About the Office for National Statistics

The Office for National Statistics (ONS) is the government Agency responsible for compiling, analysing and disseminating many of the United Kingdom's economic, social and demo-graphic statistics, including the retail prices index, trade figures and labour market data, as well as the periodic census of the population and health statistics. The Director of ONS is also the National Statistician and the Registrar General for England and Wales, and the agency administers the statutory registration of births, marriages and deaths there.

BACKGROUND TO PRODUCER PRICES

INTRODUCTION

This publication contains price information from UK manufacturers and importers. Output data is based on the revised Standard Industrial Classification SIC(92), the import data is based on the Standard International Trade Classification SITC (R3) and the export data on the Combined Nomenclature (CN).

WHAT ARE PRODUCER PRICES?

Producer Price Indices (PPIs) are a series of economic indicators that measure the price movement of goods bought and sold by UK manufacturers. It is a base weighted index working on the basket of goods concept. A wide range of representative products are selected and the prices of these goods collected each month. The movement in these prices are weighted to reflect the relative importance of the products in a chosen year (known as the base year) currently 1995. These are then aggregated for various sectors of industry to provide the published indices in the monitor.

The input PPIs (table 3) measure changes in the price of materials and fuel bought by manufacturers for processing. The output PPIs (table 4) indicate changes in the prices manufacturers charge for goods destined for the UK market as they leave the factory net of VAT and after discounts.

Time Series Data

Access to around 40,000 time series, of primarily macro-economic data, drawn from the main tables in a range of our major economic and market publications. Download complete releases, or view and download your own customised selection of individual time series.

Statbase®

Web-based access to time series, cross sectional data and metadata from across the Government Statistical Service (GSS), organised by theme and subject. Download many datasets, in whole or in part, or consult directory information for all GSS statistical resources, including censuses, surveys, periodicals and enquiry services. Information is posted as PDF electronic documents, or in XLS and CSV formats, compatible with most spreadsheet packages.

What is MM22?

This publication is produced monthly and provides price movement data at all manufacturing, aggregated industry and product group level. It consists of data supplied from individual UK manufacturers, importers and exporters.

What's included?

The Producer Price Indices are calculated from the price movements of around 9,000 closely defined materials and products purchased (including imports) and manufactured by UK industry. This price data is converted into a basic set of price indices from which broad series are built up. Products destined for sale in the UK are grouped in accordance with the Standard Industrial Classification 1992 with weighting patterns based on overall purchases and sales by manufacturers within those groupings. The indices published in this monitor are widely used by business in price escalation clauses in contracts and for monitoring price movements in the products they trade.

A number of export price indices classified to the European harmonised tariff code system is published in table 6. Coverage is being extended to include other areas of manufacturing exports.

Special Indices

NS can for a charge, make up a special index for you and provide regular monthly updates. For example you may wish to monitor the movement in price of a group of products from different sectors of this monitor or to use weighting patterns which more closely reflect your companies own trends of purchases or sales. In either case it is likely we can help.

If you would like more details of this service please call **(01633) 812106** or write to the following address **National Statistics, Publication Section, Room 1.162, Government Buildings, Cardiff Road, Newport, South Wales, NP10 8XG** or email us at ppi@ons.gov.uk

Statfax!?

It is possible to obtain a copy of the latest PPI First Release printed from your own fax machine just minutes after it is issued by polling **0906 7360 221**. This contains all the important headline data from producer prices and is updated within minutes of the figures being published.

What is Navidata?

NS has now launched a software package that will represent PPI datasets in a tabulation and graphical format. This software is available for purchase as a floppy disc and allows users to create tailor made datasets for comparison. For details of availability and prices or to place an order **Tel 020 7533 5675** or **Fax 020 7533 5688**.

NOTES

Reading the data

These notes should help you interpret the information in the following tables.

General Information

The weighting patterns used to calculate index values are sourced from several areas of NS. The Gross Sector Output Series are based on sales values (excluding exports) obtained from the annual and quarterly PRODCOM inquiries. Weights for Input/Output Group Input Indices are based on data produced by I/O section. The Net Sector Output Series weights are based upon the results of the Purchases and Prodcum Inquiry and Input/Output tables.

What is SIC (92)?

The PPI uses four main levels of classification as defined by the European Standard Industrial Classification SIC(92). They are: class level - 4 digit numeric; division level - 2 digit numeric; sub section – 2 digit alpha; section - 1digit alpha.

In table 1 there are three published numerical constituents of the SIC (92). Series of the form 6292----- are higher level indices on a net sector basis. Series of the form 6192----- and 6112----- are lower level indices calculated on a gross sector basis. For table 2, there are four published numerical constituents. They are 72092----- for the higher level indices on a net sector basis, followed by 71092-----, 7111----- and 7112----- on a gross sector basis. For table 3 (which is based on input/output groupings), the numerical constituents of the indices which are on a gross sector basis, begin with 6113 followed by a 2 digit group number.

The numerical constituents of the indices found in table 4 such as 1411000000 are broken down as follows: 14- the division (othermining and quarrying), 141- the group (quarrying of stone), 1411- the class (quarrying of stone for construction) and 141100---- the specific manufactured product. In addition, certain series are available below the 4 digit level.

What are Net Sector Output Indices?

The weighting patterns used to calculate net sector output indices exclude transactions between companies classified to the same sector e.g. manufacturing sector or manufacturing excluding food, drink, tobacco and petroleum. For example, for Net Sector Output purposes, the value of an electronic component manufacturer's sales to a car manufacturer would be excluded from the weighting patterns used to derive final index values (thereby reflecting the value of sales to only those purchasers outside the manufacturing sector).

What are Input/Output Group Input Indices?

This series represents the price movement of materials and fuels purchased by UK manufacturers and is found in table 3. The I/O group input series all include purchases of materials and fuel including those between manufacturers classified to the same sector of industry (eg one chemical manufacturer to another).

What are GrossSector Output Indices?

This series is found in table 4 and represents the price movement of goods sold within the UK by companies classified to manufacturing as defined by SIC(92). Weights are calculated on a gross basis i.e. all transactions are included in deriving the weighting patterns, including sales within the same industry.

**How are
Export Prices
calculated?**

The Export Price Indices (EPIs) use broadly the same methodology as the PPI. A range of representative products are selected and the prices of these goods collected each month from established exporters within specified 6 digit tariff codes of the Harmonised System (HS). The movement in these prices are weighted to reflect the relative importance of these products and aggregated to 3 digit (CN) level to provide the published indices in table 6. The series are calculated on a base year of 1995=100.

**What is the
Combined
Nomenclature?**

Trade headings, or the Combined Nomenclature (CN codes) as they are more widely recognised, are the eight digit European Community classification system of goods for overseas trade statistics. The numbering system used, corresponds to the codes in the Harmonised System (HS) which are used for international trade.

**What about
VAT and
Excise Duties?**

All indices are compiled exclusive of Value Added Tax. Excise duties (on cigarettes, tobacco, alcoholic liquor and hydrocarbon oils) are included except where specified otherwise. Please see separate note for information on Climate Change Levy.

**What about
Provisional
Data?**

Indices for the latest two months are always provisional and flagged with a 'p' marker due to the level of imputation present for items where the latest prices are not available. This level of imputation, reduces significantly for earlier months allowing index data to be published as firm values.

**What about
Revisions?**

Occasionally, information is received that produces a change in an index value that has already been published as firm. Where the change is significant, index values are recalculated and annotated with an 'r' marker.

**What about
Price Changes?**

The monthly index data relates to an average calculation for the month. The effect of price changes occurring part way through the period will only be reflected in an index in the following month's publication.

No Data?

You will see that various symbols are used throughout this publication to provide meaning to the gaps in the data or where the quality of the index values is reduced. There are a number of these and the following key will provide an explanation:

B These index values are considered less reliable mainly due to the lack of market coverage.

F Indices labelled F in Table 4 are based on relatively few quotes and in the long term should not be relied upon for contractual purposes.

" These values have been suppressed because the index would risk disclosure of individual price movements.

n.e.c. Not elsewhere classified.

Producer prices

May 2002

The output price index for home sales of manufactured products rose 0.1 per cent in the twelve months to May, compared with a rise of 0.2 per cent in the twelve months to April. Unadjusted, the index rose 0.3 per cent between April and May, partly reflecting rises in tobacco and other manufactured product prices.

If passed on in full the changes in excise duty on tobacco and alcohol announced in the Budget would have increased the index by about 0.05 per cent in May (in addition to the 0.04 per cent added in April).

The output price index excluding excise duties (PPIY) rose 0.1 per cent in the year to May and seasonally adjusted remained unchanged between April and May.

The output price index excluding food, beverages, tobacco and petroleum rose 0.4 per cent in the year to May. In seasonally adjusted terms the index rose 0.2 per cent between April and May.

Input prices : summary

The input price index for materials and fuels purchased by manufacturing industry fell 6.2 per cent in the year to May and fell 0.2 per cent between April and May. Between April and May there were falls in crude oil and fuel prices which were partially offset by a rise in the price of imported chemicals. Prices of imported materials as a whole (including oil) fell 0.1 per cent between April and May.

Seasonally adjusted the input price index fell 0.7 per cent between April and May.

The input price index for manufacturing industry excluding the food, beverages, tobacco and petroleum industries fell 4.2 per cent in the year to May. Seasonally adjusted the index rose 0.2 per cent between April and May.

The Aggregates Levy introduced in April is included in the input price indices for the first time in this month's First Release. Please see notes to editors paragraph 5 for full details.

 2. Including Aggregates Levy

BACKGROUND NOTES

1. Index numbers shown in the main text of this First Release are on a net sector basis. The index for any sector relates only to transactions between that sector and other sectors: sales and purchases within sectors are excluded. However, the more detailed figures shown in Tables 5 and 7 are on a gross basis; that is, intra industry sales and purchases are included in each of these indices.
2. The index for materials and fuels purchased by manufacturing industry is subject to large seasonal fluctuations. These mainly reflect variations in the cost of industrial electricity arising from the structure of the public electricity supply companies' tariffs and in prices of materials purchased by the food manufacturing industry.
3. Indices relate to average prices for a month. The full effect of a price change occurring partway through any month will only be reflected in the following month's index.
4. All index numbers exclude VAT. Excise duties (on cigarettes, manufactured tobacco, alcoholic liquor and petroleum products) are included, except where labelled otherwise.
5. The Aggregates Levy (on certain quarry products – sand, gravel and rock) was introduced in April 2002. These products are components of the input indices. Data inclusive of the Aggregates Levy have been used in these components for the first time in this month's Release (from April). The Levy is estimated to have added 0.14 index points to the main input index and 0.34 index points to the input index excluding food, beverages, tobacco and petroleum products. There are also some effects on output prices. Please see further details at www.statistics.gov.uk/ppi
6. More information on the PPI, including the definition of the product groups on page 3 and 4 of this release and the input and output weights can be found under articles and commentary at www.statistics.gov.uk/ppi
7. The Climate Change Levy (CCL) was introduced into the PPI in December 2001. The levy was introduced in April 2001 and only affects input producer prices. So for example, from April 2001 the headline input index and input index excluding food, beverages, tobacco and petroleum industries now include the CCL. The CCL has added between 0.8 and 0.9 per cent to the headline input index since April 2001.
8. The detailed input indices of prices of materials and fuels purchased by industry (table 7) do not include the CCL. This is because each industry can in practice pay its own rate for the various forms of energy, depending on the various negotiated discounts (and exemptions) that apply. DTI and ONS are unable to disaggregate CCL-inclusive industry input indices below manufacturing, although in the medium term it is hoped to study the feasibility of collecting the necessary information on energy prices for each industry.

9. Details of the policy governing the release of new data are available from the press office. Also available is a list of the names of those given pre-publication access to the contents of this release.

Aggregates Levy - May 2002 First Release

A new levy on the extraction of aggregates was introduced on 1 April 2002. The levy (charged at £1.60 per tonne) applies to sand, gravel and rock and is non-deductible. Products such as coal, metal ores, industrial minerals, materials used in production of lime and cement and dimension stone are not covered by the levy. In addition there is a phased introduction in Northern Ireland.

Impact on Manufacturing Output Prices

The high level PPI output indices only cover the manufacturing sector, so the aggregates industry (Division 14) is not included. However, within SIC Division 26 (other non-metallic minerals) there are a number of industries whose products use aggregates in the production process, most notably ready mix concrete and articles of concrete. Output prices for these products rose in April which reflected the introduction of the levy.

Impact on Mining and Quarrying Output Prices

An output index for Division 14 (other mining and quarrying) is included in table 5 of the release. This includes price quotes for the sale of extracted sand, gravel and rock which are directly affected by the new levy. Division 14 including the Levy is included in this release. An index for Division 14 excluding the Levy will be published in table 4 of "Producer Prices MM22".

Division 14 is not included in any of the higher level output indices, since it is not part of manufacturing.

Impact on Material and Fuels Input Indices

Output prices from Division 14 feed into the main input index and the input index excluding food, beverages, tobacco and petroleum industries. This month, Division 14 including the aggregates levy has been used as a component in these indices. The levy has provisionally added 0.14 index points to the main input index (from April) and 0.34 index points to the index excluding food, beverages, tobacco and petroleum industries.

Division 14 is a component in several of the detailed industry input indices on table 7 of the First Release. The indices most affected will be the manufacture of non-metallic minerals (RBBY), other mining and quarrying (RABE), construction materials (NOEO) and house building materials (NOEP). These indices now use Division 14 including the Levy as components.
