A National Statistics publication

National Statistics are produced to high professional standards set out in the Code of Practice for Official Statistics. They are produced free from political influence.

About us

The Office for National Statistics

The Office for National Statistics (ONS) is the executive office of the UK Statistics Authority, a non-ministerial department which reports directly to Parliament. ONS is the UK government's single largest statistical producer. It compiles information about the UK's society and economy which provides evidence for policy and decision-making and in the allocation of resources.

The Director of ONS is also the National Statistician.

BACKGROUND TO PRODUCER PRICES

INTRODUCTION

This publication contains price information from UK manufacturers and importers. Output data is based on the revised Standard Industrial Classification SIC(92), the import data is based on the Standard International Trade Classification SITC (R3) and the export data on the Combined Nomenclature (CN).

WHAT ARE PRODUCER PRICES?

Producer Price Indices (PPIs) are a series of economic indicators that measure the price movement of goods bought and sold by UK manufacturers. It is a base weighted index working on the basket of goods concept. A wide range of representative products are selected and the prices of these goods collected each month. The movement in these prices are weighted to reflect the relative importance of the products in a chosen year (known as the base year) currently 2005. These are then aggregated for various sectors of industry to provide the published indices in the monitor.

The input PPIs (table 3) measure changes in the price of materials and fuel bought by manufacturers for processing. The output PPIs (table 4) indicate changes in the prices manufacturers charge for goods destined for the UK market as they leave the factory net of VAT and after discounts.

National Statistics Online:

www.statistics.gov.uk

Users can download time series, cross sectional data and metadata from across the Government Statistical Service (GSS) using the search and index functions from the homepage. Many datasets can be downloaded, in whole or in part, and directory information for all GSS statistical resources can be consulted, including censuses, surveys, periodicals and enquiry services. Information is posted as PDF electronic documents or in XLS and CSV formats, compatible with most spreadsheet packages.

Time Series Data

The Time Series data facility on the website provides access to around 40,000 time series, of primarily macro-economic data, drawn from the main tables in a range of our major economic and market publications. Users can download complete releases, or view and download customised selections of individual time series.

What is MM22?

This publication is produced monthly and provides price movement data at all manufacturing, aggregated industry and product group level. It consists of data supplied from individual UK manufacturers, importers and exporters.

What's Included?

The Producer Price Indices are calculated from the price movements of around 6,750 closely defined materials and products purchased (including imports) and manufactured by UK industry. This price data is converted into a basic set of price indices from which broad series are built up. Products destined for sale in the UK are grouped in accordance with the Standard Industrial Classification 1992 with weighting patterns based on overall purchases and sales by manufacturers within those groupings. The indices published in this monitor are widely used by business in price escalation clauses in contracts and for monitoring price movements in the products they trade.

A number of export price indices classified to the European harmonised tariff code system is published in table 6. Coverage is being extended to include other areas of manufacturing exports.

Special Indices

ONS may for a charge, make up a special index for you and provide regular monthly updates. Each case is considered against the resources required to produce and maintain the series requested.

If you would like more details of this service please call **(01633) 455941** or write to the following address **National Statistics, Publication Section, Room 1.227, Government Buildings, Cardiff Road, Newport, South Wales, NP10 8XG** or email us at ppi@ons.gov.uk

Data Formats

Data can be downloaded in either plain text file or Navidata[®] 3.1 formats. Navidata[®] 3.1 is free software developed specifically for analysing and using economic time series data - it enables you to create tables and charts, and export in CSV (comma or tab separated) formats which are compatible with your PC's spreadsheet software

NOTES

Reading the data

These notes should help you interpret the information in the following tables.

What are Net Sector Output Indices?

The weighting patterns used to calculate net sector output indices exclude transactions between companies classified to the same sector e.g. manufacturing sector or manufacturing excluding food, drink, tobacco and petroleum. For example, for Net Sector Output purposes, the value of an electronic component manufacturer's sales to a car manufacturer would be excluded from the weighting patterns used to derive final index values (thereby reflecting the value of sales to only those purchasers outside the manufacturing sector).

What are Gross Sector Output Indices?

This series is found in tables 2 and 4 represents the price movement of goods sold within the UK by companies classified to manufacturing as defined by SIC(92). Weights are calculated on a gross basis i.e. all transactions are included in deriving the weighting patterns, including sales within the same industry.

What are Input/Output Group Input Indices?

This series represents the price movement of materials and fuels purchased by UK manufacturers and is found in table 3. The I/O group input series all include purchases of materials and fuel including those between manufacturers classified to the same sector of industry (e.g. one chemical manufacturer to another).

How are Export Prices calculated?

The Export Price Indices (EPIs) use broadly the same methodology as the PPI. A range of representative products are selected and the prices of these goods collected each month from established exporters within specified 6 digit tariff codes of the Harmonised System (HS). The movement in these prices are weighted to reflect the relative importance of these products and aggregated to 3 digit (CN) level to provide the published indices in table 6. The series are calculated on a base year of 2005=100.

What about VAT and Excise Duties?

All indices are compiled exclusive of Value Added Tax. Excise duties (on cigarettes, tobacco, alcoholic liquor and hydrocarbon oils) are included except where specified otherwise.

What about Provisional Data?

Indices for the latest two months are provisional and flagged with a 'p' marker due to the level of imputation present for items where the latest prices are not available. The latest five months are subject to revisions in light of (a) late and revised contributor data and (b) revisions to seasonal adjustment factors which are re-estimated every month.

What about Revisions?

Occasionally, information is received that produces a change in an index value that has already been published as firm. Where the change is significant, index values are recalculated and annotated with an 'r' marker. More information on the cause of the revisions is presented in the First Release.

What about Price Changes?

The monthly index data relates to an average calculation for the month. The effect of price changes occurring part way through the period will only be reflected in an index in the following month's publication.

No Data?

You will see that various symbols are used throughout this publication to provide meaning to the gaps in the data or where the quality of the index values is reduced. There are a number of these and the following key will provide an explanation:

B These index values are considered less reliable mainly due to the lack of market coverage.

F Indices labelled F are based on relatively few quotes and in the long term should not be relied upon for contractual purposes.

" These values have been suppressed because the index would risk disclosure of individual price movements.

n.e.c. Not elsewhere classified.

Rebased MM22

Indices in this release have been rebased and referenced onto 2005=100. This process takes place every five years. A long run of back data on 2005=100 is available on the National Statistics website under related links at <http://www.statistics.gov.uk/ppi>

PPI: Cut in sample size

The sample size of the PPI survey has been reduced by 25 per cent by reallocating the sample to maintain the quality of the high level PPI shown in the First Release (i.e. at 2 digit SIC level and above). This involves recruitment in certain areas offset by cuts in other areas. Below 2 digit level, there has been inevitable loss of quality for certain industries' PPIs and a loss of detail in the published data, although the intention is to continue publishing all the 4 digit SIC level PPIs. The cut was implemented in three stages, in March 2007, July 2007 and December 2007. Details are shown on the ONS website: http://www.statistics.gov.uk/downloads/theme_economy/PPICutInSampleSizeDecember2007.pdf

Linking Rebased indices

The Producer Prices are series of base-weighted indices resting on the 'basket of goods' concept, and regular five yearly rebasing is carried out in order to reflect the changing pattern of industry's sales and purchases in the index weights. This rebasing has switched to an index with a base of 2005=100 from its former base of 2000=100. This means that the fixed weights used to combine product indices into broader aggregates will reflect the pattern of transactions in 2005 rather than 2000.

To convert 2005=100 indices back onto a 2000=100 basis

For those who are using the 2000=100 indices in long-term contracts and wish to extend the series beyond August 2008 (the latest month for which 2000=100 figures were published), the following approach may be suitable.

First, select the nearest equivalent index published in the 2005=100 series and then calculate a linking factor as follows:

$$\frac{\text{2000=100 index for June 2008}}{\text{Nearest equivalent 2005=100 index for June 2008}}$$

Then simply multiply the 2005=100 index after June 2008 by this linking factor to extend the 2000=100 time series.

For example: 7209200000 (PLLU)

	June	July	August
2000=100 ²	123.8	124.4p	123.7p
2005=100	114.9	115.4	114.6p

²As published in Business Monitor MM22 for August 2008.

The factor is calculated as $123.8/114.9 = 1.077$ and figures for the 2000=100 extended series are calculated as follows:

July	$115.4 * 1.077 = 124.3$
August	$114.6 * 1.077 = 123.4$

Producer prices

June 2009

Date: 10 July 2009

Coverage: United Kingdom **Theme:** The Economy

The output price index for home sales of manufactured products fell 1.2 per cent in the year to June, compared with a fall of 0.3 per cent in the year to May. The index fell 0.2 per cent between May and June, mainly reflecting falls in chemical prices and other manufactured products, partly offset by increases in petrol product prices.

The output price index excluding excise duties fell 2.0 per cent in the year to June. The index fell 0.3 per cent between May and June.

The output price index excluding food, beverages, tobacco and petroleum rose 0.1 per cent in the year to June. The index fell 0.8 per cent between May and June.

Input prices: summary

The input price index for materials and fuels purchased by manufacturing industry fell 11.0 per cent in the year to June but rose 1.5 per cent between May and June.

The rise in the input index between May and June mainly reflected a rise in the price of crude oil.

Prices of imported materials as a whole (including Imported crude oil) fell 0.3 per cent between May and June.

The input price index for manufacturing industry excluding the food, beverages, tobacco and petroleum industries fell 2.6 per cent in the year to June. Seasonally adjusted, the index fell 0.3 per cent between May and June.

Revisions (Tables 8R and 9R)

For this release Tables 8R and 9R highlight revisions to movements in price indices previously published in last month's First Release. These are mainly caused by changes to the most recent estimates as more price quotes are received and also revisions to seasonal adjustment factors, which are re-estimated every month.

The headline input price index for May 2009 has been revised upwards. This revision was mainly caused by more up to date data for crude oil and gas being received.

Background Notes

BASIC QUALITY INFORMATION

Link to Summary Quality Report

1. A Summary Quality Report for the PPI can be found at:
www.statistics.gov.uk/about/data/methodology/quality/information_businessstatistics.asp.
This report describes, in detail, the intended uses of the statistics presented in this publication, their general quality and the methods used to produce them.

Relevance to users

2. Index numbers shown in the main text of this First Release are on a net sector basis. The index for any sector relates only to transactions between that sector and other sectors: sales and purchases within sectors are excluded. However, the more detailed figures shown in Tables 4 and 6 are on a gross basis; that is, intra Industry sales and purchases are included in each of these indices.
3. Indices relate to average prices for a month. The full effect of a price change occurring partway through any month will only be reflected in the following month's index.
4. All index numbers exclude VAT. Excise duties (on cigarettes, manufactured tobacco, alcoholic liquor and petroleum products) are included, except where labelled otherwise. Since PPIs exclude VAT, they are not affected by the reduction in the standard rate of VAT to 15 per cent from 1 December. However, offsetting increases in excise duties on petroleum, alcohol and tobacco are included in the relevant PPI output indices from December (with the exception of the excluding duty series).
5. Following a regular review, it has been determined that the output price indices and the main input index for materials and fuel (all manufacturing) no longer display a significant seasonal pattern; therefore these series will no longer be published in seasonally adjusted form. The series for material and fuel (excluding food beverages, tobacco and petroleum) will continue to be seasonally adjusted.
6. The detailed input indices of prices of materials and fuels purchased by industry (table 6) do not include the Climate Change Levy. This is because each industry can in practice pay its own rate for the various forms of energy, depending on the various negotiated discounts (and exemptions) that apply.

Common pitfalls in interpreting series

7. Expectations of accuracy and reliability in sample surveys are often too high. Revisions and sampling variability are inevitable consequences of the trade between timeliness, accuracy and the burden on respondents. Details of sampling variability are included elsewhere in this release.
8. Very few statistical revisions arise as a result of 'errors' in the popular sense of the word. All estimates, by definition, are subject to statistical 'error' but, in this context, the word refers to the uncertainty in any process or calculation that uses sampling, estimation or modelling. Most revisions reflect either the adoption of new statistical techniques or the incorporation of new information which allows the statistical error of previous estimates to be reduced. Only rarely are there avoidable 'errors' such as human or system failures, and such mistakes are made quite clear when they are discovered and corrected.

Accuracy

9. Figures for the latest two months are provisional and the latest five months are subject to revisions in light of (a) late and revised respondent data and (b), for the seasonally adjusted series, revisions to seasonal adjustment factors which are re-estimated every month. A routine seasonal adjustment review is conducted in the autumn annually. There are no other planned methodological changes in the next 12 months.

Revisions

10. Revisions to data provide one indication of the reliability of key indicators. The tables below show summary information on the size and direction of the revisions which have been made to the data covering a five year period. A statistical test has been applied to the average revision to find out if it is statistically significantly different from zero. An asterisk (*) shows that the test is significant.
11. The table overleaf presents a summary of the differences between the first estimates published between June 2003 and May 2008 and the estimates published 12 months later. These numbers include the effect of rebasing onto 2005=100 in October 2008. For more information see: http://www.statistics.gov.uk/articles/economic_trends/ETAugMorris.pdf

PUBLICATION POLICY

13. The complete run of data in the tables of this First Release are also available to view and download in other electronic formats free of charge using the National Statistics Time Series Data website service. Users can download the complete release in a choice of zipped formats, or view and download their own selections of individual series. The Time Series Data service can be accessed at: <http://www.statistics.gov.uk/timeseries>
14. Details of the policy governing the release of new data are available from the press office. Also available is a list of the names of those given pre-publication access to the contents of this release. In the light of the timing of the MPC meeting, the PPI was provided to the Bank of England at 8am on Thursday in line with release protocols.
