**A National Statistics publication**

National Statistics are produced to high professional  
standards set out in the National Statistics Code of  
Practice. They undergo regular quality assurance reviews  
to ensure that they meet customer needs. They are  
produced free from any political interference.

**About the Office for National Statistics**

The Office for National Statistics (ONS) is the government  
Agency responsible for compiling, analysing and  
disseminating many of the United Kingdom's economic,  
social and demo-graphic statistics, including the retail  
prices index, trade figures and labour market data, as well  
as the periodic census of the population and health  
statistics. The Director of ONS is also the National  
Statistician and the Registrar General for England and  
Wales, and the agency administers the statutory  
registration of births, marriages and deaths there.

## **BACKGROUND TO PRODUCER PRICES**

### **INTRODUCTION**

This publication contains price information from UK manufacturers and importers. Output data is based on the revised Standard Industrial Classification SIC(92), the import data is based on the Standard International Trade Classification SITC (R3) and the export data on the Combined Nomenclature (CN).

### **WHAT ARE PRODUCER PRICES?**

Producer Price Indices (PPIs) are a series of economic indicators that measure the price movement of goods bought and sold by UK manufacturers. It is a base weighted index working on the basket of goods concept. A wide range of representative products are selected and the prices of these goods collected each month. The movement in these prices are weighted to reflect the relative importance of the products in a chosen year (known as the base year) currently 2000. These are then aggregated for various sectors of industry to provide the published indices in the monitor.

The input PPIs (table 3) measure changes in the price of materials and fuel bought by manufacturers for processing. The output PPIs (table 4) indicate changes in the prices manufacturers charge for goods destined for the UK market as they leave the factory net of VAT and after discounts.

More information can be found on our website  
<http://www.statistics.gov.uk/ppi>

### **National Statistics Online:**

[www.statistics.gov.uk](http://www.statistics.gov.uk)

Users can download time series, cross sectional data and metadata from across the Government Statistical Service (GSS) using the search and index functions from the homepage. Many datasets can be downloaded, in whole or in part, and directory information for all GSS statistical resources can be consulted, including censuses, surveys, periodicals and enquiry services. Information is posted as PDF electronic documents or in XLS and CSV formats, compatible with most spreadsheet packages.

### **Time Series Data**

The Time Series data facility on the website provides access to around 40,000 time series, of primarily macro-economic data, drawn from the main tables in a range of our major economic and market publications. Users can download complete releases, or view and download customised selections of individual time series.

### How to use this Publication

#### Need Some Help?

This publication gives you all the available information on price data. However, if you have any technical queries the following help line is available and staff will be happy to take your call:

**☎ (01633) 812106**

For general enquiries and tables 1 to 6.

Alternatively you can email us at **ppi@ons.gov.uk**

#### Publication Dates

The dates on which this publication is available in 2004 are:

20 January 2004	18 May	21 September
17 February	22 June	19 October
16 March	20 July	16 November
27 April	17 August	21 December

#### What is MM22?

This publication is produced monthly and provides price movement data at all manufacturing, aggregated industry and product group level. It consists of data supplied from individual UK manufacturers, importers and exporters.

---

#### What's included?

The Producer Price Indices are calculated from the price movements of around 9,000 closely defined materials and products purchased (including imports) and manufactured by UK industry. This price data is converted into a basic set of price indices from which broad series are built up. Products destined for sale in the UK are grouped in accordance with the Standard Industrial Classification 1992 with weighting patterns based on overall purchases and sales by manufacturers within those groupings. The indices published in this monitor are widely used by business in price escalation clauses in contracts and for monitoring price movements in the products they trade.

A number of export price indices classified to the European harmonised tariff code system is published in table 6. Coverage is being extended to include other areas of manufacturing exports.

## **Special Indices**

NS can for a charge, make up a special index for you and provide regular monthly updates. For example you may wish to monitor the movement in price of a group of products from different sectors of this monitor or to use weighting patterns which more closely reflect your companies own trends of purchases or sales. In either case it is likely we can help.

If you would like more details of this service please call **(01633) 812106** or write to the following address **National Statistics, Publication Section, Room 1.162, Government Buildings, Cardiff Road, Newport, South Wales, NP10 8XG** or email us at [ppi@ons.gov.uk](mailto:ppi@ons.gov.uk)

---

## **What is Navidata?**

NS has a software package that will represent PPI datasets in a tabulation and graphical format. This software is available for purchase as a floppy disc and allows users to create tailor made datasets for comparison. For details of availability and prices or to place an order **Tel 020 7533 5675 or Fax 020 7533 5688.**

---

## **NOTES**

### **Reading the data**

These notes should help you interpret the information in the following tables.

---

## **What are Net Sector Output Indices?**

The weighting patterns used to calculate net sector output indices exclude transactions between companies classified to the same sector e.g. manufacturing sector or manufacturing excluding food, drink, tobacco and petroleum. For example, for Net Sector Output purposes, the value of an electronic component manufacturer's sales to a car manufacturer would be excluded from the weighting patterns used to derive final index values (thereby reflecting the value of sales to only those purchasers outside the manufacturing sector).

---

## **What are Gross Sector Output Indices?**

This series is found in tables 2 and 4 represents the price movement of goods sold within the UK by companies classified to manufacturing as defined by SIC(92). Weights are calculated on a gross basis i.e. all transactions are included in deriving the weighting patterns, including sales within the same industry.

---

**What are  
Input/Output  
Group Input  
Indices?**

This series represents the price movement of materials and fuels purchased by UK manufacturers and is found in table 3. The I/O group input series all include purchases of materials and fuel including those between manufacturers classified to the same sector of industry (e.g. one chemical manufacturer to another).

---

**How are  
Export Prices  
calculated?**

The Export Price Indices (EPIs) use broadly the same methodology as the PPI. A range of representative products are selected and the prices of these goods collected each month from established exporters within specified 6 digit tariff codes of the Harmonised System (HS). The movement in these prices are weighted to reflect the relative importance of these products and aggregated to 3 digit (CN) level to provide the published indices in table 6. The series are calculated on a base year of 2000=100.

---

**What about  
VAT and  
Excise Duties?**

All indices are compiled exclusive of Value Added Tax. Excise duties (on cigarettes, tobacco, alcoholic liquor and hydrocarbon oils) are included except where specified otherwise.

---

**What about  
Provisional  
Data?**

Indices for the latest two months are always provisional and flagged with a 'p' marker due to the level of imputation present for items where the latest prices are not available. This level of imputation reduces significantly for earlier months, allowing index data to be published as firm values.

---

**What about  
Revisions?**

Occasionally, information is received that produces a change in an index value that has already been published as firm. Where the change is significant, index values are recalculated and annotated with an 'r' marker.

---

**What about  
Price Changes?**

The monthly index data relates to an average calculation for the month. The effect of price changes occurring part way through the period will only be reflected in an index in the following month's publication.

---

**No Data?**

You will see that various symbols are used throughout this publication to provide meaning to the gaps in the data or where the quality of the index values is reduced. There are a number of these and the following key will provide an explanation:

**B** These index values are considered less reliable mainly due to the lack of market coverage.

---

**F** Indices labelled F in Table 4 are based on relatively few quotes and in the long term should not be relied upon for contractual purposes.

---

" These values have been suppressed because the index would risk disclosure of individual price movements.

---

**n.e.c.** Not elsewhere classified.

---

**Rebasing note**

Data contained in this publication has been rebased onto 2000=100. Further information on rebasing can be found under related links at [www.statistics.gov.uk/ppi](http://www.statistics.gov.uk/ppi)

## Linking Rebased Producer Prices

The Producer Prices are series of base-weighted indices resting on the ‘basket of goods’ concept, and regular five-yearly rebasings are carried out in order to reflect the changing pattern of industry’s sales and purchases in the index weights. This rebasing has switched to an index with a base of 2000=100 from its former base of 1995=100. This means that the fixed weights used to combine product indices into broader aggregates will reflect the pattern of transactions in 2000, rather than 1995.

### **To convert 2000=100 indices back onto a 1995=100 basis**

For those who are using the 1995=100 producer prices in long-term contracts and wish to extend the series beyond June 2003 (the latest month for which firm 1995=100 figures will be published), the following approach may be suitable.

First, select the nearest equivalent index published in the 2000=100 series and then calculate a linking factor as follows:

$$\frac{\text{1995}=100 \text{ index for June 2003}}{\text{Nearest equivalent } 2000=100 \text{ index for June 2003}}$$

Then simply multiply the 2000=100 index after June 2003 by this linking factor to extend the 1995=100 time series.

For example: 7209200000 (PLLU)

	June	July	August
1995=100*	109.9	110.2p	110.4p
2000=100	101.0	101.2	101.4p

\*As published in Business Monitor MM22 for August 2003.

The factor is calculated as  $109.9/101.0 = 1.088$  and figures for the 1995=100 extended series are calculated as follows:

$$\begin{array}{ll} \text{July} & 101.2 * 1.088 = 110.1 \\ \text{August} & 101.4 * 1.088 = 110.3 \end{array}$$

## Producer prices

### July 2004

The output price index for home sales of manufactured products rose 2.5 per cent in the year to July compared with a rise of 2.6 per cent in the year to June. Unadjusted, the index rose 0.1 per cent between June and July, mainly reflecting rises in other manufactured and metal product prices, being partially offset by a fall in petroleum product prices.

The output price index excluding excise duties (PPIY) rose 2.5 per cent in the year to July and seasonally adjusted rose 0.2 per cent between June and July.

**Output prices**  
12 months percentage change

The output price index excluding food, beverages, tobacco and petroleum rose 1.6 per cent in the year to July. In seasonally adjusted terms the index rose 0.3 per cent between June and July.

## Input prices: summary

The input price index for materials and fuels purchased by manufacturing industry rose 3.2 per cent in the year to July and rose 0.4 per cent between June and July. The rise in the input index between June and July mainly reflected price rises in crude oil and imported metals. Prices of imported materials as a whole (including imported crude oil) rose 0.1 per cent between June and July.

Seasonally adjusted the input price index rose 0.6 per cent between June and July.

The input price index for manufacturing industry excluding the food, beverages, tobacco and petroleum industries rose 1.0 per cent in the year to July. Seasonally adjusted the index rose 0.3 per cent between June and July.

### **Revisions (Tables 9R and 10R)**

For this release Tables 9R and 10R highlight revisions to price indices previously published in last month's First Release.

The revisions to headline price indices highlighted in Tables 9R and 10R were caused by changes to latest estimates as more price quotes are received and also revisions to seasonal adjustment factors which are re-estimated every month.

## Output prices: detail

The contributions to movements in the total output index by the main product groups over the last year and month (not seasonally adjusted) are:

## BACKGROUND NOTES

1. Index numbers shown in the main text of this First Release are on a net sector basis. The index for any sector relates only to transactions between that sector and other sectors: sales and purchases within sectors are excluded. However, the more detailed figures shown in Tables 5 and 7 are on a gross basis; that is, intra industry sales and purchases are included in each of these indices.
2. Indices relate to average prices for a month. The full effect of a price change occurring partway through any month will only be reflected in the following month's index.
3. All index numbers exclude VAT. Excise duties (on cigarettes, manufactured tobacco, alcoholic liquor and petroleum products) are included, except where labelled otherwise.
4. Status of figures and planned future revisions:-

Figures for the latest two months are provisional and the latest five months are subject to revisions in light of (a) late and revised contributor data and (b) revisions to seasonal adjustment factors which are re-estimated every month.

An annual seasonal adjustment review is planned for Autumn 2004. There are no other planned methodological changes in the next 12 months.

5. One indication of the reliability of the key indicators in this release can be obtained by monitoring the size of revisions. The table below records the size and pattern of revisions that have occurred over the last five years. Please note that these indicators only report summary measures for revisions. The revised data may itself, be subject to sampling or other sources of error. A statistical test has been applied to the average revision to find out if there is bias in the estimates. No statistical bias was identified.

	Value in latest period	Revisions between first publication and estimates twelve months later	
		Average over the last 5 years (bias)	Average over the last 5 years without regard to sign (average absolute revision)
Total output (PLLU) 12 months %	+2.5	-0.03	0.09
Total output (PLLU) 1 months %	+0.1	0.00	0.08
Total input (RNNK) 12 months %	+3.2	-0.23	0.67
Total input (RNNK) 1 months %	+0.4	-0.01	0.39

This table presents a summary of the differences between the first estimates published between July 1998 and June 2003 and the estimates published 12 months later. These numbers include revisions as a result of methodological changes made when the series were rebased to 2000=100 in October 2003. For more information see  
[http://www.statistics.gov.uk/articles/economic\\_trends/ETAugMorris.pdf](http://www.statistics.gov.uk/articles/economic_trends/ETAugMorris.pdf)

A spreadsheet giving these estimates and the calculations behind the averages in the table is available on the National Statistics website at  
<http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=790>

6. More information on the PPI, including the definition of the product groups on page 4 and 5 of this release and the input and output weights can be found under related links at [www.statistics.gov.uk/ppi](http://www.statistics.gov.uk/ppi)
7. The detailed input indices of prices of materials and fuels purchased by industry (table 7) do not include the Climate Change Levy. This is because each industry can in practice pay its own rate for the various forms of energy, depending on the various negotiated discounts (and exemptions) that apply.
8. The complete run of data in the tables of this First Release are also available to view and download in other electronic formats free of charge using the ONS Time Series Data website service. Users can download the complete release in a choice of zipped formats, or view and download their own selections of individual series. The Time Series Data service can be accessed at <http://www.statistics.gov.uk/timeseries>
9. Details of the policy governing the release of new data are available from the press office. Also available is a list of the names of those given pre-publication access to the contents of this release.
