About the Office for National Statistics

The Office for National Statistics (ONS) is the executive
office of the UK Statistics Authority, a
non-ministerial department which reports directly to
Parliament. ONS is the UK Government's single
largest statistical producer. It functions as:

- the office of the National Statistician, who is
also the UK Statistics Authority's Chief Executive and
principal statistical adviser
- the UK's National Statistics Institute (or NSI - to use
European terminology), and
- the 'Head Office' of the Government Statistical
Service (GSS)

A National Statistics publication

National Statistics are produced to high professional
standards set out in the Code of Practice for Official
Statistics. They undergo regular quality assurance
reviews to ensure that they meet customer needs.
They are produced free from any political interference.

Introduction

The Monthly Review of External Trade Statistics is intended to supplement the information contained in the monthly National Statistics Statistical Bulletin on UK trade. This September 2010 issue of the Monthly Review is consistent with the figures shown in the Statistical Bulletin of 9 November 2010.

Free access to National Statistics data is available online via the UK National Statistics Publication Hub:

www.statistics.gov.uk

Time Series Data

Access to around 40,000 time series, of primarily macro-economic data, drawn from the main tables in a range of our major economic and labour market publications. Download complete releases, or view and download your own customised selection of individual time series.

StatBase®

Web-based access to time series, cross sectional data and metadata from ONS, organised by theme and subject. Download many datasets, in whole or in part, or consult directory information for all GSS statistical resources, including censuses, surveys, periodicals and enquiry services. Information is posted as PDF electronic documents, or in XLS and CSV formats, compatible with most spreadsheet packages.

Complete copies of this publication are available to download free of charge on the following web page:

<http://www.statistics.gov.uk/statbase/Product.asp?vlnk=613>

Longer historical runs of the data in this publication can be downloaded free of charge from the ONS website (<http://www.ons.gov.uk>). Time Series Data (<http://www.statistics.gov.uk/statbase/ts-data.asp>) allow individual time series to be viewed and downloaded - more details can be found online.

Electronic versions of these data are also available from National Statistics, Publishing on 01329 444366 or email website.editorial@statistics.gov.uk.

Trade by Industry

Similar arrangements apply to editions of UK Trade in Goods Analysed in Terms of Industries (Business Monitor MQ10), which shows quarterly trade data analysed according to the Standard Industrial Classification (SIC(03)).

Review of External Trade Statistics

September 2010

Revisions

The data in this release are subject to revisions following the ONS National Accounts Revision Policy. This can be found at:<http://www.statistics.gov.uk/CCI/article.asp?ID=1187>

The revisions to trade in goods from August 2010 reflect revised data from Her Majesty's Revenue and Customs and other data suppliers, revised estimates of trading associated with VAT MTIC fraud, later survey data on trade prices and a re-assessment of seasonal factors.

Notes

1. The statistics of trade in goods compiled by the Office for National Statistics (ONS) are derived principally from data provided by Her Majesty's Revenue and Customs (HMRC).

Overseas Trade Statistics compiled by HMRC

2. Since 1993 statistics of the United Kingdom's overseas trade in goods comprise:

- statistics of UK imports from and exports to countries outside the EU which have been compiled from declarations made to HM Revenue & Customs;
- statistics of UK arrivals (imports) from and dispatches (exports) to other Member States of the EU compiled from Intrastat returns sent to HMRC.

The Intrastat system is linked to Value Added Tax (VAT) and has applied since 1993 in all EU member states. Prior to 1993, statistics of UK trade with *all* countries were compiled from declarations made to HM Revenue & Customs.

3. For statistical purposes, the UK adopts the valuation bases recommended in the *International Merchandise Trade Statistics Concepts & Definitions* published by the United Nations. This means the valuation of exports (dispatches) is on a *free on board* (fob) basis, that is the cost of goods to the purchaser abroad, and the valuation of imports (arrivals) is on a *cost, insurance and freight* (cif) basis. This includes all expenses incurred moving the goods to the point of entry into the UK (but excludes any duty or tax chargeable in the UK).

Balance of Payments Statistics compiled by ONS

4. In order to conform to the International Monetary Fund (IMF) Balance of Payments (BoP) definition, the value of imports required is the value of goods at the point of export (that is, the Customs border of the exporting country) rather than the value of goods as they arrive in the UK. The freight and insurance costs of transporting the goods to the UK needs to be deducted from the values recorded by HMRC.

5. In addition, ONS has to make various other adjustments to include transactions which are not reported to HMRC and to exclude transactions reported to HMRC but where there is no change of ownership. Table 2.4 in the annual National Statistics publication *United Kingdom Balance of Payments* summarises the transition from trade in goods statistics on an Overseas Trade Statistics (OTS) basis (compiled by HMRC) to a BoP basis (compiled by ONS) for each of the last 11 years.

6. Import figures for trade in goods include adjustments to allow for the impact of VAT MTIC fraud. Changes to the pattern of trading associated with MTIC fraud can make it difficult to analyse trade by commodity group and by country as changes in the impact of activity associated with this fraud affect both imports and exports. Originally, most carousel chains only involved EU member states. From 2004 in particular, some carousel chains have included non-EU countries, for example, Dubai and Switzerland. However, the MTIC trade adjustments are added to the EU import estimates derived from Intrastat returns as it is this part of the trading chain that is not generally recorded. In particular, adjustments affect trade in capital goods and intermediate goods - these categories include mobile phones and computer components.

Classifications and definitions

7. The Overseas Trade Statistics (OTS), on which the trade data are based, are compiled under the United Nations Standard International Trade Classification Revision 4 (SITC R4), but the data has been converted back to SITC R3, in order to help users to compare data over time. One exception to the use of SITC R3 is defence equipment, which in the UK is included in Section 9 rather than Section 8. In addition, ONS uses an alternative presentation within finished manufactures to classify such goods into passenger motor cars, other consumer goods and capital goods. This presentation is

derived from the *Classification by Broad Economic Categories defined in terms of SITC, Revision 3* published in 1986 by the United Nations. There are some discontinuities at detailed levels, particularly between capital and intermediate goods where some products are allocated from January 2007 to intermediate goods rather than capital goods. It is also possible that volume and price changes between 2006 and 2007 may be less reliable than usual.

8. Trade in gold is reported to HMRC but is excluded from the statistics of total exports and imports published in the Overseas Trade Statistics. However, trade in ores and concentrates and finished manufactures of gold (eg jewellery) are included in total exports and imports.

9. In this publication, 'oil' means petroleum and petroleum products (SITC Division 33). The tonnages of crude oil exported and imported cannot be directly compared with those originating from the Department of Energy and Climate Change, which are compiled from data provided direct from oil companies and published in *Monthly Digest of Statistics* and *Energy Trends*. The average value per tonne may reflect not only changes in price but also changes in the commodity mix and this is particularly true for imports.

10. In the context of the short-term statistics, trade in ships (including drilling or production platforms), aircraft, precious stones and silver can be regarded as erratic because of the large value of individual shipments. Precious stones are classified to SITC Division 66, silver to Division 68 and the other erratic items to Division 79.

11. Two more countries joined the EU from 1 January 2007. These countries are Bulgaria and Romania. In order to enable users to make long-run comparisons, data for the new definition EU and non-EU was produced from January 1998 onwards for value, and from January 1999 onwards for volume and price indices. At the same time data for the old definitions is no longer being maintained. There are additional series for country groupings on the old definitions. The coverage of EMU countries was extended to include Slovenia.

From January 2008, the coverage of EMU countries was extended to cover Cyprus and Malta, and from January 2009 the coverage of EMU countries has been extended to cover Slovakia.

Data collected in the Overseas Trade Statistics have been combined for the United States and Puerto Rico, and for Dubai, Abu Dhabi and Sharjah (the United Arab Emirates) from January 2009 onwards. Combined estimates have been included in this publication but estimates are still available for the United States and Dubai separately up till end of 2008 on request.

Some EU and non EU breakdowns of commodity data for Chained Volume Measures which are available from the Statbase service may be less reliable than the current price data. Please consult Marilyn Thomas on 01633 455708 if you are considering using them.

Seasonal Adjustment

12. The monthly trade in goods figures published by ONS are on a seasonally adjusted basis. Series for the value of trade in goods and the volume indices are seasonally adjusted independently. Research suggests little evidence of seasonality in the price indices. The seasonally adjusted series for total trade in goods are derived by summing or weighting together major commodity components. Full seasonal adjustment runs are carried out each month using the latest data to estimate the seasonal factors for the current month and re-estimate those for the immediately-preceding month. It follows that there will be some revision to the previous month's estimates when the current month's are published. In common with other parts of ONS, the seasonal adjustment package used is X12ARIMA developed and maintained by the US Census Bureau.

13. HM Revenue & Customs New Export System (NES), which replaced manual (paper) Customs declarations with electronic submissions from the beginning of 2003, requires electronic messages from the trade once the goods have been exported in order to provide the departure date. In the absence of those messages being input initially, some non-EU exports had been allocated to the incorrect month. This was addressed by HMRC implementing a change to the processing rules. Because of these problems, ONS made adjustments to the trade statistics to better reflect the flow of exports to non-EU countries during the period January-September 2003.

Price and volume indices

14. The indicators of price movement ('deflators') for individual commodities used in the calculation of price and volume indices are based where possible on export price indices (EPIs) and import price indices (IPIs) directly collected by ONS from UK manufacturers. For certain commodities which are traded on World markets, price information on these markets is used for both imports and exports.

Revisions

15. Most revisions to the trade in goods figures are small in relation to the variability of the series. The monthly estimates for trade in goods with non-EU countries are revised when the following month's figures are first published, to reflect adjustments to the OTS data and revisions to the previous month's seasonal factors. Because of the Intrastat system, there is a need to revise the EU estimates over a longer period of time. However, it is the policy of ONS to minimise the frequency with which revisions are published as far as is sensible.

Rounding

16. Figures on a Balance of Payments basis are adjusted to ensure arithmetical consistency, in line with conventions used in the National Accounts. Index numbers are rounded to the nearest whole number or (for the highest-level aggregates) to one place of decimals.

Presentation

17. With the exception of the international comparisons shown in table G4, all trade in goods information in this publication is consistent with the Balance of Payments, although the conversion of the data from an OTS basis is less certain at the lower levels of aggregation. Tables containing this more detailed information have been annotated 'BoP-consistent basis', whereas the tables showing the more soundly based data have been annotated 'BoP basis'.

17. Detailed OTS figures appear in various publications issued by the Stationery Office on behalf of HM Revenue & Customs. These publications provide detailed commodity level data as well as breakdowns by country and area. Information on trade in goods with both EU and non-EU countries can also be obtained at <http://www.uktradeinfo.com>.

Further information

18. A paper entitled *Statistics on Trade in Goods* (GSS Methodological Series No. 36) gives comprehensive explanations of the bases on which trade in goods statistics are compiled, available on the National Statistics website at <http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=14943>.
