. National insurance contributions (NIC's) rose sharply following the increase in rates introduced in April. This affects D.6111 employers' social contributions, D.6112 employees' social contributions and D.6113 social contributions by self-employed and non-employed. However employees' pension contributions fell from the high level of quarter one, and this offset the rise in NIC's.

There was a fall of 2.0 per cent in 2003 quarter two in taxes on income (D.51), mainly due to self-assessment taxes (including capital gains tax). These were at a relatively high level in quarter one.

Other current taxes (D.59) rose sharply (12 per cent) in quarter two, due to a 14 per cent increase in council tax.

Household sector (not seasonally adjusted)

Net lending of the household sector was £4.8 billion in the second quarter (but on a seasonally adjusted basis net borrowing of £3.2 billion).

Main events in the financial account in 2003 quarter one:

On the liability side new loans on dwellings continued at a high level. At £23.6 billion this was a new quarterly record.

Unsecured lending from banks at £5.1 billion represented a re-acceleration in growth of consumer credit after a lull in the first quarter.

Despite the very high level of mortgage lending net new assets still exceed new liabilities. Bank deposits at £11.0 billion were again at a high level, although down slightly on new deposits in 2002 quarter two.

Chart SA6

Household Net Lending
£ million
seasonally adjusted

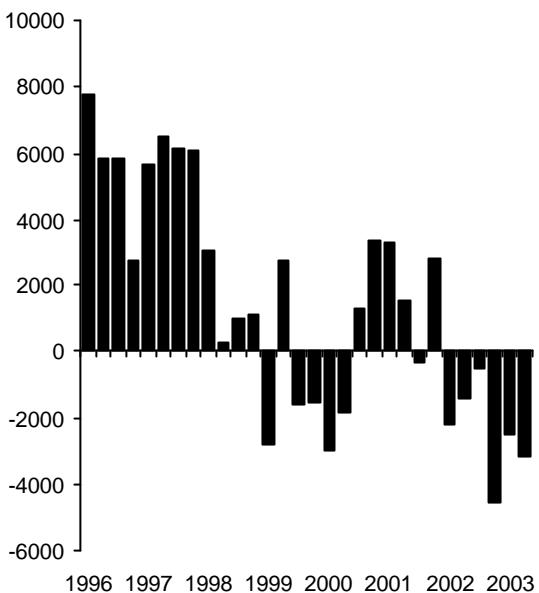

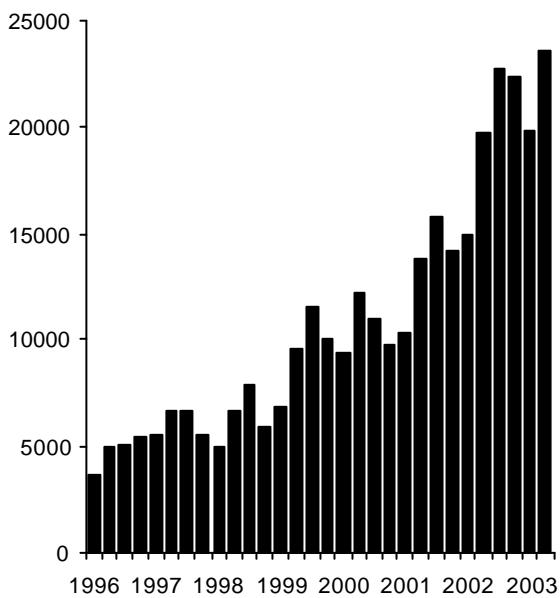

Chart SA7

Household loans secured on dwellings
£ million
non-seasonally adjusted

Household Wealth:

The value of Financial Assets rose by 7.7 per cent to £2810.3 billion for the quarter, the strongest growth rate in four years, whilst Financial Liabilities continued to rise, to £965.8 billion. Net Financial Wealth at £1844.5 billion was up on the previous quarter by over 10 per cent.

THE PRIVATE NON-FINANCIAL CORPORATIONS SECTOR

Sector position (seasonally adjusted)

Private non-financial corporations lent £8.7 billion in 2002, this was the first year since 1996 that the sector were net lenders. This has followed several years since 1999 of being high net borrowers, borrowing over £10 billion each year. In the second quarter of 2003 the sector has reported its fourth consecutive quarter of net lending, slightly weaker than previous quarters at £3.6 billion. (See chart SA8).

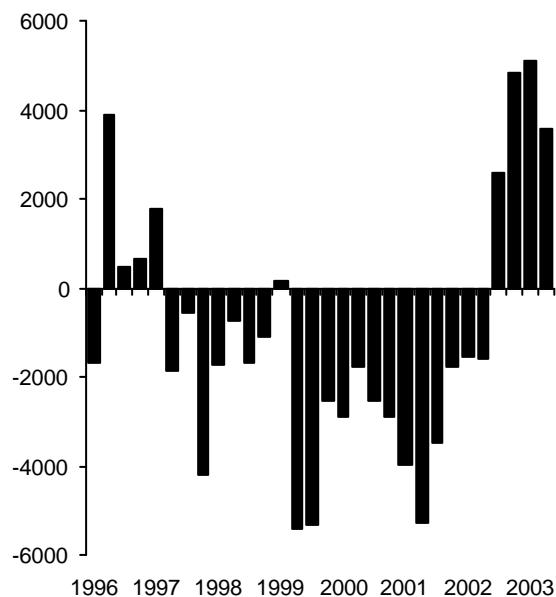

The PNFC sector reported record profits in 2002, this was largely driven by the profits of non-UKCS companies, this is also the reason for record profits in the second quarter of 2003.

The PNFC sector have also received record dividend receipts in the second quarter of 2003 at £20.1 billion, this is largely due to profits being paid by subsidiaries of UK multinationals back to the UK.

As mentioned above, subsidiaries of major UK multinationals have paid some very large dividends back to the UK in the second quarter of 2003. Reinvested earnings are calculated as net profits after dividend payments. As these dividends represented profits made over several quarters this meant that these subsidiaries recorded a significant loss after the dividend was paid - leading to very large negative reinvested earnings for these companies, and significantly reducing total reinvested earnings.

The PNFC sector saw a large increase in investment grants by the government for the second quarter of 2003, these were for improving the transport infrastructure.

Chart SA8
Private NFC's Net Lending
£ million
seasonally adjusted

Main events in the financial account:

PNFC's deposits with UK banks in the second quarter of 2003 remained broadly unchanged from last quarter. The sector have made net withdrawals from their overseas accounts in the second quarter at £1.8 billion compared to high deposits of £16.8 billion in the previous quarter.

PNFC's have issued £5.7 billion in other loans in the second quarter of 2003 following four quarters of these loans being paid back.

PNFC's acquisition of shares at £0.8 billion in the second quarter of 2003 is their lowest since the second quarter of 1995. The sector has also been net disposers of £3.5 billion of overseas shares in the quarter, the first time they have been net disposers since the second quarter of 1998.

PNFC's sector issues of £6.7 billion worth of bonds in the second quarter of 2003 compared to only £2.7 billion in the previous quarter and the highest since the fourth quarter of 2000.

PNFC's have repaid £0.7 billion of loans from overseas banks in the second quarter compared to near record borrowing of £24.0 billion in the previous quarter.

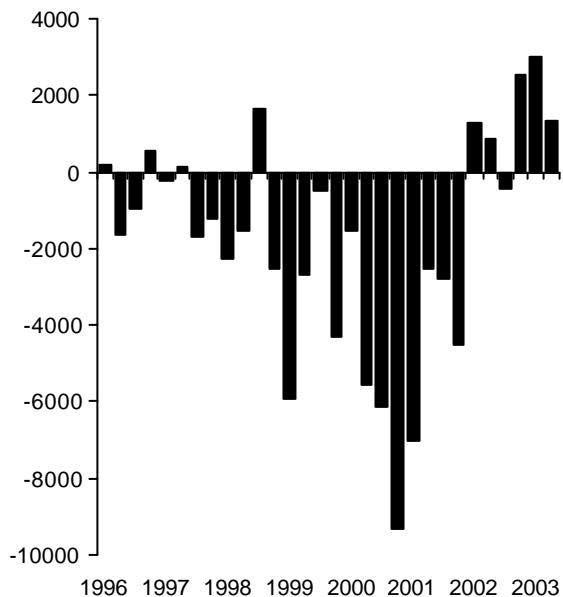

PNFC's have made net issues of new shares in the second quarter of £0.1 billion, this compares to net buybacks of shares at £0.8 billion the previous quarter.

The financial accounts show that the PNFC sector were net lenders in the second quarter of £0.3 billion compared to £5.7 billion in the previous quarter.

THE FINANCIAL CORPORATIONS SECTOR

Sector position (seasonally adjusted)

Chart SA9
Financial Corporations' Net Lending
£ million
seasonally adjusted

In the second quarter of 2003, the net lending of financial corporations was £1.3 billion, a fall of £1.7 billion from the previous quarter.

The gross operating surplus fell by 7.4 per cent, mainly due to a fall in earnings on financial intermediation (the adjustment for financial services), but still stood at a higher level than in all but the previous two quarters.

Interest receipts rose slightly in the last quarter, driven by higher receipts by Insurance companies and Pension Funds, mainly on UK government bonds.

Interest payments rose by 1.3 per cent, driven by higher payments by securities dealers.

Both dividend receipts and payments were high in 2003 quarter two. Dividend receipts increased by £0.9 billion in the quarter, while payments rose by £3.0 billion. Payments and receipts were both boosted by high payments by banks to their holding companies. In addition, payments by 'other' financial intermediaries bounced back after being very low in the first quarter.

The property income attributed to insurance policy holders decreased by 3.5 per cent in the second quarter, a similar fall to that in quarter one.

Employers actual social contributions and employees social contributions both fell in the second quarter: employers actual social contributions by 7.1 per cent and employees social contributions by 18.5 per cent. The fall in employers contributions was driven by a decrease in contributions to self administered pension funds from the high levels in the previous two quarters. Employees contributions returned to a more normal level in quarter two, after being at a high level in quarter one. Social benefit payments also fell in the latest quarter, by 6.5 per cent, driven by lower payments by both self-administered and life insurance company administered pension funds. This has resulted in an decrease in the adjustment for the change in net equity of households in pension funds of £1.8 billion in the latest quarter.

Receipts of net non-life insurance premiums and payments of non-life insurance claims rose slightly in the latest quarter, by 1.7 per cent.

In the latest quarter, payments of taxes on income rose to a level of £2.8 billion due to high payments by insurance companies, an increase of around £0.4 billion.

Gross fixed capital formation fell by £1.1 billion in the second quarter.

Financial account (non-seasonally adjusted)

Banks: The sector had a small overall net financial borrowing of £187 million in 2003 quarter two. This follows two quarters of strong net lending.

Total financial assets increased by £170.4 billion, the highest quarter two figure on record, but was offset by the acquisition of £170.6 billion in financial liabilities, again a record for quarter two.

Unlike quarter one when the acquisition of assets was driven by loans in quarter two there has been sharp growth

in the acquisition of currency and deposits which increased by £107 billion. This has been strong in all areas, but particularly Deposits with Rest of the World MFI's, which grew by £62 billion.

Although loans were not the driving force of quarter two, they did remain strong, increasing by £44.8 billion. Loans secured on dwellings at £12 billion, rebounded from last quarter's unusually low quarter one, but still remained lower than the very high 2002 quarter two figure.

There was also a strong growth in the acquisition of shares, up by £11.3 billion, particularly in Rest of the World issued shares, which at £9.7 billion was the highest figure since 2000 quarter two.

The increase in financial liabilities is being driven by an increase in both Sterling Bank Deposits, up by £47.6 billion and Foreign Currency Bank Deposits, up by £117.3 billion.

Building Societies: Building societies strengthened their stance as net lenders, with a net figure of £685 million in the latest quarter.

Deposit inflows grew sharply, and at £5.3 billion were the strongest since 1997 quarter two. Whilst short term loans to UK MFI's remained weak for the second successive quarter, loans secured on dwellings at £4.8 billion had their highest increase for over a decade (since 1991 quarter four).

The growth in the acquisition of liabilities is being driven by an increase in transferable deposits, up £3.9 billion, outweighing a weakening in the acquisition of short term securities issued by UK MFI's at £1.6 billion.

Other financial intermediaries and financial auxiliaries:

In the second quarter of 2003, the increase in deposits was £17.5 billion higher than in the previous quarter: deposits with UK MFI's of £27.1 billion were £23.2 billion higher, though this was partially offset by a £4.2 billion decrease in deposits with overseas banks to £22.8 billion.

Net investments in short term money market instruments issued by UK MFI's showed a substantial increase in the second quarter of £7.5 billion following a decrease in the previous quarter of £4.0 billion. Net investments in bonds issued by UK residents also increased in the latest quarter by £1.7 billion after disinvestment in the previous quarter of £3.8 billion. In total, there was net investment in bonds and short term money market instruments of £3.2 billion, following disinvestment in the first quarter of £11.7 billion.

Securitisations of mortgages taken out with Banks reduced in the latest quarter to a normal investment of £6.6 billion after the sharp increase in the first quarter.

Net investment in shares and other equity was £20.1 billion in the second quarter compared to £5.4 billion in the previous quarter. This was mainly due to investment in overseas shares and other equity which increased to £16.5 billion from £8.4 billion. Additionally, there was net acquisition of both quoted and unquoted UK shares, of £2.5 billion and £1.1 billion respectively, following net disinvestment in the previous quarter.

Net liabilities in currency and deposits fell by £3.2 billion compared to an increase of £2.3 billion in the previous quarter. The net acquisition of liabilities on securities other than shares were slightly lower, at £11.7 billion, than in the first quarter. Short term loans by rest of the world MFI's increased to £37.4 billion, up from £4.6 billion in the previous quarter. Long term loans by UK residents increased to £7.8 billion in the second quarter, after decreasing in the first quarter by £0.9 billion. Direct investment loans increased by £1.3 billion after decreasing in the previous quarter by £0.4 billion. Net share issues by UK other financial intermediaries and financial auxilliaries fell to £0.3 billion from the high previous quarter figure of £9.1 billion. There were net issues of UK mutual fund shares of £3.7 billion in the latest quarter.

Insurance Corporations and Pension Funds

There was a net reduction in deposits by the sector of £2.5 billion in the second quarter, mainly due to disinvestment in sterling bank deposits of £2.0 billion. There was also disinvestment in bonds issued by the rest of the world of £2.4 billion, but net investment in UK bonds at £9.0 billion. Long term loans by UK residents increased by £0.2 billion in the latest quarter after a large increase of £4.5 billion in the first quarter. There was net investment in UK mutual funds of £2.0 billion in the second quarter compared to net disinvestment in the previous quarter of £0.3 billion.

In the second quarter, £7.0 billion was added to the net equity of households in life assurance and pension fund reserves, £0.7 billion less than in the previous quarter.

REST OF THE WORLD SECTOR

The external balance B.12 shows a record surplus (UK current account deficit) in the second quarter of £8.6 billion. This surplus is driven by the introduction of MTIC fraud data (seen in B.11) and a fall in the UK income surplus with the rest of the world in D.4.

Within D.4, reinvested earnings (D.43) due to the UK are negative in the second quarter at -£2.3 billion. This is due to group restructuring within a large UK company resulting in an exceptional dividend payment, which is reflected in the record total for distributed income of corporations (D.42) of £16.5 billion. A fall in earnings due to UK direct investors, coupled with an increase in earnings on direct investment in the UK are the main factors in the narrowing UK income surplus.

The rest of the world surplus (UK deficit) on external trade in goods and services (B.11) increased to £8.3 billion in the latest period. This data incorporates the missing UK imports identified in the MTIC fraud adjustments. The deficit on trade in services has remained broadly unchanged in the second quarter.

Current transfers (D.7) have increased from £2.5 billion in the first quarter to £3.3 billion in the second quarter; the total net contribution to EU institutions in the latest quarter was £1.5 billion.

Within the Financial account: Net transactions in UK investment abroad fell while foreign investment in the UK rose slightly in the latest quarter, resulting in net inward investment of £11.2 billion.

Selected net transactions in the latest period show:

Investment in equity capital abroad and inter company lending both fell in the second quarter contributing to a £27.4 billion fall in transactions.

UK residents invested heavily in foreign equities (£26.3 billion), following three successive quarters of net disinvestment.

UK deposits abroad grew by £83.8 billion in the latest quarter, up from £57.5 billion in quarter one; foreign currency deposits by UK banks showed the largest increase. This increase in deposits was offset by a fall in foreign currency loans abroad to £3.2 billion in the second quarter from £42.2 billion in the first quarter.

There was disinvestment in UK quoted equities of £1.7 billion in the latest quarter, compared with investment of £10.3 billion in the first quarter. The high level of net investment seen in quarter one mainly reflected the use of equity capital to fund a major direct investment acquisition.

NOTES

Annual chain-linking

The UK national accounts have moved to annually weighted and chained estimates of volume measures, as recommended in the System of National Accounts 1993, with effect from 30 September 2003. An article explaining the effects of annual chain-linking on the Blue Book 2002 national accounts dataset was published in the April 2003 edition of Economic Trends. Further information on the size and sources of revisions can be found in the briefing note accompanying the 2003 quarter two Quarterly National Accounts First Release.

As a result of the introduction of annual chain-linking, the term "constant prices" is no longer relevant for the UK national accounts and has been replaced by "chained volume measures" (also "in chained volume terms").

MTIC

The revisions to the trade in goods relate only to part of the 'carousel' version of VAT MTIC fraud. This fraud leads to underrecording of imports as fraudsters import goods, which they then sell on before disappearing without paying VAT on that sale. The goods are eventually exported back to the EU. Such exports are declared so VAT can be claimed back. Because intra-EU trade statistics are collected using the VAT system, these exports are therefore already reflected in the UK's trade in goods statistics.

Quarterly alignment adjustments

To improve the coherence of the quarterly accounts, adjustments are made to quarterly estimates of both the expenditure and income analyses of GDP for 1983 onwards. These adjustments, which sum to zero across each of the years 1983 to 2002, are attributed to the change in inventories component of GDP analysed by expenditure and to gross operating surplus of companies component analysed by income. These adjustments may be considered as allowing for timing differences in the recording of transactions in different parts of the economy. In addition changes in inventories is a component where accurate quarterly measurement is more difficult. These quarterly adjustments modify the aggregates derived from expenditure or income components so that they better reflect the quarter to quarter paths of the output measure of GDP.

The alignment adjustments included in GDP estimates in this publication are as follows:

1 Estimates cannot be regarded as accurate to the last digit shown.

2 Components of output are valued at basic prices, which excludes taxes and subsidies on production.

3 Weights may not sum to the totals due to rounding.

A4 Gross value added at chained volume measures basic prices, by category of output^{1 2}

1 The residual error is, by convention, the amount by which the expenditure-based approach to measuring GDP exceeds the income-based estimate. It is also the sum of two components: the statistical discrepancy (expenditure) with sign reversed, and the statistical discrepancy (income) with natural sign.

2 Income data deflated by the implied GDP deflator, based on expenditure data.
