About the Office for National Statistics

The Office for National Statistics (ONS) is the government agency responsible for compiling, analysing and disseminating many of the United Kingdom's economic, social and demographic statistics, including the retail prices index, trade figures and labour market data, as well as the periodic census of the population and health statistics. The Director of ONS is also the National Statistician and the Registrar General for England and Wales, and the agency administers the statutory registration of births, marriages and deaths there.

A National Statistics publication

Official statistics bearing the National Statistics logo are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.

BACKGROUND TO PRODUCER PRICES

INTRODUCTION

This publication contains price information from UK manufacturers and importers. Output data is based on the revised Standard Industrial Classification SIC(92), the import data is based on the Standard International Trade Classification SITC (R3) and the export data on the Combined Nomenclature (CN).

WHAT ARE PRODUCER PRICES?

Producer Price Indices (PPIs) are a series of economic indicators that measure the price movement of goods bought and sold by UK manufacturers. It is a base weighted index working on the basket of goods concept. A wide range of representative products are selected and the prices of these goods collected each month. The movement in these prices are weighted to reflect the relative importance of the products in a chosen year (known as the base year) currently 1995. These are then aggregated for various sectors of industry to provide the published indices in the monitor.

The input PPIs (table 3) measure changes in the price of materials and fuel bought by manufacturers for processing. The output PPIs (table 4) indicate changes in the prices manufacturers charge for goods destined for the UK market as they leave the factory net of VAT and after discounts.

More information can be found on our website

<http://www.statistics.gov.uk/ppi>

NS DATABANK

The four letter identifiers listed against each of the index descriptions are part of the datasets available from the NS Databank and provide access to longer runs of data than appear in these tables. The NS Databank is a collection of mostly macro-economic time series available in computer readable format which can be loaded as spreadsheets and viewed using standard spreadsheet packages.

Details of the services offered and the schedule of charges are available from Marketing and Customer Services Department, Zone B1/06, 1 Drummond Gate, London SW1V 2QQ
Tel 020 7533 5675 or Fax 020 7533 5688.

The databank services can also be provided over the Internet, which can be accessed from the NS Web Site address which is <http://www.statistics.gov.uk>

INFORMATION

How to use this Publication

Need Some Help?

This publication gives you all the available information on price data. However, if you have any technical queries the following help line is available and staff will be happy to take your call:

☎ (01633) 812106

For general enquiries and tables 1 to 6.

Alternatively you can email us at **ppi@ons.gov.uk**

**Publication
Dates**

The dates on which this publication is available in 2001 are:

| | | | | | |
|----------|----|--------|----|-----------|----|
| January | 23 | May | 22 | September | 18 |
| February | 20 | June | 19 | October | 16 |
| March | 20 | July | 17 | November | 20 |
| April | 17 | August | 21 | December | 18 |

**What is
MM22?**

This publication is produced monthly and provides price movement data at all manufacturing, aggregated industry and product group level. It consists of data supplied from individual UK manufacturers, importers and exporters.

**What's
included?**

The Producer Price Indices are calculated from the price movements of around 9,000 closely defined materials and products purchased (including imports) and manufactured by UK industry. This price data is converted into a basic set of price indices from which broad series are built up. Products destined for sale in the UK are grouped in accordance with the Standard Industrial Classification 1992 with weighting patterns based on overall purchases and sales by manufacturers within those groupings. The indices published in this monitor are widely used by business in price escalation clauses in contracts and for monitoring price movements in the products they trade.

A number of export price indices classified to the European harmonised tariff code system is published in table 6. Coverage is being extended to include other areas of manufacturing exports.

**Special
Indices?**

NS can for a charge, make up a special index for you and provide regular monthly updates. For example you may wish to monitor the movement in price of a group of products from different sectors of this monitor or to use weighting patterns which more closely reflect your companies own trends of purchases or sales. In either case it is likely we can help.

If you would like more details of this service please call **(01633) 812106** or write to the following address **National Statistics, Publication Section, Room 1.162, Government Buildings, Cardiff Road, Newport, South Wales, NP10 8XG** or email us at **ppi@ons.gov.uk**

Statfax!

It is possible to obtain a copy of the latest PPI First Release printed from your own fax machine just minutes after it is issued by polling **0906 7360 221**. This contains all the important headline data from producer prices and is updated within minutes of the figures being published.

What is Navidata?

NS has now launched a software package that will represent PPI datasets in a tabulation and graphical format. This software is available for purchase as a floppy disc and allows users to create tailor made datasets for comparison. For details of availability and prices or to place an order **Tel 020 7533 5675** or **Fax 020 7533 5688**.

NOTES

Reading the data

These notes should help you interpret the information in the following tables.

General Information

The weighting patterns used to calculate index values are sourced from several areas of NS. The Gross Sector Output Series are based on sales values (excluding exports) obtained from the annual and quarterly PRODCOM inquiries. Weights for Input/Output Group Input Indices are based on data produced by I/O section. The Net Sector Output Series weights are based upon the results of the Purchases and Prodcom Inquiry and Input/Output tables.

What is SIC (92)?

The PPI uses four main levels of classification as defined by the European Standard Industrial Classification SIC(92). They are: class level - 4 digit numeric; division level - 2 digit numeric; sub section – 2 digit alpha; section - 1digit alpha.

In table 1 there are three published numerical constituents of the SIC (92). Series of the form 6292----- are higher level indices on a net sector basis. Series of the form 6192----- and 6112----- are lower level indices calculated on a gross sector basis. For table 2, there are four published numerical constituents. They are 72092----- for the higher level indices on a net sector basis, followed by 71092-----, 7111-----

and 7112----- on a gross sector basis. For table 3 (which is based on input/output groupings), the numerical constituents of the indices which are on a gross sector basis, begin with 6113 followed by a 2 digit group number.

The numerical constituents of the indices found in table 4 such as 1411000000 are broken down as follows: 14- the division (othermining and quarrying), 141- the group (quarrying of stone), 1411- the class (quarrying of stone for construction) and 141100---- the specific manufactured product. In addition, certain series are available below the 4 digit level.

**What are
Net Sector
Output
Indices?**

The weighting patterns used to calculate net sector output indices exclude transactions between companies classified to the same sector e.g. manufacturing sector or manufacturing excluding food, drink, tobacco and petroleum. For example, for Net Sector Output purposes, the value of an electronic component manufacturer's sales to a car manufacturer would be excluded from the weighting patterns used to derive final index values (thereby reflecting the value of sales to only those purchasers outside the manufacturing sector).

**What are
Input/Output
Group Input
Indices?**

This series represents the price movement of materials and fuels purchased by UK manufacturers and is found in table 3. The I/O group input series all include purchases of materials and fuel including those between manufacturers classified to the same sector of industry (eg one chemical manufacturer to another).

**What are
GrossSector
Output
Indices?**

This series is found in table 4 and represents the price movement of goods sold within the UK by companies classified to manufacturing as defined by SIC(92). Weights are calculated on a gross basis i.e. all transactions are included in deriving the weighting patterns, including sales within the same industry.

**How are
Export Prices
calculated?**

The Export Price Indices (EPIs) use broadly the same methodology as the PPI. A range of representative products are selected and the prices of these goods collected each month from established exporters within specified 6 digit tariff codes of the Harmonised System (HS). The movement in these prices are weighted to reflect the relative importance of these products and aggregated to 3 digit (CN) level to provide the published indices in table 6. The series are calculated on a base year of 1995=100.

What is the Combined Nomenclature?

Trade headings, or the Combined Nomenclature (CN codes) as they are more widely recognised, are the eight digit European Community classification system of goods for overseas trade statistics. The numbering system used, corresponds to the codes in the Harmonised System (HS) which are used for international trade.

What about VAT and Excise Duties?

All indices are compiled exclusive of Value Added Tax. Excise duties (on cigarettes, tobacco, alcoholic liquor and hydrocarbon oils) are included except where specified otherwise.

What about Provisional Data?

Indices for the latest two months are always provisional and flagged with a 'p' marker due to the level of imputation present for items where the latest prices are not available. This level of imputation, reduces significantly for earlier months allowing index data to be published as firm values.

What about Revisions?

Occasionally, information is received that produces a change in an index value that has already been published as firm. Where the change is significant, index values are recalculated and annotated with an 'r' marker.

What about Price Changes?

The monthly index data relates to an average calculation for the month. The effect of price changes occurring part way through the period will only be reflected in an index in the following month's publication.

No Data?

You will see that various symbols are used throughout this publication to provide meaning to the gaps in the data or where the quality of the index values is reduced. There are a number of these and the following key will provide an explanation:

B These index values are considered less reliable mainly due to the lack of market coverage.

F Indices labelled F in Table 4 are based on relatively few quotes and in the long term should not be relied upon for contractual purposes.

" These values have been suppressed because the index would risk disclosure of individual price movements. Due to the introduction of the PPI New Estimator some previously published August 2001 index numbers are no longer available. The new estimator was introduced with effect from July 2001 (see background note on New Estimator). In some cases indices which were publishable under the old estimator are now not publishable under the new estimator. As a result in a few cases August data appeared last month, but is not published this month. August values published last month are however still valid.

n.e.c. Not elsewhere classified.

MM22 MONITOR LAYOUT

How do I use the data?

The example below of the MM22 layout, shows what the data within the tables will tell you:

The Specific Table Heading

The Base Year of the Index (see introductory notes)

The Specific Product Index Number SIC(92)-PPI/SSPI SITC(R3)-IPI CN-EPI

The Monthly Index Value (shows price level compared with 1995 base year)

The Index Description

The SIC(92) or SITC(R3) Division Number

Suppressed values

The ONS Database Identifier

The Average Index Value for the Year

| | | 1996 | | | | Annual Average | | | |

Producer prices

September 2001

The output price index for home sales of manufactured products fell by 0.2 per cent in the twelve months to September, compared with a rise of 0.2 per cent in the twelve months to August.

The output price index excluding excise duties (PPIY) rose by 0.4 per cent in the year to September and seasonally adjusted rose by 0.1 per cent between August and September.

The output price index excluding food, beverages, tobacco and petroleum remained unchanged in the year to September. In the seasonally adjusted index the latest three months over the previous three months remained unchanged.

This month marks the introduction of an improved method of estimation for output prices, the final stage of a wide ranging programme of quality improvements (see separate note).

Input prices (materials and fuel) manufacturing industry

The input price index for materials and fuel purchased by manufacturing industry fell by 0.3 per cent between August and September. This reflected a fall in the prices of home produced food, imported metals and “other imported materials”. The Climate Change Levy cannot yet be included in the input PPI (an estimate is however given in the Background Notes). Prices of imported materials as a whole (including oil) fell by 0.8 per cent between August and September.

Background Note

Introduction of a New Estimator for the PPI

A new method of estimation has been introduced for the September results. This is the final stage of a project to improve the underlying methodology of the PPI. The project represents the biggest set of methodological improvements to the series for over 40 years.

Developments have been introduced in a range of areas for output prices, in particular improving the sample design and the method of estimation. This has been a large-scale project carried out over several years - the scale of the project has meant that developments have had to be staged. There has been careful consultation with users and the statistical community.

New sample

The new sample was introduced in 4 phases between April 1999 and July 2000. Under this new design the quotes selected for the sample have been redistributed across industries in a way that produces the highest quality results whilst maintaining the same sample size. The number of smaller companies included in the sample has increased.

The number of price quotes selected from various industries has been changed to reflect changes in the relative importance of industries over time, for example, the growth of the computer industry and the decline of shipbuilding.

Sample rotation

Having reallocated the sample, it is important to ensure that it remains up-to-date, for example, new products are included in the sample as they come onto the market. The burden on small companies also needs to be shared. Hence the sample is now updated (rotated) on an annual basis – about a third of the sample is replaced each year.

New estimator

Important changes have also been made to the method of estimation. The procedure by which price quotes from individual businesses are weighted to form the index has been changed to eliminate risk of bias. Under this design more (correct) weight is given to smaller businesses to reflect their selection from many other similar companies not included in the sample.

The effect of this change has been a shift in the distribution of lowest level (item) weights with less extreme (small or large) weights applied to individual items. In other words a more even distribution of weights across the sample.

Quality assurance

Each of the changes was thoroughly tested and quality assured before being introduced. Results were compared to those produced under the old design and methodology.

For the new estimator this comparison continued for a 12-month period to enable a full understanding of the implications of the change. Analysis showed small differences in the aggregate series (in nearly all cases much less than 0.1 index points). More substantial differences were displayed by some of the more detailed level series, as expected. Each of these differences was carefully investigated and the new methods were found to produce satisfactory results.

What this means in practice

PPI users will see little immediate difference in results as a consequence of the changes. This is because no revisions to historical data have been made - new methods have been linked on at an appropriate point in time (for example, the new estimator has been linked in July 2001). The underlying design and methodology has however been greatly improved and will provide a better quality output PPI.

Input prices are unaffected, except detailed indices on a "gross basis" (as in Table 6) which make use of output prices in their construction.

Summary

This has been a large-scale programme of work, taking several years to fully implement. It is thought that the UK PPI methodology is now amongst the best in the world.

Further Information

A more detailed article on the developments was published in the August edition of Economic Trends available at http://www.statistics.gov.uk/themes/economy/Articles/General/Extracts/downloads/New_estimator_for_PPI.pdf

Climate Change Levy

1. The Climate Change Levy (CCL) was introduced from April 2001. The levy, which is designed to promote energy efficiency by industrial and commercial users, applies to gas, coal (and other solid fuels) and electricity supplied to business and as such impacts on Producer Price Index input indices, (materials and fuels).
2. In principle, the levy should therefore be included in the input costs to industry. However, there is some uncertainty regarding how the CCL is impacting in practice statistically. There is a transition phase whilst energy providers get used to the administration of the new tax and provide the necessary information to Customs & Excise. The system also involves a wide range of discounts which are negotiated by individual groups of users. As a result, the arrangements that have been made between DTI Energy Statistics (who provide input price indices to ONS for energy) and energy providers will take time to settle in. Therefore, ONS is not able to introduce an extra CCL-inclusive series for the input PPI to begin with and CCL is excluded from all the tables in this publication. Once the new tax/statistical system has bedded in (hopefully after a few months), ONS aims to introduce a new series.
3. DTI Energy Statistics has however provided an estimate of the effect of the Climate Change Levy. This very preliminary estimate (which should be treated with caution) implies that the levy might add 0.8 per cent to the input (materials and fuels) index in September 2001.
4. It should be noted that there will be a particular statistical difficulty regarding detailed input indices, industry by industry, shown in tables 1 and 3. Each industry can in practice pay its own rate for the various forms of energy, depending on the various negotiated discounts (and exemptions) that apply. DTI and ONS will be unable to disaggregate CCL-inclusive input indices below manufacturing, although in the medium term it is hoped to study the feasibility of collecting such breakdowns by industry once the new statistical arrangements have settled in.
