## Introduction

In an Interim Report published in August 1951* the Cost of Living Advisory Committee recommended that an enquiry into the pattern of expenditure by private households should be held as soon as possible and that there should be smaller-scale enquiries at frequent intervals thereafter. The large-scale Household Expenditure Enquiry took place in 1953-54 $\dagger$ and the smaller-scale continuing Family Expenditure Survey $\ddagger$ began in 1957. In 1962 the Committee recommended the use of information obtained from the Family Expenditure Survey over a period of three consecutive years as a basis for annual revision of the weighting pattern of the official index of Retail Prices.§ This recommendation was accepted by the Minister of Labour and a new series of the Index was started in January 1962.

The Ministry of Labour is the Department responsible for carrying out the Survey but the selection of the sample, the interviewing of households and the coding of the records is carried out by the Social Survey Division of the Central Office of Information.

Ministry of Labour
8 St. James's Square
London S.W. 1
October, 1965

As the Survey is multi-purpose in character and serves the needs of several government departments the detailed plans for each year's operations are considered by an interdepartmental committee under the chairmanship of the Director of the Central Statistical Office, and close liaison is maintained between the Ministry of Labour, the Central Statistical Office and the Social Survey in the day-to-day running of the Survey.

The households which provided the records on which this report is based are thanked for their co-operation.

[^0]
## Part I. Description of the Survey

## Objects of the Survey

1. The Family Expenditure Survey is designed to meet a variety of needs. Information about the pattern of expenditure is required by the Ministry of Labour to provide the weights for the Index of Retail Prices. Information about expenditure is needed by the Central Statistical Office mainly to supplement the sources used in compiling the official estimates of national expenditure and to study the redistributive effects on income of taxation and social benefits. Other government departments receive regular information on a variety of topics and this use of the Survey material is continually expanding.
2. In addition, requests for information derived from the Survey are received from research and social workers, and private firms and organisations. So far as possible these enquiries are met, provided that the required information is readily available and does not reveal particulars of an individual household.

## Main features of the Survey

3. Each year a sample of about 5,000 addresses is selected and these are visited in rotation throughout the year. The households at the selected addresses are asked to co-operate in maintaining detailed expenditure records for 14 consecutive days, and in providing interviewers with information about the household, about incomes and about certain payments which recur fairly regularly (e.g. rent, gas, electricity and telephone accounts, licences and insurances, education, season tickets, and hirepurchase). Provided that all spenders in the household co-operate, each spender is subsequently paid $£ 1$ for the trouble involved in supplying the information.

## Selection of households

4. The Survey covers all types of private households in the United Kingdom. The selection of the sample has to satisfy two main requirements, i.e. that every private household in the country should have an equal chance of being included in the sample, and that the sample should be spread as evenly as possible over the year.
5. The sample is drawn in two stages. First, the areas in which households are to be interviewed are selected
from a list of local authority areas covering the country as a whole. Second, the addresses to be visited are selected in the areas chosen. The areas are stratified by a number of factors which are believed to influence expenditure. The addresses are obtained by random selection from the Registers of Electors maintained for parliamentary and local government election purposes. An interval sample of electors is first drawn but only those addresses where the selected elector happens to be the first entry on the Register for that address are included in the final sample. Thus each address in a particular first-stage unit is given an equal chance of selection. The procedure for Scotland and Northern Ireland differs slightly from that for England and Wales. The method of selecting the sample is very fully described in the Report of the Allen Committee*.

## Collection and processing of information

6. The arrangements for the 1964 Survey are similar to those described in paras. 6-23 of the 1962 Report $\dagger$. Schedules similar to those reproduced in Appendix III of that Report were used in the 1964 Survey. Definitions contained in Appendix IV of the 1962 Report apply equally to 1964 except for housing costs for "Owneroccupied dwellings " which are discussed in para. 23 of the 1963 Report $\ddagger$.

## Proportions of households co-operating

7. The sample of about 5,000 addresses visited each year contains some which are found to relate to hotels, boarding houses, institutions, etc. (which are outside the scope of the Survey), or which contain no household at all. On the other hand, some of the addresses are found to contain more than one household.
8. Allowing for these cases an effective sample of about 4,800 households normally results. In 1964, however, the effective sample was only about 4,500 because of the suspension of initial visits for three weeks before the date of the General Election. In some of the households visited one or more members refused to co-operate or could not be contacted after repeated calls. The co-operating households represented 74 per cent. of the effective sample in 1962, 71 per cent. in 1963 and 72 per cent. in 1964.

## Part II. Results of the Survey

## General

9. The 1964 Report includes several new features. The first of these is an analysis by size range of the earnings of individual employees (see paras. 14-18). Another new tabulation analyses households by ranges of expenditure on various housing items (see paras. 22-24). The incidence of possession of selected items of household equipment is also included for the first time (see para. 25 ).
10. The layout of the expenditure tables is similar to that used in earlier Reports but, in order to provide as

[^1]great a variety of recent information as possible, analyses are included for certain groups of households which have not hitherto been separately distinguished in this series (see para. 31). Distributions of main household characteristics (see paras. 12-13) and analyses of sources of income (but for different groups of households as compared with 1963) are again provided (see paras. 19-21).
11. For ease of reference, Appendix I has been amplified and divided into 3 sections. Section (a) gives the codes used for every separately distinguished item of expenditure; section (b) does the same thing for income items; while section (c) lists the codes used for some
miscellaneous items of information about the households including the number of rooms in the dwelling, charges recoverable as business expenses, imputed values of free and concessionary goods and the employment status of household members.

## Household Characteristics.

12. Detailed distribution analyses of the main characteristics of co-operating households are contained in Table A on page 3. An analysis of the sex, age and working status of persons in these co-operating households is shown in Table B on page 5.

*The combined coverage of codes 5 and 6 corresponds with that of codes 5, 6 and 7 combined in Section X of the 1963 Report.

## Table B. Analysis of persons in co-operating households by sex, age and working status

## Household income

13. The following series of distribution tables provides cross classifications of households in different household income ranges by selected characteristics of the households in the Survey. These characteristics comprise income of head of household and Standard Region in Tables C and D below. Type of administrative area in which the household is situated, type of tenure of dwelling occupied, and size of household are given in

Tables E, F and G respectively on page 7. Table H, also on page 7 , is a new table analysing households containing working married women by the number of children in the household. Finally, household composition (Table J) and occupation of head of household (Table K) are shown on page 8 . For convenience the same household income ranges have been used for each of these distributions. Consequently, the numbers of households in some of the groups which are separately distinguished are very small and should not, therefore, be considered in isolation.

## Earnings of individuals in households

14. In general, results derived from the Family Expenditure Survey are tabulated on a household basis. The following tables are a new departure since they present distributions of earnings for individual workers in selected groups of industries and occupations. The classification by industry is based on that used in the Standard Industrial Classification $\dagger$. The occupational classification used is peculiar to the Family Expenditure Survey (see Section VIII of Table A on page 4 above). The distributions are confined to civilian employees who were actually at work when they were interviewed. Employers, persons working on their own account, and members of the Armed Forces, Police and Fire Services are excluded, as are employees who were temporarily away from work on account of sickness, unemployment or
other reasons. Because of these exclusions, numbers of workers analysed in these distributions are fewer than those shown in Table B on page 5.
15. Most of the earnings analyses in the tables which follow are confined to full-time $\ddagger$ adult workers-men being defined as those aged 21 and over and women as those aged 18 and over. In addition, however, "All industries" analyses are provided for the earnings of full-time boys and girls, and part-time women§. Arithmetic means, medians and quartiles are also supplied for each separate earnings distribution.
$\dagger$ Standard Industrial Classification (revised 1958). H.M. Stationery Office.
$\ddagger$ Normally employed for over 30 hours a week. §Normally employed for over 10 hours a week up to and including 30 hours a week.
16. Table $L$ on page 9 analyses the earnings of all adult male workers in broad industry groups, while Table M on page 10 provides similar details but for manual workers only. Table N (on page 11) contains an industrial analysis of the earnings of all adult women employees by size of earnings and distributions of earnings for women manual workers are given in Table 0 on page 11. Table P on page 12 analyses the earnings of men and women professional and managerial and clerical workers respectively, and of women shop assistants. The final table Q (on page 12) provides a distribution of the earnings of the relatively small number of part-time women, and young persons in full-time employment who are included in the Survey.
17. Earnings are the normal gross wage or salary of the worker concerned. This is calculated by adding to the
normal " take-home" pay, (see definition on page 99, col. (3)), deductions at source, such as income tax payments, National Insurance contributions, payments under the Graduated Pension Scheme, and other deductions, e.g. payments into firms' social clubs, superannuation schemes, works' transport, benevolent funds, etc. Additions are also made to include the weekly value of substantial bonuses or other occasional additions to earnings.
18. As common earnings ranges have been used for several groups of workers, the numbers of workers in some of the groups which are separately distinguished are small and should not, therefore, be considered in isolation. On the other hand more detailed breakdowns for some of the larger published groups are available and will, so far as possible, be supplied on request.

Table Q. BOYS, GIRLS AND PART-TIME WOMEN. ALL OCCUPATIONS

[^5]
## Sources of household income

19. The following tables analyse gross household income by its main sources. Income as defined for the purposes of the Survey is before deduction of income tax, national insurance contributions and any other deductions at source. The only main change in 1964 is the inclusion of income from money scholarships disbursed by a member of the household. The individual income items which comprise the eight main components of gross income are listed in Appendix I(b) on page 99 of the current report.
20. Table R on page 14 gives the sources of income of households classified by administrative area and by ranges of household income corresponding with those used in expenditure tables 4 to 7 on pages 54-69 of this Report. Table S on page 16 contains similar analyses for households classified by size and by ranges of household income corresponding with those used in expenditure tables 8 to 12 on pages $70-89$. Table T on page 18 provides sources of household income for all households in the Survey grouped by the nine ranges of household income used in the analyses in expenditure table 2 on page 36.
21. Income as defined above does not include withdrawals from past savings, proceeds from the sale of houses, cars, furniture or other capital assets, or receipts from legacies, maturing insurance policies or other windfalls. In addition, to some extent income information relates to periods further in the past than expenditure information. For instance, " self-employment income" is based on the last 12 months for which a figure can be given; the weekly equivalents of bonuses paid to employees are calculated from those received in the previous year; and (with the main exception of basic wages and state benefits) most of the sources of income are estimated from receipts during the preceding 12 months. On the other hand, most of the expenditure information relates to the 14 days during which the household kept its records. Furthermore, certain payments are recorded which relate to household savings or to the purchase of large capital assets. As neither withdrawals from savings nor net receipts from the sale of large assets are included in income, the inclusion of these payments in household expenditure can result in the average expenditure for quite large groups of households exceeding the average incomes of these groups.

## Housing expenditure distributions

22. The average housing costs for households classified by type of tenure are included in each of the expenditure tables in this Report. For some purposes, however, the distribution of the amounts spent by individual households is of more interest than the averages for groups of households. Accordingly, Table U on page 20 provides distributions of selected housing expenditures for households classified by household incomes within a classification by the four main types of tenure-Local Authority dwellings rented unfurnished, other dwellings rented unfurnished, dwellings in process of purchase by occupier and dwellings fully owned by occupier. No distribution analyses are supplied for housing costs of households in rented furnished or in rent-free dwellings because the numbers of such households in the sample are small. (Details of all the items of housing expenditure and housing income which are used to provide publication groups 1-6 and 97 in the expenditure tables are contained in Appendix I(a) on page 90). The items for which separate distributions are provided in Table U include numbers of rooms; calculated rents, rates and rateable values (see para. 23 aside); dwelling insurance; net housing costs; expenditure by occupiers on house repairs and maintenance; and mortgage payments.
23. As in 1963, rateable values together with the rate poundages of the areas in which households were located were used to calculate the rates payable by households on the portions of the dwellings which they occupied. Many tenants are unable to provide separate expenditure figures for rent (as distinct from rates). Accordingly, in 1964, calculated rents were estimated by deducting calculated rates from the sum of rent and rates as paid by the household concerned. Under this procedure, in a few cases where rents were nominal they were more than offset by the tenant's share of the rates with the result that the calculated rent was negative.
24. It will be seen that the items which are distinguished in Table U differ slightly from those used to calculate net housing costs for publication in the expenditure tables. In the housing costs in the expenditure tables rateable values relate to the entire dwelling including sub-let portions but are included for owner-occupied dwellings only. In the case of rented dwellings, costs are estimated from the informant's statement. Details of rent and rates are not always separately available and may differ slightly from the calculated rent and rates which are featured in Table U notably when sub-letting is involved.

*Repayment of interest and/or capital on loan or mortgage, but excluding capital repayments covered by other arrangements, e.g. Premiums on an endowment policy.
$\dagger$ Some households in these groups are recorded more than once in these statistics since they were making repayments on mortgages from different sources.

## Household equipment distributions

25. This new series of distribution tables shows the incidence of possession of selected items of household equipment for various groups of households. "Possessing" means having the item identified ordinarily continuously available whether or not it is actually owned. The goods identified comprise a telephone, washing machine, refrigerator, car, and central heating. In addition, purchase of a combined radio/television licence within the twelve months preceding the date of interview has been taken as indicating possession of at least one
television set. Similarly, purchase of a licence for sound radio only provides an estimate of households with a radio (but not a television set). Table V on page 28 provides information for the goods described above for households cross-classified by four administrative areas and by income groups corresponding with those used in expenditure tables 4 to 7 on pages 54-69. Table W on page 29 gives similar details for households classified by size and by household income using the same groupings as in expenditure tables 8 to 12 on pages 70-89.

## Table V. Percentage of households with selected goods by administrative area and household income

*See para. 25 on page 27.

## Expenditure

26. The expenditure tables in this Report are presented in a form comparable with that of tables in earlier Survey reports. In addition to expenditure* the tables provide details of average weekly household incomes $\dagger$, together with information about the average size and composition of the households in each group of households for which separate expenditure details are provided. The General Notes to Expenditure Tables (page 33) should be read in conjunction with the tables in this Report. Appendix I(a) on page 90 should also be consulted for details of the individual expenditure items which compose the publication groups in the expenditure tables and Appendix I(b) on page 99 for the components of income. For ease of reference, details of earlier published tables comparable with those contained in this Report, are contained in Appendix III on page 106.
27. All expenditures are shown as weekly averages per household, i.e. for each item the aggregate expenditure recorded by households in the group has been reduced to a weekly value and divided by the total number of households in the group, irrespective of the number incurring expenditure on the item. With housing expenditures, however, it is sometimes necessary to consider the average payments for a particular type of accommodation by households occupying that type of accommodation and, therefore, average housing costs are also şhown separately for households renting unfurnished accommodation, furnished accommodation, living rent-free and living in their own dwellings. Where households sub-let part of the dwelling they occupy, the amount received from the sub-tenant is deducted from the expenditure on rent, rates, dwelling insurance, etc. in order to arrive at their housing costs. When the amount of the sub-let rent exceeds the total housing costs, the excess is treated as income.
28. In the case of households living in their own dwellings, over half were still making mortgage payments and the rest, whose dwellings were fully owned, were making payments only for rates, repairs, etc. In the tables in this Report, an imputed value or notional rental equivalent has been included in the expenditure of all owner-occupiers, whether or not they were making mortgage payments, and a similar amount has been taken into account as part of the income of owner-occupiers. Such a notional measure of the cost of owner-occupancy in terms of the income sacrificed exists in the rateable value. The housing costs shown for all owner-occupiers therefore consist of the weekly equivalents of the rateable value and of any actual payments for rates, repairs, etc. less receipts, if any, from sub-letting. The average weekly equivalent of the rateable value is given separately in order to show the contribution of this item to the housing costs of owner-occupiers. Mortgage payments and amounts paid for the outright purchase of dwellings or for major structural additions are not included as
housing costs, but are shown in Item Group 97 under "Other Payments Recorded ".
29. For many purposes the proportions of household expenditure on different goods and services are of more interest than the absolute levels of expenditure. To obtain such proportions it is necessary to have figures of "total household expenditure", but since any definition of expenditure is to some extent arbitrary, the inclusion or exclusion of certain types of payment is a matter of convenience or convention depending on the purpose for which the information is to be used. In the tables which follow, totals have been provided representing current expenditure on goods and services. Total expenditure defined in this way excludes payments which are really savings or investments (e.g. purchases of National Savings Certificates or shares; life insurance premiums; contributions to pensions funds). Income tax payments and National Insurance contributions, and mortgage and other payments for purchase of or major additions to dwellings are also excluded. All these types of expenditure, together with net betting payments (shown only in Table 2, page 38), appear under the heading "Other Payments Recorded ".
30. Table 1 on page 34 shows, for all co-operating households, average weekly expenditure for 1964 and for the three-year periods 1959-61, 1960-62, 1961-63 and 1962-64. Table 2 (page 38) analyses the expenditure of cooperating households by gross income of households. Nine income ranges are distinguished and an "All Households" average is provided. The income ranges rise by $£ 5$ steps to a top range of $£ 40$ a week or more.
31. The remaining expenditure analyses differ from those in the 1963 Report. Table 3 on page 46 provides the expenditure of households classified by nine ranges of head of household income. The next four tables give the expenditure of households cross-classified by administrative area and by household income. The expenditure of households in Greater London is given for four different household income groups in Table 4 on page 54 . Five household income categories are provided for "Other urban areas with over 100,000 population" and for "Smaller urban areas" in Tables 5 and 6 on pages 58 and 62 respectively. Similar details for Rural Districts are contained in Table 7 on page 66. Another new set of expenditure tables distinguishes households cross-classified by size and by household income. Analyses of groups of households consisting of from one to five or more persons, each group being further classified by ranges of household income, are contained in Tables 8 to 12 on pages 70-89 of this Report.
*See Definitions 11-18 on pages 75-76 of the Family Expenditure Survey Report for 1962.
$\dagger$ Tables 2-12 only.

## Reliability of the results

32. The results obtained from the Family Expenditure Survey are subject to approximation as are all estimates from sample investigations. The sampling error is smallest when an item is purchased frequently by large groups of households and the expenditure does not vary much between households. Conversely it is largest in relation to small groups of households, and for items purchased infrequently for which expenditure shows considerable variation as between households. In the tables in this Report, expenditure and incomes for which the sampling error is known to be large are indicated by footnotes to the items concerned.
33. No adjustment has been made to the information provided by co-operating households. There is apparent under-recording of expenditure on alcoholic drink (only about half this expenditure seems to be included in the records), on tobacco (but to a much lesser extent), on meals out, chocolates, sweets and ice cream.Confectionery and ice cream purchased by children out of pocket money will usually be recorded simply as pocket money and not under the separate items. This will also contribute to the discrepancy for these commodities. On the other hand, slot meter payments for gas and electricity are
overstated since no account has, so far, been taken of rebates received. Nor has any adjustment been made for the element of non-response which is an unavoidable feature of any sample investigation which has to rely on voluntary co-operation. The full co-operation of about one quarter of the households approached was not secured and the characteristics of households which did not co-operate, insofar as they could be ascertained, appear to differ slightly from the characteristics of those which did. Such differences may be reflected in differences in expenditure patterns.
34. Comparisons of successive years' results afford confidence in their general reliability, and examination of the different income and expenditure patterns of the various groups of households shows a marked degree of internal consistency. Some indications of the reliability of the Survey results and how this inevitably varies between different headings of expenditure are given by the percentage standard errors of the average weekly expenditures of all households co-operating in the Survey in 1964. These are contained in Appendix II on page 102. The standard errors for expenditures averaged over three years would naturally be lower than the standard errors for 1964 only.

## General Notes to Expenditure Tables

1. The average number of persons per household has been rounded to two decimal places.
2. Both individual and total expenditure figures have been independently rounded to one decimal place of a penny. The sums of the constituent items do not, therefore, necessarily agree exactly with the totals shown.
3. "Nil " expenditures and expenditures of less than 0.05 d . are both shown as " - ".
4. Fuller details of the commodities and services listed in column 2 of the tables will be found in the Item Code reproduced in Appendix I(a) on page 90. Components of average weekly household income are given in Appendix I(b) on page 99.
5. The figures for the "Housing" group include, in addition to specific payments, the weekly equivalent of the rateable value of dwellings owned by their occupiers. Rateable values for households in England and Wales which cooperated in 1964 are based on revaluation lists which took effect from April 1963. Prior to this date rateable values in England and Wales were based on letting values in 1939 less an allowance for repairs. Expenditure on the purchase or structural alterations of dwellings, including deposits and mortgage repayments, is given Item in Group 97 under "Other Payments Recorded ".
6. Expenditure on repairs to housing and to most household durable goods and vehicles has been included in the appropriate groups under " Housing ", "Durable Household Goods" and "Vehicles ", respectively. On the other hand, expenditure on repairs to clothing, footwear and other personal goods has been included under "Services".
7. Prior to 1964 all patent fuels (including patent cokes) were included in Item Group 9. From 1964 onwards patent cokes are included in Item Group 10.
8. Purchases, including hire purchase, of gas and electric appliances have been included in the "Durable Household Goods" group, but charges for the rental of gas and electric appliances have been included under "Fuel, Light and Power ". No account has been taken of the rebates received in respect of certain slot meter payments for gas and electricity.
9. The recorded expenditures on alcoholic drink and tobacco and (but to a much lesser extent) on meals bought away from home, sweets, chocolates and ice cream are known to be understated.
10. In this Report, Item Group 60 " Furniture, including repairs " includes expenditure on composite purchases of household durable goods which were separately recorded in Item Group 65 in earlier Reports.
11. Item Group 102 " Betting, payments less winnings " is included in Table 2 only.
12. Instances where average weekly expenditures of 2 s . 0 d . or more are known to have a relatively high sampling error are indicated by footnotes to the tables.

Table 1
Expenditure of all households for 1964;
and for the three-year periods 1959-61, 1960-62, 1961-63 and 1962-64

*The averages shown for each of the three-year periods are unweighted averages of the yearly averages.

*Including five households with incomes below $£ 10$ which are not shown separately in this table.
$\dagger$ This figure has a relatively high sampling error.

## Appendix I

## Expenditure, income and information codes

## (a) Item code used for summarising expenditure records in 1964

The item code used for summarising the records is more detailed than the groupings shown in the expenditure tables in this Report. The separately coded items which are included in the groups used in the expenditure tables are shown in column 3 below in terms of the item code used in 1964. Separate figures are available for each separate entry in column (3) below and also for items on which hire purchase payments were made.

[^42]| (1) | (2) | (3) |
| :---: | :---: | :---: |
| Item Group | COMMODITY OR SERVICB | DESCRIP TION OF ITEMS COMPRISING GROUPS |
|  | Fuel, Light and Power | Wentinay) luay |
| 7 | Gas, and hire of gas appliances | Gas, credit account. |
| 8 | Electricity, and hire of electric appliances | Electricity, credit account. |
|  |  | Slot meter payments (electricity). <br> Hire of electric appliances (not hire purchase). |
| 9 | Coal and manufactured fuels* | Coal and manufactured fuels. Cost of concessionary coal. |
| 10 | Coke* | Coke (including patent cokes). Cost of concessionary coke. |
| 11 | Fuel oil, and other fuel and light | Paraffin. <br> Other fuel and light (e.g. fuel oil, calor gas, candles, firewood). |

## Food

Bread, rolls, etc.
Flour
Biscuits, cakes, etc.

Breakfast and other cereals

Beef and veal
Mutton and lamb
Pork
Bacon and ham (uncooked)
Ham, cooked (including canned)
Poultry; other and undefined meat

## Fish

"Fish and chips"

Bread, milk loaves, rolls.
Flour, plain or self-raising.
Biscuits, shortbread, wafers, etc.
Cakes, buns, currant bread, fruit pies, pastries, scones, etc.
Composite purchases of bread, flour, biscuits, cakes, not separately distinguished.

Prepared breakfast cereals.
Other cereals (e.g. oatmeal, macaroni); custard powder.
Beef and veal.
Mutton and lamb.
Pork.
Bacon and ham (uncooked).
Ham, cooked (including canned).
Poultry (cooked and uncooked, canned, bottled, frozen).
Game, venison, rabbits (cooked and uncooked, canned, bottled, frozen).
Liver and other offal.
Sausages (uncooked), and sausage meat.
Cooked meats and meat products.
Canned and bottled meats and meat products.
Meat not otherwise defined.
Fish (including shellfish)-fresh, dried, canned, frozen.
Fish and chips, fried fish, fish cakes.

57 Hats, gloves, haberdashery, etc.
Women's and girls' headgear.
Haberdashery (e.g. gloves, scarves, handkerchiefs, ties, sewing cotton, knitting wool, ribbons, zip fasteners, needles).
$59 \quad$ Footwear fully defined.

Floor coverings repairs

Clothing materials and making-up charges; clothing not

Durable Household Goods
Furniture, including repairs*

Soft furnishings and household textiles

Radio, television and musical instruments, including

Gas and electric appliances, including repairs

Appliances other than gas or electric appliances $\dagger$ China, glass, cutlery, hardware, ironmongery, etc.

Fire, burglary, etc. insurance of furniture, etc.

## Clothing materials.

Clothing undefined.
Other clothing charges; hire of clothing; dressmaking charges (excluding repairs and alterations).

Men's boots, shoes, slippers, wellingtons, etc.
Women's shoes, slippers, bootees, wellingtons, etc
Children's footwear
Footwear not otherwise defined.

## New furniture

Second-hand furniture.
Repairs to furniture.
Composite purchases of household durable goods not separately distinguished.
Floor coverings (including making-up charges for floor coverings).
Household textiles (including making-up charges).
Mattresses, pillows, bolsters, cushions, etc.
New radio, television, tape recorders, radiograms, etc.
Second-hand radio, television, tape recorders, radiograms, etc.
Spare parts for radio, television, radiograms, etc.
Repairs and maintenance of radio, television and musical instruments.
Musical instruments.
Accessories for musical instruments (e.g. gramophone records, sheet music).

Gas appliances.
Electric appliances and appliances undefined between gas and electric.
Spare parts for gas and electric appliances.
Repairs and servicing of gas appliances (gas account).
Repairs, and servicing of electric appliances (electricity account).
Repairs, and servicing of gas and electric appliances (not account).
Household appliances other than gas or electric appliances.
Chinaware, glassware (not mirrors), pottery, etc.
Cutlery (not silverware).
Household brushes (not paint, hair, tooth, nail brushes).
Other household hardware (e.g. fire irons, kettles, bowls, gardening and other tools, dustbins).

Fire, burglary, etc. insurance of contents of dwelling.
*In this Report, this group includes expenditure on composite purchases of household durable goods which were separately recorded under

Domestic help, etc.

## Hairdressing

Footwear and other repairs not allocated elsewhere

Laundry, cleaning and dyeing

Educational and training expenses

Medical, dental and nursing fees

Subscriptions and donations; hotel and holiday expenses; miscellaneous other services

Resident and non-resident domestic help, including gardeners and baby sitters; day nurseries; window cleaning, chimney sweeping, etc.

Hairdressing, manicure, beauty treatment, etc., including tips.

Repairs to footwear and materials for such repairs.
Repairs to personal goods (e.g. clothing, jewellery, fountain pens, umbrellas, scissors)
Other repairs not allocated elsewhere.

Laundry.
Launderettes, and hire of washing machine.
Cleaning and dyeing.

University fees.
University fees and maintenance where not separable.
Technical college fees including maintenance (where not separable).
Further education, maintenance.
Direct grant school fees including maintenance (where not separable).
Independent school fees.
Independent school fees and maintenance where not separable, and direct grant school maintenance where separable.
Other training, other expenditure (e.g. private tuition, including music lessons).

National Health Service payments-dentist.
Private medical and dental fees; opticians, chiropodists; nursing and convalescent homes, hospitals.

Subscriptions to trade unions and professional organisations.
Subscriptions not allocated elsewhere (e.g. Social Clubs, Women's Institutes).
Cash gifts and tips (not loans) not allocated elsewhere.
Charitable donations and subscriptions.
Hotel, boarding house, holiday camp, etc. charges.
Holiday expenses not otherwise allocated.
Travellers' cheques spent abroad.
Stamp duties; passports; driving test fee.
Dog licences.
Miscellaneous licences (not dog, radio, driving, etc.) e.g. marriage licence.
Miscellaneous expenditure on services (e.g. newspaper advertisements, public (not swimming) baths, cloakroom charges, bank and legal charges; library subscriptions).

*Table 2 only.

## (b) Income codes used for summarising income records in 1964

The contents of column 2 of this section of Appendix I give details of the individual codes which are used to provide the eight main sources of household income shown in Tables R-T on pages 14-19; and the average household income for each of the groups of households separately distinguished in expenditure tables 2-12. Although the more detailed analyses are not published in this Report, so far as possible they will be supplied on request as will the average head of household income for the separate groups of households in the expenditure tables.

| MAIN SOURCES OF INCOME |
| :--- |
| Wages and salaries of employees working 11 |
| or more hours a week |

Self-employment income

Income from investments

Income from non-State pensions and annuities

State Retirement, Old Age and Widows'
Pensions

Interest, after tax, on building society shares and deposits.
Interest on co-operative society shares and deposits, including dividends on purchases.
Interest on bank deposits and savings accounts, including Post Office Savings bank.
Interest on Defence Bonds and War Loans.
Interest and dividends, after tax, from stocks, shares, bonds, debentures and any other securities.
Tax deducted at source from shares, trusts, etc.
Income from trust or covenant.
Rent or income from property (not own residence) after deducting expenses allowed for income tax.
Other unearned income.
Pensions from central or local government services or from the armed forces.
Other pensions.
Income tax deducted from pensions. Annuities.

Retirement pensions.
Old age or widows' pension.
(3)

EXPLANATORY NOTES

As in previous years the wage or salary has been calculated by adding to the normal ' take-home,' pay deductions at source and also the weekly value of substantial bonuses or other occasional additions to earnings.

If a worker has been away from work without pay for less than 14 weeks, his normal wage is taken into account in the income calculation in preference to any state benefit which he may be receiving temporarily as an alternative. If, however, a worker has been away from work without pay for 14 weeks or more, his normal wage is disregarded and his current state benefits are taken instead.

This is the gross annual income for the latest available year after deducting depreciation allowances and business expenses.
MAIN SOURCES OF INCOME
Other state benefits
Income from sub-letting and/or owner
occupation

Income from other sources

Family allowance.
Disablement pension.
War disability pension or allowance.
Unemployment benefit.
Sickness benefit.
Industrial Injury benefit.
National Assistance.
Any other benefits.
For rented (or rent-free) dwelling, any excess of rent received over rent, rates and water charges, etc. paid out.
For owner-occupied dwelling, either rateable value of dwelling occupied or the excess of rent received over the sum of ground rent, rates and water charges and insurance on dwelling whichever is the greater.

Wage or salary of person working 10 hours a week or less.
Married woman's allowance from absent husband.
Allowances from members of the armed forces or merchant navy (excluding husband) who are not members of household.
Money scholarship disbursed by member of household completing a personal schedule.
Alimony, separation allowances or any other money from friends or relatives outside the household.
Trade Union benefits.
Friendly Society benefits.
Other non-State benefits.
Other income from other sources.
Money scholarship disbursed by member of household not completing a personal schedule.
Other income of member of household not completing a personal schedule.
(3)

EXPLANATORY NOTES

Where husband is only away from home temporarily.
Excluding husband away from home temporarily.
e.g. Income from subsidiary occupation, odd jobs, fees.
e.g. School-children with spare-time jobs.

## (c) Information codes used in 1964

Details of the main characteristics of co-operating households are shown in Table A on page 3 of this Report. Distributions of some but not all of the additional information codes which are shown below have been provided in this Report for selected groups of households (see tables U-W on pages $20-29$ ). Further analyses which have not been published are available for certain of the information codes listed below for those groups of households which are separately distinguished in expenditure tables 2-12.

| (1) |  |
| :---: | :---: |
| description of items |  |
| Number of rooms in dwelling <br> Occupied solely by household. <br> Occupied jointly with other households <br> Let to other households Total number of rooms in dwelling or part of dwelling owned, rented or allotted rent-free to occupier |  |
|  |  |
|  |  |
|  |  |
|  |  |
| Numbers of households having selected goods <br> Telephone <br> Washing machine <br> Refrigerator <br> Car <br> Full or partial central heating. |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
| Amount of business or other recoverable expenses included in answers to earlier questions about housing expenditure Rent |  |
|  |  |
| Water charges |  |
| Insurance |  |
| Telephone |  |
|  |  |
| Electricity |  |
| Imputed value of free and concessionary goods |  |
| Concessionary coal |  |
| Concessionary coke |  |
| Free meals from employer |  |
| Meal vouchers from employer |  |
| Concessionary milk from employer |  |
| Concessionary potatoes from employer |  |
| Other cheap food from employer |  |
| School milk |  |
| Schools meals |  |
| National Milk Scheme milk |  |
| National Milk Scheme dried milk |  |
| Numbers of household members by employment status |  |
| Employer ( $\dagger$ ) |  |
| Working (or in business) on own account ( $\dagger$ ) |  |
| Employee at present in full-time employment ( $\dagger$ ) |  |
| Full-time employee temporarily away from work because of illness or other reason $(\dagger)$ |  |
| At present in part-time employment (over 10 but not more than 30 hours a week) $(\dagger)$ |  |
| Part-time employee temporarily away from work because of illness or other reason $(\dagger)$ |  |
| Retired from work( $\ddagger$ ). |  |
| Unoccupied( $\ddagger$ ) |  |
| Retired or unoccupied but regularly employed for 10 hours a week or less $(\dagger)$ |  |
| Retired or unoccupied but normally employed for 10 hours a week or less though temporarily away from work because of illness or other reason $(\dagger)$ |  |
| Number of hours worked by retired or unoccupied persons who normally work for 10 hours a week or less $(\dagger)$ |  |

## EXPLANATORY NOTES

Rooms include bathroom, kitchen, garage and exclude lavatory, scullery, and rooms used for business.
Means (but not distributions of numbers of rooms) are available for each group of households distinguished in the expenditure tables.

Having means having the item ordinarily continuously available whether or not it is actually owned, e.g. continuous use of firm's car, rent of washing machine on a continuous basis.

The total amounts recorded as having been spent on rent, rates, etc. are edited as necessary to eliminate any portion that is regarded as being a business or other recoverable expenses thus providing net figures of expenditure by private households for publication.
Note: Because of the nature of the question, business or other recoverable expenses which are not included in answers to earlier questions about housing expenditure will not be recorded. The amounts shown under this heading may therefore be understated.

Imputed values of concessionary goods are excluded from definitions of both income and expenditure in all the tables in this Report.
( $\dagger$ ) Total numbers only are available for each group of households which is separately distinguished in the expenditure tables.
( $\ddagger$ ) Distributions are available for each group of households which is separately distinguished in the expenditure tables.

## Appendix II <br> Standard Errors

The method of calculation of the standard errors which are contained in the following table is an approximate one, in that the co-operating households have been regarded as a representative sample, obtained by single-stage random selection, of all private households in the United Kingdom. The multi-stage sampling design, the stratification used in selecting households and the variations in the extent to which selected households in different groups co-operated have thus not been taken into account.

The method of calculation was as follows: the standard error of $\bar{e}=\sqrt{\frac{\Sigma(e-e)^{2}}{n(n-1)}}$ where
e represents the weekly expenditure of each individual household on the item or group of items,
e represents the mean weekly expenditure of all households on the item or group of items,
n represents the number of households, and
$\Sigma$ denotes summation over all households.
The percentage standard error of $\overline{\mathrm{e}}$ is the standard error of $\overline{\mathrm{e}}$ expressed as a percentage of $\overline{\mathrm{e}}$ given to the nearest integer. As it cannot be assumed that this method of calculation would be satisfactory for sub-groups of households, reliable estimates of the standard errors of the average weekly expenditures of sub-groups of households cannot be obtained directly from those relating to all co-operating households simply by adjustment for the numbers of households in the sub-groups. In the case of expenditures based on three-year averages, the related standard errors would be expected to be $\frac{1}{\sqrt{3}}$ times those shown in this appendix.
$\sqrt{\sqrt{3}}$
Percentage standard errors of expenditure of households in 1964 and numbers of households recording expenditure

[^24]:    *See note 7 on page 33 .

[^25]:    *This figure has a relatively high sampling error.

[^26]:    *See note 7 on page 33.

[^27]:    *This figure has a relatively high sampling error.
    $\dagger$ See note 10 on page 33 .
    $\ddagger$ Numbered 64A in earlier Reports.

[^28]:    *This figure has a relatively high sampling error.

[^29]:    *See note 7 on page 33.

[^30]:    *See note 10 on page 33.
    $\dagger$ This figure has a relatively high sampling error.
    $\ddagger$ Numbered 64A in earlier Reports.

[^31]:    *Including three households in this group with incomes below $£ 5$ which are not shown separately in this table.

[^32]:    *Including three households with incomes below $£ 5$ which are not shown separately in this table.
    $\dagger$ This figure has a relatively high sampling error.
    $\ddagger$ See note 10 on page 33 .

[^33]:    *Including three households with incomes below $£ 5$ which are not shown separately in this table.
    $\dagger$ This figure has a relatively high sampling error.

[^34]:    *Including twenty households with incomes below $£ 10$ which are not shown separately in this table.

[^35]:    *Including twenty households with incomes below $£ 10$ which are not shown separately in this table.
    $\dagger$ See note 10 on page 33 .
    $\ddagger$ This figure has a relatively high sampling error.
    §Numbered 64A in earlier Reports.

[^36]:    *Including twenty households with incomes below $£ 10$ which are not shown separately in this table.
    $\dagger$ This figure has a relatively high sampling error.

[^37]:    *Including eight households with income below $£ 10$ which are not shown separately in this table.
    $\dagger$ Figures are not shown as they relate to only one household.

[^38]:    *Including eight households with incomes below $£ 10$ which are not shown separately in this table.
    $\dagger$ See note 7 on page 33.

[^39]:    *Including eight households with incomes below $£ 10$ which are not shown separately in this table.
    $\dagger$ This figure has a relatively high sampling error.

[^40]:    *Including five households with incomes below $£ 10$ which are not shown separately in this table.
    $\dagger$ See note 7 on page 33.

[^41]:    *Including five households with incomes below $£ 10$ which are not shown separately in this table.
    $\dagger$ See note 10 on page 33.
    $\ddagger$ Numbered 64A in earlier Reports.

[^42]:    *Mortgage and other payments for purchase or alteration of dwellings are included in Item Giroup 97 on page 98.
    $\dagger$ The following additional housing expenditure codes are available for each of the different types of dwellings though they are not used in the calculations of housing costs as published-calculated rateable value applicable to portion of dwelling occupied, calculated rates and calculated rent (see paras. 23 and 24 on page 19 above).

[^43]:    *The expenditures shown for these groups are not comparable with those for earlier years. Prior to 1964 all patent fuels (including patent cokes) were included in Item Group 9. From 1964 onwards patent cokes are included in Item Group 10.

[^44]:    * The figures relate to households which recorded expenditure on the item group during the 14 days of record keeping and for groups marked* during longer or shorter periods. (See para. 3 on page 1 of this Report). Hire purchase transactions have not been identified * but recordings can cover periods of up to three months. (See definition 14, page 76 of Family Expenditure Survey Report for 1962).
    $\dagger$ The standard errors and average weekly expenditures for groups 1-5 above relate to the households within the specified groups. Standard errors and expenditures for all other groups in this table relate to the 3,244 households which co-operated in the 1964 Survey.
    $\ddagger$ A number of households showed no housing costs since the rent received from sub-letting exceeded the housing costs incurred.

[^45]:    *See footnote * on page 102.
    $\dagger$ See note 10 on page 33.
    $\ddagger$ Numbered 64A in earlier Reports.
