Correction Notice

Consumer Trends

No.56 Quarter 1 2010

Production errors were identified in the Consumer Trends 2010 Q1 release, originally published 15 July 2010. The errors were found in two disaggregated chain volume measures. The affected disaggregated series are 04.1.1 and 12.6.1. The error affects non-seasonal and seasonally adjusted data and also the implied deflator. Aggregated levels are not affected. These errors have been corrected.

Consumer Trends

Quarter 1 2010

No 56

Editor: Denise Blackmore

A National Statistics publication

National Statistics are produced to high professional standards set out in the National Statistics Code of Practice. They are produced free from political influence.

About us

The Office for National Statistics

The Office for National Statistics (ONS) is the executive office of the UK Statistics Authority, a non-ministerial department which reports directly to Parliament. ONS is the UK government's single largest statistical producer. It compiles information about the UK's society and economy which provides evidence for policy and decision-making and in the allocation of resources.

The Director of ONS is also the National Statistician.

Guide to this publication

Noticeboard

Date of this publication: 15 July 2010.

Revised data are included from 2006 quarter 1 and is consistent with the National Accounts Blue Book 2010. There are larger revisions than at other times of the year. The estimates reflect the incorporation of the annual benchmarked survey data for 2008 for the first time.

Household expenditure volume series are chainlinked annually. In addition to the above revisions, volume estimates have been re-referenced to reflect more recent price structures. Estimates in this issue are now based on 2006 price structures, i.e. the chained volume measure in 2006 equals the current price value of expenditure in 2006. This is the first publication using reference year 2006. In previous issues, the chain volume series have been referenced to 2005.

Growth in each year up to and including 2007 is calculated at average prices of the previous year. Growth from 2007 onwards is calculated at average prices of 2006. Volume series are additive only for the most recent periods; annual data for 2006 onwards and quarterly data for 2007 quarter 1 onwards.

The next issue of *Consumer Trends* will be available on 28 September 2010.

Consumer Trends presents comprehensive estimates of household final consumption expenditure, constructed to conform to the European System of Accounts 1995 (ESA 95) Classification Of Individual Consumption by Purpose (COICOP)

Definition of household consumption

A definition of household final consumption expenditure within the context of the UK national accounts is:

Personal expenditure on goods - durable, semi-durable and non-durable - and on services, including the imputed rent of owner-occupied dwellings, the administrative costs of non-life insurance and life insurance and superannuation schemes.

Business expenditure and expenses, interest and other transfer payments and capital expenditure on dwellings are all excluded from household consumption.

At **UK national** level, which represents final consumption expenditure in the UK and abroad by UK resident households, net tourism expenditure is included. This is excluded to produce the aggregate total **UK domestic** expenditure, representing final consumption expenditure in the UK by UK and foreign households. These and other points which affect the general definition of household final consumption expenditure are discussed in greater detail in Appendix A.

Sources of data

The quarterly and annual estimates of household final consumption expenditure at current and previous year prices are built up commodity by commodity from a variety of independent sources. Where more than one potential source is available the source used for a particular good or service is the one which is judged to provide the most reliable estimate of the level and changes in expenditure on that good or service. In some cases a combination of sources is employed so as to make the best use of the available information. Each component series within household final consumption expenditure is individually seasonally adjusted in current price and volume terms. The main sources of data for household final consumption expenditure are detailed in Appendix B.

COICOP

COICOP is one of the functional classifications in the System of National Accounts 1993, adapted for Europe as the European System of Accounts 1995.

As well as being used for Household Final Consumption Expenditure (HHFCE), as published in *Consumer Trends*, it is also used for household budget surveys, as adopted for the UK Living Costs and Food Survey, and international comparisons of Gross Domestic Product.

COICOP splits total HHFCE into 12 divisions **by purpose**:

- 01 Food and non-alcoholic beverages
- 02 Alcoholic beverages and tobacco
- 03 Clothing and footwear
- 04 Housing, water, electricity, gas and other fuels
- 05 Furnishings, household equipment and routine household maintenance
- 06 Health
- 07 Transport
- 08 Communication
- 09 Recreation and culture
- 10 Education
- 11 Restaurants and hotels
- 12 Miscellaneous goods and services

COICOP also identifies durable goods, semi-durable goods, non-durable goods and services within these divisions.

Consumer Trends uses COICOP Division numbers (with the grand total shown as 0) for the first set of tables. This is followed by tables grouping the estimates using initial letters:-

- TOUR for UK and foreign tourist expenditure
- OGS for goods and services summary
- TG for total goods
- DG for durable goods
- SDG for semi-durable goods
- NDG for non-durable goods
- SER for services
- OA for annual data summary
- OGSA for goods and services annual summary
- ALC for total alcoholic beverages
- DET for selected detailed components
- ADD for additional total requested by users

Each table has six variants, denoted by a suffix:-

- CN for current prices, not seasonally adjusted
- CS for current prices, seasonally adjusted
- KN for chained volumes, not seasonally adjusted

- KS for chained volumes, seasonally adjusted
- DN for implied deflators, not seasonally adjusted
- DS for implied deflators, seasonally adjusted

The *Consumer Trends* briefing article and the information covered by the three regular appendices (A: Definitions and conventions; B: Sources; and C: Classification of household consumption headings) reflects the COICOP classification.

More information on the detail contained within each COICOP division can be found in Appendix C, and at the United Nations Classifications Registry Online <http://esa.un.org/unsd/cr/registry>

Annual chain-linking

With the publication of the 2003 Q2 edition of *Consumer Trends* the volume measures of expenditure (shown in the .KN and .KS tables) moved to a calculation method using annual chain-linking. Previously, a fixed base methodology was used, in which expenditure on goods and services were valued at prices of a particular year, most recently 1995. Growth in expenditure since 1995 was measured in the same terms, with the relative importance of individual goods and services in the total being a reflection of expenditure on them in 1995.

The base year had previously been changed roughly every five years in a process known as re-basing. Earlier time periods used expenditure shares from 1990, 1985 and so on to weight together the various goods and services purchased. Under annual chain linking, re-basing is carried out every year, with growth being measured by re-valuing current period expenditure at average prices prevailing in the previous year and comparing the result with actual expenditure in the previous year. The weight given to individual goods and services within the total is updated every year. In this way changes in the structure of the economy are reflected in statistics of growth at a much earlier stage than previously.

The move to annual chain-linking involved a change in the reference year used for volume series. The reference year is the one in which current price series and the corresponding volume measures equal each other in £ (or take the value 100 in index number form). This year is now 2006.

Although the use of chain-linking produces more accurate growth rates there is a loss of additivity for the volume series. This means that components no longer sum to the totals before 2006 for the annual figures and 2007 for the quarters.

The volume series are now referred to as chained volume measures (CVM) in £ million rather than constant prices. The individual series identifiers did not change from the previous 1995-based ones.

Revisions analysis

An analysis of revisions to the key household expenditure series - growth rates of total expenditure at current prices and in chained volume terms - appears at the end of the following article entitled *Consumer Trends briefing*.

Consumer Trends on the Internet

In line with other National Statistics publications, *Consumer Trends* is published on the National Statistics website. It can be found at:-

Consumer Trends Briefing

Total expenditure

[All comment below relates to data in volume terms, seasonally adjusted, unless otherwise indicated].

In the first quarter of 2010, household final consumption expenditure grew by 1.6 per cent at current prices and fell by 0.1 per cent in volume terms. In the fourth quarter of 2009, expenditure grew by 1.7 per cent at current prices and 0.6 per cent in volume terms (Chart C1). When comparing quarter one 2010 with the same quarter of the previous year, there has been a fall of 0.2 per cent.

Chart C1
Household final consumption expenditure
 Growth rates on previous quarter
 Seasonally adjusted, percentage change

In the first quarter of 2010 expenditure on goods grew by 0.2 per cent. There has been an increase in expenditure on semi durable and non durable goods of 1.2 per cent and 1.7 per cent respectively. This has been partially offset by a decrease in durable goods of 3.2 per cent.

Expenditure on services fell by 0.9 per cent in the same period, following a fall of 0.6 per cent in the previous quarter.

In the first quarter of 2010 the main areas of growth (when comparing levels of expenditure) were

clothing and footwear, which grew by 3.5 per cent and housing which grew by 0.7 per cent.

These increases were offset by a large decrease in spending on transport, which fell by 2.2 per cent and recreation and culture which fell by 2.3 per cent.

Household final consumption expenditure in 2009 fell by 3.4 per cent, having risen by 0.6 per cent in 2008. The major drivers of this decrease were transport, miscellaneous goods and services and restaurants and hotels, which fell by 5.6 per cent, 4.5 per cent and 6.0 per cent respectively. Not all areas showed falls however, with recreation and culture and clothing and footwear showing the largest increases of 2.4 per cent and 4.8 per cent respectively.

Growth by purpose

Chart C2 and C3 shows, for each division within COICOP, the quarter on previous quarter percentage change and quarter on corresponding quarter of the previous year percentage change respectively.

Deflators

Implied deflator

The implied deflators are calculated by dividing expenditure at current prices by expenditure in volume terms. Changes reflect both price movements and changes in the expenditure on commodities relative to one another.

The implied deflator grew by 1.7 per cent in the first quarter of 2010, following a growth of 1.0 per cent in the previous quarter (Chart 4). The durable goods deflator grew by 1.4 per cent following growth of 0.7 per cent in the previous quarter. The semi-durable goods deflator grew by 0.7 per cent following growth of 0.5 per cent in quarter four. The deflator for non-durable goods grew by 1.9 per cent following growth of 1.4 per cent in the previous quarter. The services deflator grew by 2.3 per cent, following growth of 1.5 per cent in the previous quarter.

Source deflators

Most of household expenditure is deflated by low level components of the Retail Prices Index (RPI) and Consumer Prices Index (CPI).

Durable goods

Quarterly growth

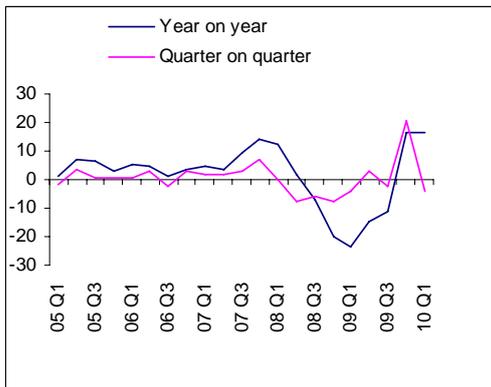

Expenditure on durable goods in the first quarter of 2010 fell by 3.2 per cent (Chart C7). When compared to the corresponding quarter of the previous year, durable goods grew by 9.2 per cent.

Chart C7
Durable goods, growth rates
 Seasonally adjusted, chained volume measure

The fall in durable goods was driven by decreased spending on transport, which fell by 4.1 per cent (Chart C8). Year on year growth has risen by 16.4 per cent.

Chart C8
Transport, growth rates

 Percentage change

The fall in transport was mainly due to decreased spending on cars, which fell by 4.0 per cent. Recreation and culture also fell by 4.3 per cent, caused by decreased spending on information processing equipment which fell by 10.3 per cent.

Annual growth

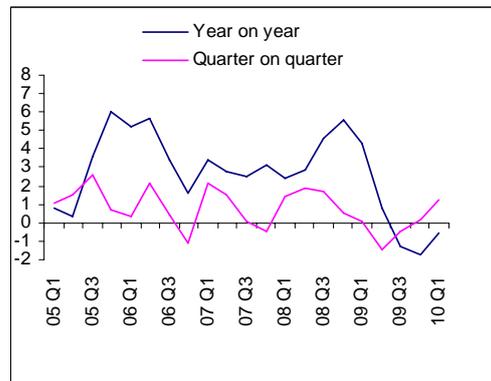

Spending on durable goods in 2009 fell by 1.1 per cent, following growth of 3.0 per cent in 2008.

Semi-durable goods

Quarterly growth

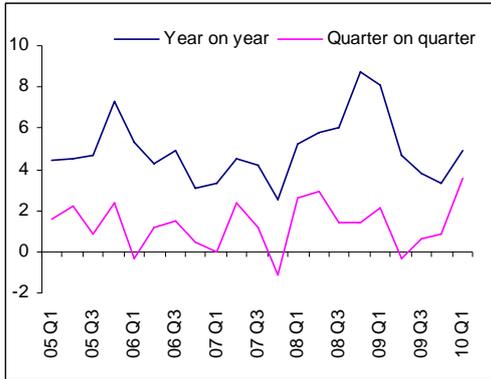

In the first quarter of 2010, expenditure on semi-durable goods rose by 1.2 per cent (Chart C9). Spending fell by 0.6 per cent compared to the corresponding quarter of the previous year.

Chart C9

Annual growth

Spending on non-durable goods fell by 4.2 per cent in 2009 down from a fall of 0.9 per cent in 2008.

Services

Quarterly growth

In the first quarter of 2010 expenditure on services fell by 0.9 per cent. This was a fall of 2.5 per cent when compared to the corresponding quarter of the previous year (Chart C13).

Chart C13
Services, growth rates

Percentage change

Miscellaneous services fell by 0.8 per cent mainly due to reduced spending on financial services which fell by 3.0 per cent. This large fall was partially offset by an increase in spending on insurance, which rose by 2.1 per cent in the current quarter.

Annual growth

Growth in services expenditure fell by 2.6 per cent in 2009, following a fall of 0.1 per cent in 2008.

Tourism

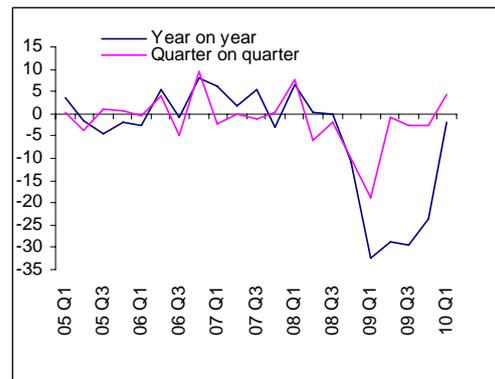

Quarterly growth

UK tourist expenditure abroad grew by 4.3 per cent in the first quarter of 2010, following a fall of 2.7 per cent in the previous quarter (Chart C15).

Foreign tourist expenditure in the UK fell by 3.8 per cent in the current quarter, following a fall of 1.2 per cent in the previous quarter.

Long term trends

Long run quarterly and annual data are obtainable for most of the series in *Consumer Trends* - for details see the guide to this publication. These indicate the pattern of changes to trends in household expenditure over time.

In current price terms, the share of total spending in 1970 on services was 35 per cent. This has risen continually over time to reach 52 per cent in 2009. Tourism which in 1970 had no significant share, has also increased over time to 1 per cent. As spending on services and tourism has increased, there has been a corresponding fall in the share of spending on goods; over the same period, the share of household expenditure on non-durable goods fell from 41 per cent to 26 per cent. Semi-durable goods have fallen from 14 per cent to 11 per cent and durable goods

have remained constant at 10 per cent of total share (Chart C16).

Current prices, annual data

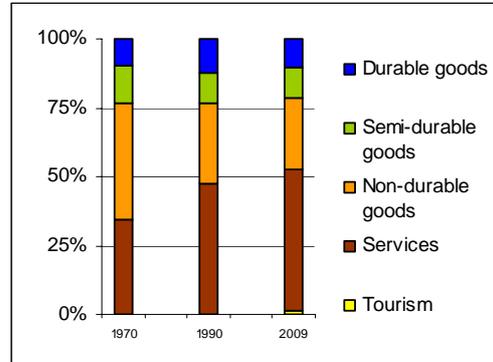

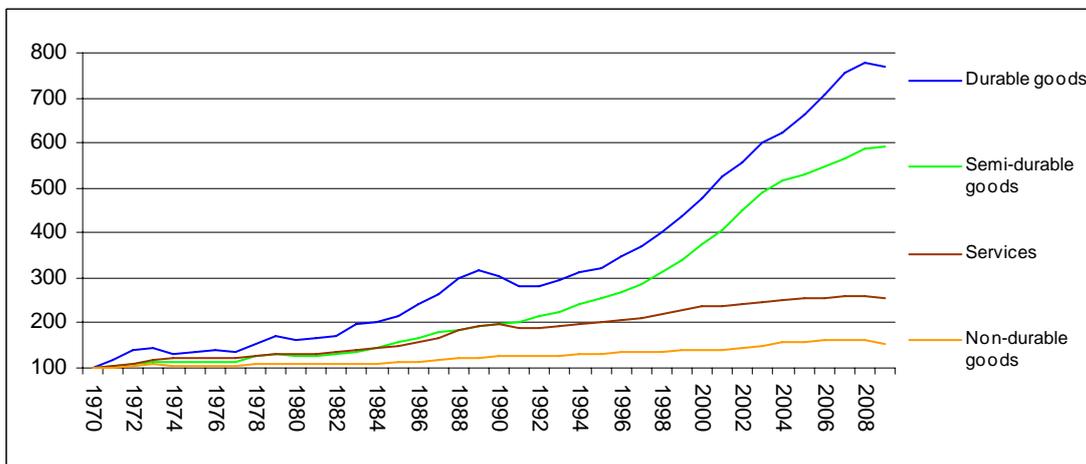

Chart C17
Household final consumption expenditure 1970-2009

Chained volume measures annual data
Index Numbers (1970 = 100)

The different patterns of growth for the four main groups of goods and services can be seen in Chart C17, in volume terms. Spending on durable goods, while erratic, has risen at the highest rate since 1970, closely followed by semi-durable goods.

Since 1990, the growth rate of services has slowed down after matching the growth rate of semi-durable goods between 1970 and 1990. Non-durable goods, which include food and drink, utilities and vehicle fuels, have shown minor fluctuations, but overall remained constant during this period.

Revisions

In common with all components of UK gross domestic product (GDP), household final consumption expenditure is subject to the revisions policy of the national accounts. This allows revisions to earlier data to be made only at particular times of the year.

As well as re-referencing to 2006 prices (see guide to this publication for more details) revisions since the last edition of Consumer Trends, published in March 2010, are summarised in table 1. As well as incorporating the Annual Business Survey results for 2008 and other updated data from suppliers, data may also have been revised to include adjustments required by the GDP balancing process.

Appendix A: Definitions and conventions

This appendix describes a number of issues of coverage, definition and presentation of the main statistical series appearing in Consumer Trends. More detail is contained in UK National Accounts Concepts, Sources and Methods, particularly Chapter 22 and the annex to it, - published by the Stationery Office price £75 - ISBN 0 11 621062 1.

It is also available to download from the National statistics website at:-

Household Final Consumption Expenditure

Household final consumption expenditure represents, in the main, traditional consumer spending. It includes imputed rent for the provision of owner-occupied housing services and consumption of own production.

For national accounting purposes, households are individuals or groups of people sharing living accommodation and, possibly, other aspects of daily life such as meals. The household sector thus includes not only those living in traditional households, but also those people living in institutions, such as retirement homes, boarding houses or prisons. Household final consumption expenditure covers the purchase of all goods and services, including housing services, to meet their requirements for day-to-day living. It does not include the purchase of dwellings or expenditure on valuables (antiques and some jewellery), which are part of capital formation, nor does it include any expenditure on goods or services for use in a business.

Household consumption includes goods and services received by households as income in kind, in lieu of cash. The same estimates are also included, for consistency, as part of output for the production measure and within compensation of employees in the income estimates of gross domestic product.

The accounts relate to consumption expenditure by UK resident households, which can take place either in the UK or the rest of the world. Spending by non-

residents in the UK is excluded from the total. The UK consumption expenditure which takes place in the rest of the world is regarded as an import of services to the UK. Correspondingly, consumption expenditure in the UK by households resident in the rest of the world is regarded as an UK export of services in the national accounts. Thus, total final consumption expenditure in the UK by all households has to have imports of services added and exports deducted in order to arrive at UK household final consumption expenditure for the national accounts. Historically, UK household expenditure data have been compiled by this route, starting with the so-called "domestic concept" and moving to the "national concept".

Classification of individual consumption

For presentation purposes, household final consumption expenditure is broken down according to COICOP. However, the underlying data series are assembled by a variety of methods and routes, depending on the data sources used. As a result, some of the historic details in the COICOP presentation are derived from older presentations used for UK purposes. Direct collection of data using the COICOP framework was introduced during 2001 and historic COICOP estimates continue to be reviewed as necessary in the light of recent data and in accordance with the revisions policy for the national accounts.

Business expenditure and expenses

Household final consumption excludes any business expenditure incurred by the household as part of the economic activity of unincorporated businesses. Such expenditure is included in household intermediate consumption. Also excluded from household final consumption is any business expenditure which might otherwise be claimed for tax purposes, for example, on cars.

Household final consumption expenditure does not cover the whole of expenditure on consumer type goods and services. Where methods of estimation rely on total supplies or sales, for example the ONS

Annual Business and Retail Sales Inquiries, purchases by businesses must be excluded, but in practice this can be done only roughly.

Income in kind

Household consumption includes a wide range of goods and services received by households as income in kind, in lieu of cash. The main items are the use of company cars for private purposes, and free or subsidised accommodation or meals.

Own account production

Household production of goods and certain services for own consumption is included in household consumption. The main items are owner-occupied housing services, domestic service and agricultural produce. Consumption of own account agricultural production is included within the food items. The employment of paid domestic staff, such as servants and gardeners, is regarded as part of household consumption. However, where such work is undertaken by members of the household for the household, the activity is not part of consumption.

Second-hand goods

The estimates of household consumption are net of sales of second-hand goods. Where the sale of such goods is between households, neither the sale nor the purchase is recorded in household consumption (since they cancel each other out). However, where purchases are made from dealers, the figures include the net value of the dealers' margins. Where transactions are with other sectors, such as the purchase of a second-hand company car, the full value of the purchase is recorded in household consumption (while the sale value would have been included as negative capital formation). See also *Valuables* below.

Games of chance (betting and gaming)

Household expenditure on games of chance, including the national lottery, is defined as the amount staked less the amount returned in winnings, representing, essentially, the cost of the service. In the case of the National Lottery this is ticket sales less prizes.

Insurance

Insurance premiums are composite payments, which consist of a charge for the service of insuring, a payment covering the risk insured and, in the case of life assurance and pension schemes, a substantial element of saving. Only the first of these elements is included in household expenditure. For non-life insurance an imputed "premium supplement" must be added to the gross premiums actually paid so as to calculate the service charge. This supplement represents all property income received from investing any reserves held by the insurance company but deemed to belong to policy holders. Without this income the company would have to charge higher premiums to cover its charges.

Fees paid to general government

Households make certain payments to government to obtain various kinds of licences, permits, certificates or passports. In the accounts, some of these payments are treated as taxes and the rest as household consumption. In broad terms, if licences are granted automatically on receipt of the due fee, then the payment is regarded as a tax. However, where government uses the issue of a licence to undertake some regulatory function, the payments are treated as household expenditure. Thus, payments for owning and using vehicles, boats and aircraft, TV licences and also for licences to hunt, shoot and fish are all to be regarded as taxes. All other payments are included within household consumption.

Fines paid direct to general government are regarded as transfers and are outside the scope of household consumption.

Interest payments

Interest payments in general, though part of a household's spending, are treated as distributive transactions of property income in the economic accounts and not part of household consumption. This applies to all interest payments on loans or credit purchase arrangements except where the credit is extended by the retailer and is included in the amount charged for the goods.

Imputed rentals for owner-occupied dwellings

One particular feature of the household sector is that owner-occupiers are deemed to be unincorporated businesses producing housing services which they then consume. This requires imputing a rental payment to the owner-occupied sector, analogous to the activity of payment of market or public sector rentals. The main reason for this approach is to minimise distortions to the consumption and GDP figures which would otherwise arise when there were changes in housing tenure, for example from rented to owner-occupied.

In the UK national accounts, as required by a European Commission Decision, rentals for owner occupied dwellings are imputed from actual rents charged (plus housing subsidies where appropriate) for tenanted dwellings. However, imputed rentals are then shown in the accounts after deduction of maintenance, repair and structural insurance expenditure incurred by owner occupiers. Expenditure on those items is recorded separately under the relevant COICOP headings (04.3 and 12.5.2).

Other imputed rentals

In the same way as for owner occupied dwellings, rentals are also imputed for dwellings occupied by tenant households paying very little or no rent. Examples are dwellings provided "free" as part of compensation for employment.

Capital expenditure on dwellings

Expenditure on the purchase of dwellings, including any transfer costs, or on major improvements to existing dwellings, is not part of household consumption, but is included in gross fixed capital formation (GFCF).

Durable goods

With the exception of GFCF on dwellings, household consumption embraces spending on all other durable goods, such as motor cars. In certain circumstances, such expenditure might be thought of, not as final

consumption, but as GFCF. However, to treat this expenditure in this way would require, say, the imputation of an annual amount representing the value of the benefit derived by the household from the goods, essentially as is done for owner-occupied dwellings. Such imputation would be far from easy. Expenditure is treated as household consumption spending. Nevertheless, to aid interpretation, durable goods items as determined within the COICOP are separately identified within household consumption. Semi-durable goods, non-durable goods and services are also identified separately.

Valuables

Valuables are items such as antiques and jewellery which are primarily held as a store of value and which do not decline in value over time. They are thus not consumed. A proportion of the sales of antiques dealers is deemed to represent the transfer costs of valuables and is excluded from household consumption and included in Gross Capital Formation.

Household consumption overseas and spending in the UK by non-residents

The UK national aggregate of household consumption in the accounts includes spending overseas by UK residents and excludes spending in the United Kingdom by non-residents. However, the data collected to estimate the UK domestic aggregate does the reverse: includes expenditure in the UK by non-residents and excludes expenditure outside the UK by UK residents. At present, these series are identified separately in the TOUR tables of this publication. There is no single COICOP division encompassing tourist expenditure.

Time of recording

Expenditure must be understood as the acquisition of goods and services rather than actual disbursements of cash in the period of account. It relates to the total value of goods acquired whether paid for outright or not. Thus when consumers buy on hire purchase or other forms of credit much of the payment may occur after the transaction is recorded. Similarly, contributions to Christmas or holiday funds are not in principle regarded as expenditure until goods or services are actually acquired. Payments in advance

are, in effect, regarded as saving and payments in arrears, dis-saving.

Final Consumption Expenditure of Non-Profit Institutions Serving Households

The final consumption expenditure of non-profit institutions serving households (NPISH) is separated from expenditure of households on goods and services. Final expenditure by NPISH is defined as expenditure on wages and salaries, etc. plus the imputed charge for capital consumption plus purchases of goods and services (including any taxes on expenditure) less sales of goods and services. It represents expenditure on goods and services which is paid for not by the beneficiaries directly but out of other resources available to the NPISH, for example gifts, endowments, property income, government grants, etc. Implicit in this approach is the assumption that NPISH are producers of goods and services as well as being consumers of them. NPISH include charities and colleges of further and higher education amongst many others.

Actual final consumption

Household final consumption expenditure includes only the direct spending of resident households.

Some of this spending is on goods and services, such as health and education, which are provided by both the market and the State. Household consumption includes only the former. However, spending by Government (and NPISH) on such goods and services is part of the provision of individual (as opposed to collective) goods and services by these sectors. This spending is included in final consumption expenditure of the providing sector. For these and other 'individual' components of spending, changes in the pattern of provision will clearly affect the level of the figures of household final consumption.

Thus, an alternative, wider concept of consumption has been established. This is called actual final consumption, and for households is defined as household final consumption expenditure plus government and NPISH individual consumption expenditure. Figures of actual final consumption are not affected by arrangements for who provides the good or service and are of use for comparative analyses of spending over time and between countries.

Appendix B: Sources

This section briefly describes the main sources of data used for each of the main headings appearing in the tables of this publication.

The method used for estimating each equivalent household final consumption series at chained volume measure depends on the methods used for the current price estimate. Generally the current price estimate in value terms is deflated by an appropriate price index. Unless otherwise noted below, the indices used for this purpose are components of the RPI, weighted as appropriate to reflect national accounting product groups. The RPI does not cover the whole range of household final consumption and other indices have to be used or estimated where necessary. Similarly where the current price estimate is not in value terms other methods have to be adopted. These are detailed in *United Kingdom National Accounts - Concepts, Sources and Methods*, which is published by The Stationery Office. It is available electronically at:-

www.statistics.gov.uk/downloads/theme_economy/Concepts_Sources_&_Methods.pdf

Chained volume measure series are estimates of the volume of expenditure expressed in the average prices prevailing in the reference year of 2005.

Tables 0.CN - 0.DS

Summary of household consumption

These tables summarise the totals from:

COICOP Division tables 01.CN-12.DS

Details of the components of each division can be found under the GS tables, covering durable, non-durable and semi-durable goods and services, below.

Also included directly after the divisional tables are:

TOUR - UK and foreign tourist expenditure

Estimates for foreign tourist expenditure and UK tourist expenditure abroad are based on the IPS. Special price deflators are constructed by ONS for the purposes of revaluing foreign tourists' expenditure to volume terms. For UK tourist expenditure abroad, retail price indices are available for most of the countries visited and special indices are constructed by ONS to represent the kind of goods and services likely to be bought by UK travellers overseas.

GS tables

Goods and services summary tables, which are further broken down into the following:-

DG - Durable goods

SDG - Semi-durable goods

NDG - Non-durable goods

SER - Services

DG - Durable goods

Durable goods are goods that can be used continuously over a period of time, usually three years or more. They also have a high price relative to other goods.

Most durable goods data in this table except for cars are based on the ABI to retailers and others with retail activity. Quarterly estimates are derived from the RSI. The annual inquiries provide a breakdown of sales by commodity. The RSI collects total retail sales by type of retailer on a monthly basis. It is used to interpolate the ABI data and to project forward the commodity information obtained from the most recent annual inquiry.

Further subdivision by product is estimated using the more detailed expenditure data in the LCF. All durable goods listed below are estimated in this way, unless otherwise specified.

An article explaining, among other things, the similarities and differences between household expenditure estimates and the RSI was published on the ONS website in January 2005
http://www.statistics.gov.uk/articles/nojournal/Early_estimates_of_consumer_spend.pdf

DG Division 05 Furniture and furnishings

Furniture and furnishings include lights, lamps and pictures but exclude works of art and antiques.

Carpets and other floor coverings

This includes estimates for carpets and other floor coverings.

Major household appliances

These include appliances such as refrigerators, washing machines, cookers and vacuum cleaners.

Major tools and equipment

Estimates for major household tools and equipment eg major power tools.

DG Division 06

Therapeutic appliances and equipment

Estimates for therapeutic appliances and equipment are derived from the LCF.

DG Division 07 Purchase of vehicles

Information on the V55 Registration Document is used to measure the number of motor cars and motor cycles sold to private individuals. These are valued using trade information and include on-the-road costs other than vehicle excise duty. The method has been applied back to 1993. Prior to that, for motor cars, expenditure on new cars was taken as the residual after subtracting capital formation from the value of total new car registrations. Used vehicles are estimated from motor traders' data from the ABI. This heading also includes estimates for cars-in-kind (the imputed value of the use of company cars for private purposes), based on the taxable value of company cars as required by HMRC.

For motor cars there are two different methods of calculating growth to produce chained volume estimates. For new cars, expenditure is calculated by valuing registrations directly at current prices and prices of the previous year; for used cars, current price estimates are deflated by the RPI for used cars to derive estimates at previous year prices.

DG Division 08 Telephone and telefax equipment

Estimates for telephone and telefax equipment are based on the ABI and RSI.

DG Division 09

Unless otherwise indicated, all items in DG Division 09 are estimated using the ABI and RSI.

Audio visual equipment

This includes televisions, video recorders, CD players, sound systems and components and radios.

Photo and cinema equipment and optical instruments

This includes estimates for photo and cinema equipment and optical instruments.

Information processing equipment

This includes computers and software packages and other Information processing equipment.

Major durables for outdoor recreation

Estimates for major durables for outdoor recreation are based on the ABI and other sources as available.

Musical instruments and major durables for indoor recreation

Estimates for musical instruments and major durables for indoor recreation are derived from the ABI.

DG Division 12 Jewellery, clocks and watches

Estimates for jewellery, clocks and watches are based on the ABI and RSI and exclude antiques.

SDG - Semi-durable goods

Semi-durable goods differ from durable goods in that their expected lifetime of use, though more than one year, is often significantly shorter and their purchase price is substantially less than for durable goods.

The data are estimated from either the ABI and RSI or the LCF. Sources are listed below.

SDG Division 03 Clothing materials

Estimates for clothing materials are derived from the ABI and RSI.

Garments

Estimates for garments and footwear are based on the ABI and RSI.

Other articles of clothing and clothing accessories

Estimates for other articles of clothing and clothing accessories are derived from the ABI and RSI.

Shoes and other footwear

Estimates for shoes and other footwear are based on the ABI and RSI.

SDG Division 05 Household textiles

Estimates for household textiles are based on the ABI and RSI.

Small electric household appliances

Estimates for small electric household appliances are derived from the ABI and RSI.

Glassware, tableware, household utensils

Estimates for glassware tableware and household utensils are based on the ABI and RSI.

Small tools and miscellaneous accessories

Estimates for small tools and miscellaneous accessories are derived from the ABI and RSI.

SDG Division 07 Motor vehicle spares

Estimates for motor vehicle spares are derived from the LCF.

SDG Division 09 Recording media

Estimates for recording media based on the ABI and RSI.

Games, toys and hobbies

Estimates for games, toys and hobbies are based on the ABI and RSI.

Equipment for sport, camping and open-air recreation

Estimates for equipment for sport, camping and open-air recreation are derived from the ABI and RSI.

Books

Estimates for books are derived from the LCF.

SDG Division 12

Electric appliances for personal care

Estimates for electric appliances for personal care are derived from the ABI and RSI.

Other personal effects

Estimates for other personal effects are based on the ABI and RSI.

NDG - Non-durable goods

Non-durable goods are goods that can be used only once. They include food and all types of drink.

Data come from several sources which are listed below.

NDG Division 01

Food and non alcoholic beverages

The main data source for food estimates is the LCF. The LCF provides a detailed record of expenditure on food brought into the home.

Expenditure on food outside the home (e.g. in restaurants), with the exception of "casual" purchases of confectionery, soft drinks and ice cream, is included under catering services.

Relevant components of the RPI are used to deflate expenditure at current prices to derive chained volume measures.

NDG Division 02

Alcoholic beverages and tobacco

Estimates for alcoholic beverages are based on volume of sales and average prices of individual types of alcoholic beverages for "off-licence" trades. This information is obtained from a continuous survey of retail outlets.

The volume data extracted from this survey are grossed up to align with monthly figures obtained from HMRC relating to the quantities of alcoholic drink released for sale within the UK. The price data obtained from the survey are used to derive both current expenditure and estimates at previous year prices in order to derive chained volume measures.

Separate data are provided for outlets licensed to sell for consumption off the premises ("off-licence trade"

– retail shops etc) from those licensed for consumption of alcohol on the premises ("licensed trade" – restaurants, public houses etc). This information has been used to derive separate estimates of household expenditure for the two appropriate COICOP categories: 2.1 alcoholic beverages – "off-licence trade"; and 11.1.1 restaurants, cafés, pubs and the like – "licensed trade". The overall totals for expenditure on alcoholic drink are summarised in separate tables **ALC.CN-ALC.DS** after the main household expenditure tables.

Estimates for tobacco are based on data obtained from HMRC relating to the quantities of tobacco released for sale within the UK. Relevant components of the RPI are used to convert this volume data into current and chained volume measure estimates.

Estimates of household expenditure on alcoholic drink and tobacco smuggled into the UK are also being made from 1994. These are based on HMRC intelligence on the level of smuggling, including freight smuggling and diversion fraud, taking place together with assumptions on the prices at which the goods are sold to final consumers through different types of outlet. For alcohol, retail shops and restaurants are assumed to sell the goods at the same prices as the rest of their stock. For "street" sales (i.e. not through off-licences or restaurants), 70% of the average legal UK price is used for beer and 115% of the French prices (published by the French Statistical Institute, INSEE) for wines and spirits.

For tobacco, the prices at which smuggled goods are bought by UK households are assumed to be slightly above Belgian market prices, although the goods are not necessarily regarded as having been sourced from Belgium.

**NDG Division 04
Materials for the maintenance and repair of
the dwelling**

Estimates for materials for the maintenance and repair of the dwelling are based on the ABI and RSI.

Water supply

Estimates for water supply are based on data supplied by OFWAT and the Scottish Executive. The chained volume estimates are based on movements in domestic rateable values up to 1995. Thereafter, the appropriate component of the RPI is used to deflate the current price series.

Electricity, gas and other fuels

Estimates for electricity, gas and other fuels are based on data obtained by the BERR from various energy suppliers. Relevant components of the RPI are used to deflate current expenditure and derive chained volume measures.

**NDG Division 05
Non-durable household goods**

Estimates for non-durable household goods (including cleaning products) are based on the LCF.

**NDG Division 06
Pharmaceutical and other medical products**

Estimates are based on the ABI and RSI or the LCF.

**NDG Division 07
Vehicle fuels and lubricants**

Estimates for vehicle fuels are based on data obtained by the BERR from various energy suppliers together with LCF data on household expenditure. Estimates for lubricants are based on the LCF. For vehicle fuels, average prices of the previous year are applied to volume data in order to obtain chained volume measures.

**NDG Division 09
Garden plants and flowers, pets and
newspapers**

Estimates are based on the LCF.

Stationery and drawing materials

Estimates are based on the ABI and RSI.

SER - Services

**SER Division 03
Clothing and hire of clothing**

Clothing and hire of clothing are based on the LCF.

Repair and hire of footwear

Repair and hire of footwear are based on the LCF.

**SER Division 04
Actual and imputed housing rentals**

Estimates for housing rentals make use of private sector data from the LCF and public sector rented dwellings data supplied by local authorities to the DCLG and to the Scottish Executive and the Wales and Northern Ireland Offices. Estimates of rent receipts by New Town corporations and other public corporations are also included.

A change to the method for calculating owner-occupiers' imputed rent was introduced in June 1996 for years subsequent to 1990. Up to 1990, domestic rateable values provided the basis for estimating rental values for owner occupied property. Following the abolition of the rating system in Great Britain, and in accordance with a European Union Council Decision under the GNP Directive, a new benchmark establishing the value of imputed rents was set for 1991.

This has subsequently been updated to 2001, using information on the dwelling stock from the 2001 Census together with survey and official data on rents. Estimates of imputed rents are based on an econometric regression model, which uses certain characteristics of dwellings to link owner-occupied and rent-free dwellings to rented properties in the social and private rented sectors. This benchmark is then projected forward using numbers and sizes of owner-occupied dwellings and broadly comparable data on paid rents. The latest benchmarking was described in an article in the April 2005 edition of *Economic Trends*

http://www.statistics.gov.uk/articles/economic_trends/ET617Richardson.pdf

In order to construct chained volume measures, the number of occupied dwellings is used as a volume indicator. This indicator is based on total housing stock data, less estimates of unoccupied dwellings, supplied by the DCLG and adjusted by a quality factor to take account of overall improvements in the housing stock over time.

Services for maintenance and repair of the dwelling

Estimates for services for maintenance and repair of the dwelling are based on the LCF. They include expenditure by householders and, under insurance policies, by insurers.

Refuse collection

Estimates for refuse collection are based on the LCF.

Sewerage collection

Estimates for sewerage collection are based on the data supplied by OFWAT and the Scottish Executive. The methodology for deriving the chained volume measure is as described for water supply (NDG Division 04), above.

SER Division 05 Repair of furniture, furnishings and floor coverings

Estimates for repair of furniture, furnishings and floor coverings are based on the LCF.

Repair of household appliances

Estimates for repair of household appliances are based on the LCF.

Domestic and household services

Estimates for domestic and household and services are mainly based on the LCF.

SER Division 06

Outpatient and hospital services

Estimates for NHS payments and private medicine are based on DH data and the LCF respectively. Estimates for medical insurance are based on a survey of companies conducted by the DH and information on premiums is provided by the Association of British Insurers. For NHS payments and medical insurance, average prices of the previous years are applied to volume data in order to obtain chained volume measures. For private medicine, relevant components of the RPI are used to deflate to chained volume measure. Estimates for dental services are based on the LCF and DH data. Paramedical services are based on the LCF and hospital services are based on the LCF and DH data.

SER Division 07

Vehicle maintenance and repair and other vehicle services

Vehicle maintenance and repair also includes motoring organisation subscriptions. Data are obtained from the LCF.

Other vehicle services include cherished number plates, which are based upon data collected by the DVLA. Driving licences are based on administrative records; they are deflated by an appropriate price index. Estimates for other components are largely based on the LCF. These include driving lessons and tests and self-drive car hire.

Transport services

Estimates for national railways travel are derived from the Strategic Rail Authority. Light rail, road and other transport services are largely based on data collected by the DfT. Estimates for air and sea travel are based on the IPS. The IPS is a continuous sample survey of passengers (both UK residents and non-residents) travelling between the UK and foreign countries. In order to construct chained volume measure estimates, the number of journeys, based on information collected by the IPS, is used as a volume indicator.

SER Division 08 Postal services

Estimates for postal services are based on the LCF.

Telephone and telefax services

Estimates for telephone and telefax services are based on trade and OFCOM (the industry regulator) data for fixed lines, including cable, and the LCF for mobile phones.

SER Division 09 Repair of audio visual, photographic and information processing equipment

Estimates for repair of audio-visual, photographic and information processing equipment are based on the LCF.

Maintenance and repair of other major durables for recreation and culture

Estimates for maintenance and repair of other major durables for recreation and culture are based on the LCF.

Veterinary and other services for pets

Estimates for veterinary and other services for pets are based on the LCF.

Recreational and sporting services

Estimates for recreational and sporting services are based on the LCF.

This heading includes services provided by sports stadia, horse-racing courses, motor-racing circuits, swimming pools, tennis courts, bowling alleys, gymnasia, fitness centres, fairs and amusement parks, ski facilities; hire of equipment and accessories for sport and recreation, such as sailing or camping, aerobics, weight-loss, dancing, music, skating, skiing and swimming; and services of tour guides, etc.

Cultural services

These include theatre and museum services, other admissions and social subscriptions; TV rental and repairs. Estimates for most of these are derived from the LCF.

Games of chance

Data for games of chance other than the National Lottery are based on duty receipts provided by HMRC. Estimates for the National Lottery are based on data obtained from the National Lottery Commission.

SER Division 10 Education

Estimates for education are based on the LCF, DIUS and DCSF data and, in the past, data received from the Higher Education Funding Council, the Independent Schools Information Service and fees charged by local authorities (derived from local government accounts).

SER Division 11

Catering and accommodation services

Household expenditure on catering services is based on the LCF. Information provided from commercial data on alcohol sales has been used to derive household expenditure class 11.1.1 restaurants, cafes etc. "licensed trade" (see notes under NDG Division 02 Alcoholic beverages, above).

Similar expenditure by students living in university or college accommodation is derived from surveys sponsored by the DIUS. MoD survey data is used to construct estimates of expenditure by military personnel residing in barracks. A number of different deflators, including relevant components of the RPI, are used to obtain chained volume measure estimates for catering.

SER Division 12 Hairdressing salons and personal grooming establishments

Estimates for hairdressing salons and personal grooming establishments are based on the LCF.

Social protection

Estimates for social protection, including childcare, are based on various sources, including the LCF. Estimates of expenditure by persons living in private residential and nursing homes are benchmarked on a 1993 survey of such establishments. Estimates for fees and charges paid by similar persons residing in Local Authority administered homes are based upon

data obtained from the DCLG, the Scottish Executive and the Wales Office.

Insurance and other financial services

Estimates for the administrative costs of life insurance and pension funds are largely based on inquiries conducted by the ONS and data published by the Association of British Insurers. An appropriate component of the Average Earnings Index is used to deflate current expenditure and derive a chained volume measure.

The *supply* of FISIM (excluding imports), is based on a total of interest receipts and payments, which are estimated from detailed data on stocks of loans and deposits and associated interest rates.

Estimates for stamp duties on securities make use of HMRC's data while estimates for securities dealers' commission are based on stock exchange information. For both stamp duties and securities dealers' commission, an index of share prices is used to deflate current expenditure to derive chained volume measures.

Estimates for other financial services use data provided by the Bank of England and several other sources. A number of different deflators are used to obtain chained volume measure estimates for financial services. Estimates for most components of non-life insurance are based on the LCF.

Other services

This includes estimates for undertaking, which makes use of the number of deaths data collected by ONS. A price deflator obtained from survey data is used to convert this volume data into both current and expenditure estimates.

Also included is expenditure on legal services and on photocopying services.

Tables 0A

Summary of household consumption Annual data

These tables summarise the annual totals, which are available back to 1963.

Tables 0GSA

Summary goods and services Annual data

These tables summarise annual goods and services classified by COICOP function back to 1963.

Tables ALC

Total alcoholic beverages

These tables sum the alcohol purchased in retail outlets ("off-licence trade") and that purchased in cafes, restaurants, pubs and hotels ("licensed trade").

Tables AT

Alcoholic drink and tobacco, including smuggled goods

These tables were last published in the Quarter 1 2006 edition of *Consumer Trends*. They indicate the size of the estimates for smuggled alcohol and tobacco included within COICOP Division 02 Alcoholic drink and tobacco and Division 11 Restaurants and hotels. Only annual estimates are produced, one year in arrears, by HMRC. The total household expenditure series in this issue of *Consumer Trends* do, however, include estimates for all periods up to the present.

The methodology for smuggled goods was described in an article on page 240 of the Quarter 1 2002 issue of *Consumer Trends*. Since that publication, the coverage of freight smuggling and diversion fraud in the estimates has been improved.

Table DET.CN

Selected detailed components

Table ADD.KS

Additional totals requested by users

These tables show a selection of series in long-run annual format and do not necessarily comprise all components of the identified COICOP headings. Quarterly data can be found on the ONS website.
