

DEPARTMENT OF ENERGY

# ENERGY TRENDS

A Statistical Bulletin

June 1975

## Consumption figures for April

### Total energy

Total inland energy consumption (primary fuel input basis) in April, measured at a weekly average rate was slightly lower than in March. (Weekly rates remove the effect of different numbers of days in different months). However when adjusted for seasonality and the effects of temperature and measured at an annual rate, consumption during the month was higher than in any month since last October. However, too much should not be read into one month's figures. Within the total, oil climbed back to 1974 levels after two very low months, whilst coal consumption remained at about the level of the early months of the year.

### Coal

Deep-mined coal production during May, measured at a weekly average rate, although higher than in April was substantially lower than in the two preceding months. Productivity in terms of output per man-shift remained at a similar level to that of recent months. Recruitment fell substantially but still exceeded wastage so that there was a small net increase in the number of men employed.

Coal consumption declined from recent high levels and consequently both undistributed and distributed stocks increased in spite of the relatively poor production rates. Power station stocks rose by nearly 1.2 million tons and undistributed stocks held by the National Coal Board increased by 0.5 million tons.

### Gas

Gas sent out in April was nearly 10 per cent higher than in April 1974. After allowing for lower power station use this represents an increase in supplies of about 12 per cent to other markets.

### Electricity

Total electricity supplied in April fell seasonally but was 5½ per cent higher than in the corresponding month of last year. In April 1974 however, industry in general had not fully recovered from the effects of short time working.

Oil consumption at power stations in April was nearly 12 per cent lower than in April 1974, but the proportion of oil in total fuel consumption rose slightly compared with the two previous months.

### Petroleum

Inland deliveries of petroleum products in April, although 1½ per cent lower than in April 1974, approached much more closely to last year's level of demand than was the case in the first three months of the year when total deliveries on average were down by more than 10 per cent.

Much of the higher demand was concentrated in the oils used for central heating — burning oil and gas/diesel oil — and on fuel-oil, and may be due to the replenishing of consumers' depleted stock levels rather than an increase in the underlying demand for these products. Motor spirit and DERV deliveries were also higher than in April last year and over the first four months of the year motor spirit deliveries were virtually the same as in the corresponding period of 1974.

Refineries continued to operate at low levels in April with output of 6.9 million tons of finished products, about two million tons lower than a year ago. Stocks held by oil companies rose to 21.9 million tons, the equivalent of 111 days' supply at forecast consumption levels.

Net arrivals of crude oil in March were 6.4 million tons, a million tons less than in the previous month and nearly four million tons less than in March 1974.

This Bulletin is prepared by the Economics and Statistics Division of the Department of Energy. Further copies of the Bulletin may be obtained from:

Information Division, Department of Energy,  
Room 1260, Thames House South,  
Millbank, London SW1P 4QJ.

Figures for the latest periods and the corresponding cumulative totals are provisional and are liable to subsequent revision.

There may be differences between the sum of constituent items and totals due to rounding. Percentage changes are calculated from unrounded figures but are shown only as (+) or (-) when the percentage change is very large.

All figures relate to the United Kingdom unless otherwise specified.

# Total energy

Definitions of the terms used in these tables may be found in the *Digest of United Kingdom Energy Statistics, 1974*.

The figures for November 1973 to March 1974, are progressively affected by the coal miners' overtime ban, their subsequent national strike, and by restrictions on fuel use. Cumulative totals and comparisons are also affected by these factors.

1 Public supply electricity and railway and transport power stations. 2 Prior to October 1973 the figures relate to actual consumption.

3 Prior to April 1973 the figures relate to merchants' disposals to the domestic market. 4 Including miners' coal.

5 Including coal used for transport purposes and shipments to the Channel Islands.

TABLE 8. Stocks of coal<sup>1</sup> in Great Britain: at end of period

Thousand tons

	Total	Distributed					Undistributed		
		Total distributed stocks	Power stations	Gas works	Coke ovens	Miscellaneous	Total undistributed stocks	Opencast sites and central stocking grounds	Collieries

1 Including products not shown separately. 2 Excluding refinery consumption.

TABLE 17. Stocks of oil at end of month

	Held by oil companies <sup>1</sup>		Power stations <sup>2</sup>
	Million tons	Estimated days' supply <sup>3</sup>	Million tons
1974 Mar	20.5	85	0.83
Apr	22.1	100	0.85
May	23.6	109	0.84
1975 Mar	22.0	96	0.84
Apr	21.7	106	0.85
May	21.9	111	0.80

1 Includes stocks of the product equivalent of crude and process oils held at the refineries and products at various stages in the distribution system.  
2 Fuel oil held at main oil burning stations in Great Britain.  
3 Calculated on actual or forecast deliveries for the ensuing months.
