National Statistics are produced to high professional standards set out in the Code of Practice for Official Statistics. They are produced free from political influence.

About us

The Office for National Statistics

The Office for National Statistics (ONS) is the executive office of the UK Statistics Authority, a non-ministerial department which reports directly to Parliament. ONS is the UK government's single largest statistical producer. It compiles information about the UK's society and economy, and provides the evidence-base for policy and decision-making, the allocation of resources, and public accountability. The Director-General of ONS reports directly to the National Statistician who is the Authority's Chief Executive and the Head of the Government Statistical Service.

The Government Statistical Service

The Government Statistical Service (GSS) is a network of professional statisticians and their staff operating both within the Office for National Statistics and across more than 30 other government departments and agencies.

Exports fell by £0.1 billion (1.0 per cent) to £13.6 billion, and imports fell by less than £0.1 billion (0.3 per cent) to £9.5 billion.

Revisions

The data in this Statistical Bulletin are subject to revisions following the ONS National Accounts Revision Policy. This can be found at: <http://www.statistics.gov.uk/CCI/article.asp?ID=1187>

The revisions to trade in goods from January 2010 reflect revised data from Her Majesty's Revenue and Customs and other data suppliers, revised estimates of trading associated with VAT MTIC fraud, later survey data on trade prices and a re-assessment of seasonal factors.

Revisions to trade in services data, from January 2010 onwards, bring the monthly data into line with the UK Output, Income and Expenditure Statistical Bulletin published on 25 February 2011.

1 The adjustments are for the missing declarations (non response) and do not reflect the overall level of MTIC-related trade

2 From April 2010, data are presented in £ million to bring this table in line with others in this Statistical Bulletin. Previously, data were presented in £ billion.

[†]Earliest date for revisions to trade in goods is January 2010.

Notes

1. The statistics of trade in goods compiled by the Office for National Statistics (ONS) are derived principally from data provided by Her Majesty's Revenue and Customs (HMRC).

Overseas Trade Statistics compiled by HMRC

2. Since 1993 statistics of the UK's overseas trade in goods comprise:
 - statistics of UK imports from and exports to countries outside the EU which have been compiled from declarations made to HM Revenue & Customs (HMRC)
 - statistics of UK arrivals (imports) from and dispatches (exports) to other member states of the EU compiled from Intrastat returns sent to HMRC.
3. The Intrastat system is linked to Value Added Tax (VAT) and has applied since 1993 in all EU member states. Prior to 1993, statistics of UK trade with *all* countries were compiled from declarations made to HMRC.
4. For statistical purposes, the UK adopts the valuation bases recommended in the *International Merchandise Trade Statistics Concepts & Definitions* published by the United Nations. This means the valuation of exports (dispatches) is on a *free on board* (fob) basis, that is the cost of goods to the purchaser abroad, and the valuation of imports (arrivals) is on a *cost, insurance and freight* (cif) basis. This includes all expenses incurred moving the goods to the point of entry into the UK (but excludes any duty or tax chargeable in the UK).

Balance of Payments Statistics compiled by ONS

5. In order to conform to the International Monetary Fund (IMF) Balance of Payments (BoP) definition, the value of imports required is the value of goods at the point of export (that is, the Customs border of the exporting country) rather than the value of goods as they arrive in the UK. The freight and insurance costs of transporting the goods to the UK needs to be deducted from the values recorded by HMRC.
6. In addition, ONS has to make various other adjustments to include transactions which are not reported to HMRC and to exclude transactions reported to HMRC but where there is no change of ownership. Table 2.4 in the annual National Statistics publication *United Kingdom Balance of Payments* summarises the transition from trade in goods statistics on an Overseas Trade Statistics (OTS) basis (compiled by HMRC) to a BoP basis (compiled by ONS) for each of the last 11 years.
7. Import figures for trade in goods include adjustments to allow for the impact of VAT Missing Trader Intra-Community (MTIC) fraud. Changes to the pattern of trading associated with MTIC fraud can make it difficult to analyse trade by commodity group and by country as changes in the impact of activity associated with this fraud affect both imports and exports. Originally, most carousel chains only involved EU member states. From 2004 in particular, some carousel chains have included non-EU countries, for example, Dubai and Switzerland. However, the

MTIC trade adjustments are added to the EU import estimates derived from Intrastat returns as it is this part of the trading chain that is not generally recorded. In particular, adjustments affect trade in capital goods and intermediate goods – these categories include mobile phones and computer components.

Classifications and definitions

8. The Overseas Trade Statistics (OTS), on which the trade data are based, are compiled under the *United Nations Standard International Trade Classification Revision 4* (SITC R4), but the data has been converted back to SITC R3, in order to help users to compare data over time. One exception to the use of SITC R3 is defence equipment, which in the UK is included in Section 9 rather than Section 8. In addition, ONS uses an alternative presentation within finished manufactures to classify such goods into passenger motor cars, other consumer goods and capital goods. This presentation is derived from the *Classification by Broad Economic Categories defined in terms of SITC, Revision 3* published in 1986 by the United Nations. There are some discontinuities at detailed levels, particularly between capital and intermediate goods where some products are allocated from January 2007 to intermediate goods rather than capital goods. It is also possible that volume and price changes between 2006 and 2007 may be less reliable than usual.
9. Trade in gold is reported to HMRC but is excluded from the statistics of total exports and imports published in the Overseas Trade Statistics. However, trade in ores and concentrates and finished manufactures of gold (for example, jewellery) are included in total exports and imports.
10. In this publication, 'oil' means petroleum and petroleum products (SITC Division 33). The tonnages of crude oil exported and imported cannot be directly compared with those originating from the Department of Energy and Climate Change, which are compiled from data provided direct from oil companies and published in *Monthly Digest of Statistics* and *Energy Trends*. The average value per tonne may reflect not only changes in price but also changes in the commodity mix and this is particularly true for imports.
11. In the context of the short-term statistics, trade in ships (including drilling or production platforms), aircraft, precious stones and silver can be regarded as erratic because of the large value of individual shipments. Precious stones are classified to SITC Division 66, silver to Division 68 and the other erratic items to Division 79.
12. Two more countries joined the EU from 1 January 2007. These countries are Bulgaria and Romania. In order to enable users to make long-run comparisons, data for the new definition EU and non-EU was produced from January 1998 onwards for value, and from January 1999 onwards for volume and price indices. At the same time data for the old definitions is no longer being maintained. There are additional series for country groupings on the old definitions. The coverage of EMU countries was extended to include Slovenia. From January 2008, the coverage of EMU countries was extended to cover Cyprus and Malta, and from January 2009 the coverage of EMU countries has been extended to cover Slovakia. Data collected in the Overseas Trade Statistics have been combined for the United States and Puerto Rico, and for Dubai, Abu Dhabi and Sharjah (the United Arab Emirates) from January 2009 onwards.

Combined estimates have been included in this publication but estimates are still available for the United States and Dubai separately up to the end of 2008 on request. Some EU and non-EU breakdowns of commodity data for Chained Volume Measures which are available from the Time Series Data service may be less reliable than the current price data. Please consult Marilyn Thomas on 01633 455708 if you are considering using them.

Seasonal adjustment

13. The monthly trade in goods figures published by ONS are on a seasonally adjusted basis. Series for the value of trade in goods and the volume indices are seasonally adjusted independently. Research suggests little evidence of seasonality in the price indices. The seasonally adjusted series for total trade in goods are derived by summing or weighting together major commodity components. Full seasonal adjustment runs are carried out each month using the latest data to estimate the seasonal factors for the current month and re-estimate those for the immediately preceding month. It follows that there will be some revision to the previous month's estimates when the current month's are published. In common with other parts of ONS, the seasonal adjustment package used is X12ARIMA developed and maintained by the US Census Bureau.
14. HM Revenue & Customs National Export System (NES), which replaced manual (paper) Customs declarations with electronic submissions from the beginning of 2003, requires electronic messages from the trade once the goods have been exported in order to provide the departure date. In the absence of those messages being input initially, some non-EU exports had been allocated to the incorrect month. This was addressed by HMRC implementing a change to the processing rules. Because of these problems, ONS made adjustments to the trade statistics to better reflect the flow of exports to non-EU countries during the period January–November 2003.

Price and volume indices

15. The indicators of price movement ('deflators') for individual commodities used in the calculation of price and volume indices are based where possible on export price indices (EPIs) and import price indices (IPIs) directly collected by ONS from UK manufacturers. For certain commodities which are traded on world markets, price information on these markets is used for both imports and exports.

Revisions

16. The data in this release are subject to revisions following the ONS National Accounts Revision Policy. This can be found at: www.statistics.gov.uk/CCI/article.asp?ID=1187
17. Most revisions to the trade in goods figures are small in relation to the variability of the series. The monthly estimates for trade in goods with non-EU countries are revised when the following month's figures are first published, to reflect adjustments to the OTS data and revisions to the previous month's seasonal factors. Because of the Intrastat system, there is a need to revise the EU estimates over a longer period of time. However, it is ONS policy to minimise the frequency with which revisions are published as far as is sensible.

Rounding

18. Figures on a Balance of Payments basis are adjusted to ensure arithmetical consistency, in line with conventions used in the National Accounts. Index numbers are rounded to the nearest whole number or (for the highest-level aggregates) to one place of decimals.

Related data

19. With the exception of the international comparisons shown in table G4, all trade in goods information in this publication is consistent with the Balance of Payments, although the conversion of the data from an OTS basis is less certain at the lower levels of aggregation. Tables containing this more detailed information have been annotated 'BoP-consistent basis', whereas the tables showing the more soundly based data have been annotated 'BoP basis'.
20. Detailed OTS figures appear in various publications issued by The Stationery Office on behalf of HM Revenue & Customs. These publications provide detailed commodity level data as well as breakdowns by country and area. Information on trade in goods with both EU and non-EU countries can also be obtained at www.uktradeinfo.com

Further information

A paper entitled *Statistics on Trade in Goods* (GSS Methodological Series No. 36) gives comprehensive explanations of the bases on which trade in goods statistics are compiled, available on the ONS website at: www.statistics.gov.uk/StatBase/Product.asp?vlnk=14943.
